

PLAY IT SAFE

WHAT YOU DON'T SEE
COULD HARM YOU!

When it rains, bacteria from sewage overflows, pet waste, pollutants from lawn treatment, oil and grease from automobiles, and litter gets washed into our waterways. Pollutant levels often don't drop for several days after the rain stops.

During and for 48 hours after rain storms have ended, you should:

- Minimize contact with waterways and avoid swimming, fishing, and wading in water.
- Wash your hands thoroughly with warm soapy water if contact is made with water bodies.
- Recognize and follow instructions on MSD warning signs.
