

What you don't see could harm you!

Sewers can overflow into waterways during rainstorms, bringing harmful bacteria, which can make you sick.

To date, MSD has **reduced combined sewer overflows by 5.85 billion gallons** in a typical rainfall year. But there is more work to be done.

To be safe, you should avoid swimming, fishing, wading, and splashing in waterways during—and for 48 hours after—a rain event.

Wash with warm, soapy water if you contact water that a sewage overflow may have contaminated.
