Subject: Annual Report
July 1, 2016 through June 30, 2017
Civil Action No. 3:08-cv-00608-CRS
DOJ Case No. 90-5-1-1-08254

Attention Director and Chiefs:

Please find attached our Annual Report, prepared in accordance with Paragraph 30 of our Amended Consent Decree. This report is for the period July 1, 2016, through June 30, 2017.

I certify under penalty of law that this document and all attachments were prepared under our direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering such information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

If you have questions or need additional information, please contact me at (502) 540-6136.

Sincerely,

W. Bin Bf

For Angela Akridge, PE
MSD Chief Engineer

Louisville and Jefferson County Wet Weather Consent Decree Annual Report

Reporting Period:
July 1, 2016 through June 30, 2017

Submitted To:
Kentucky Department of Environmental Protection
United States Environmental Protection Agency
United States Department of Justice

Submitted By:
Louisville and Jefferson County Metropolitan Sewer District
700 W. Liberty Street
Louisville, Kentucky 40203-1911

Submittal Date:
December 30, 2017

INTRODUCTION

The Louisville and Jefferson County Metropolitan Sewer District (MSD) has entered into an Amended Consent Decree with the Kentucky Department of Environmental Protection (KDEP) and the United States Environmental Protection Agency (EPA). The Amended Consent Decree was signed by United States District Judge Simpson on April 10, 2009, and filed in United States District Court, Western Division of Kentucky, Louisville Division, on April 15, 2009.

This is the twelfth Annual Report submitted in accordance with Paragraph 30 of the Amended Consent Decree. This report covers the time period from July 1, 2016, through June 30, 2017, and references data presented in Quarterly Reports 44 through 47. The structure for this report is outlined as follows:

Section 1: Project WIN Performance Overview – This section provides an accounting of the number of overflow occurrences, including unauthorized discharges from the separate sanitary sewer and combined sewer system, and the estimated volumes of each. A discussion of the probable reductions that are expected as a result of MSD's projects and activities during the reporting period is also contained in this section. These include both unauthorized discharge points and the discharges from MSD's Combined Sewer Overflow (CSO) locations, as identified in the Morris Forman Water Quality Treatment Center (WQTC) Kentucky Pollutant Discharge Elimination System (KPDES) permit.

Section 2: Program Activities for Nine Minimum Controls – This section describes the scope, schedule and status for projects and other activities that were active during the reporting period, as well as the anticipated projects and activities scheduled to be performed during the next reporting period (July 1, 2017, through June 30, 2018) for continued compliance with the Amended Consent Decree.

Section 3: Program Activities for Sewer Overflow Response Protocol – This section describes the scope, schedule and status for activities that were active during the reporting period, and the anticipated activities that are scheduled to be performed during the next reporting period for continued compliance with the Amended Consent Decree.

Section 4: Program Activities for Discharge Abatement Plans – This section describes the scope, schedule and status for projects and other activities that were active during the reporting period, as well as the anticipated projects and activities that are scheduled to be performed during the next reporting period for continued compliance with the Amended Consent Decree.

Section 5: Public Outreach, Education, Notification and Participation – This section describes the activities related to public outreach, education, notification and participation that were active during the reporting period, and the anticipated activities that are scheduled to be performed during the next reporting period for continued compliance with the Amended Consent Decree.

Section 6: Capacity Management Operations and Maintenance Report – The program activities performed during the reporting period, and activities planned for the next reporting period are included in this section for continued compliance with the Amended Consent Decree.

This Page Has Been Left Intentionally Blank

SECTION 1: PROJECT WIN PERFORMANCE OVERVIEW

This section presents an overview of IOAP progress during the reporting period as well as performance measures related to permit compliance, discharges, and other related data.

1.1. COMBINED SEWER OVERFLOW REDUCTION AND SANITARY SEWER OVERFLOW ABATEMENT ACTIVITIES

The following sections outline the activities performed during the reporting period to reduce or control Combined Sewer Overflow (CSOs) and eliminate Sanitary Sewer Overflows (SSOs).

1.1.1 COMBINED SEWER OVERFLOW REDUCTION AND CONTROL ACTIVITIES

MSD completed two IOAP projects during the reporting period that mitigated permitted CSOs, as detailed in Table 1.1.

Table 1.1. FY17 Combined Sewer Overflow Reduction and Control Activities

PROJECT	CERTIFIED COMPLETION DATE	LEVEL OF CONTROL (TYPICAL YEAR)
Story Ave & Spring Street Green Infrastructure Controls	December 20, 2016	8
Nightingale Pump Station Replacement & Storage	June 29, 2017	0

The Annual Average Overflow Volume (AAOV), derived from the InfoWorks CSO hydraulic model, includes the modeled AAOV for the permitted CSOs and is included as Appendix B. The observed CSO data for the reporting period for each monitored overflow has been tabulated, along with rainfall information from the nearest rain gauge, to facilitate review of the overflows that occurred, and is included as Appendix C.

Refer to Section 4.3 for comprehensive project certification listing. Refer to Section 4.5 for information regarding system monitoring and performance.

1.1.2 SANITARY SEWER OVERFLOW ELIMINATION ACTIVITIES

MSD completed three IOAP projects during the reporting period that eliminated SSOs, as detailed in Table 1.2.

Estimation of SSO volume is not available in the same manner as it is for the CSO locations. The SSO volume reductions are estimates based on actual observations or from flow monitoring information.

Refer to Section 4.2 for comprehensive project certification listing. Refer to Section 4.5 for information regarding system monitoring and performance. Refer to Appendix D for a listing of discharges.

Table 1.2. FY17 Sanitary Sewer Overflow Elimination Activities

PROJECT	CERTIFIED COMPLETION DATE	ASSOCIATED SSOS
Caven Ave Pump Station Elimination	September 26, 2016	17724, 27116, 61667, 61687, MSD0133-PS
Anchor Estates Pump Station Eliminations 2 – Anchor Estates #1 and #2 Pump Station Eliminations	September 30, 2016	00056-W, MSD0057-LS
Prospect #3 - ORFM System Improvements	December 19, 2016	22436, 40870, 40871, 40872, 42680, 65633, 65635, MSD0123-PS, MSD0183-PS, MSD0192-PS, MSD0193-PS, MSD1063-PS

1.2. PERFORMANCE MEASURES

MSD has developed performance measures to monitor the operation of the collections system and WQTCs, with the goal of reducing sewer overflows and improving surface water quality. The data reported in this document is the best, most up-to-date data available as of the document date. There may be changes to historic data as the data is reviewed for quality and accuracy and updated on a continuous basis by MSD administrative and field staff.

1.2.1 SYSTEMWIDE PERFORMANCE

1.2.1.1. RAINFALL

The number and the volume of wet weather overflows are directly related to the amount of rain that has fallen during the reporting period. Five new rain gauges have been installed by MSD during the reporting period, bringing the total network to 41 rain gauges, as shown in Figure 1.1. Nine gauges are located within Indiana, four within adjacent Kentucky counties and the remaining 28 are within Jefferson County. MSD plans to continue to expand the rain gauge network as appropriate sites are identified.

Figure 1.1. MSD Rain Gauge Network

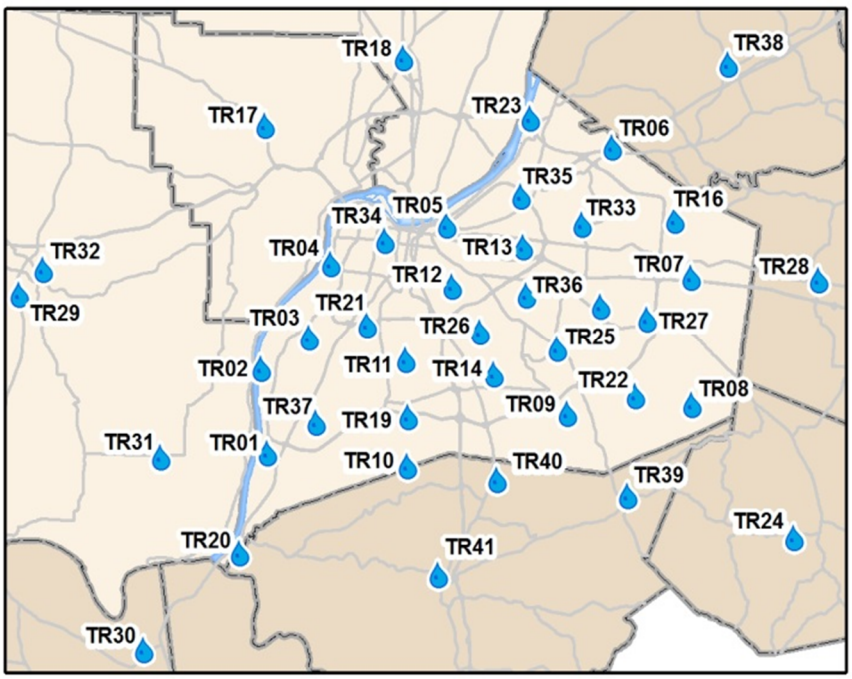

Figure 1.2 shows the Jefferson County average daily rainfall amounts by month for the reporting period, based on the

monthly average of all MSD rain gauges, compared with the average since FY08. Figure 1.3 presents the same data as an average monthly rainfall amount by month and fiscal year. These figures show that while the total rainfall for the year was slightly below the average annual rainfall since FY08, FY17 had significantly higher than average rainfall in August, and slightly higher than average rainfall in July, December, January, and May. The discharge data reflects this occurrence.

Figure 1.2. Daily Average Rainfall by Month

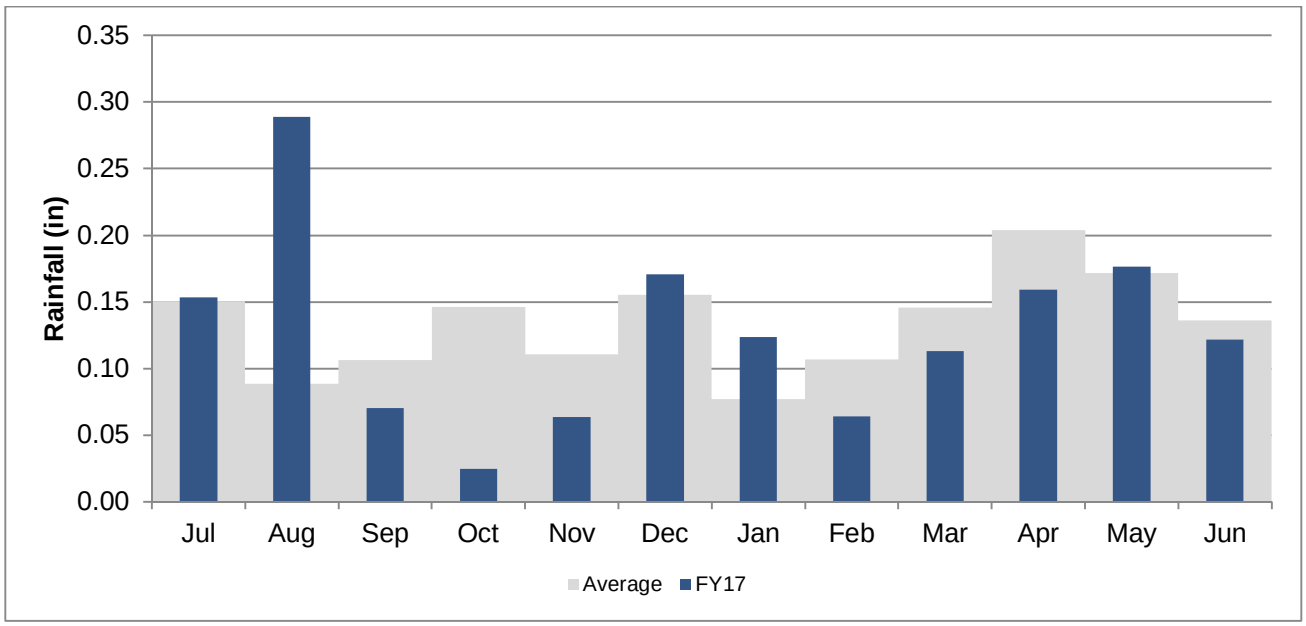

Figure 1.3. Monthly Average Rainfall by Fiscal Year

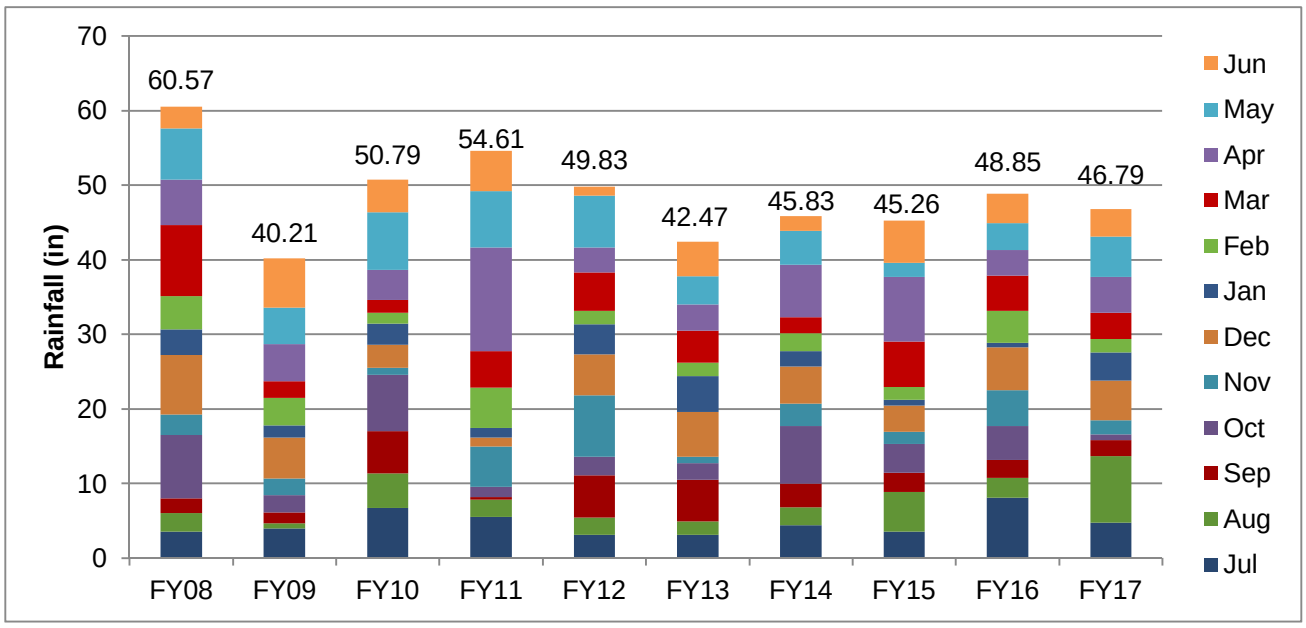

1.2.1.2. DISCHARGES

MSD enters and maintains information related to discharges and overflows that are observed by MSD staff in the Hansen Information Management System (Hansen) utilizing procedures reviewed and improved through efforts associated with components of the Sewer Overflow Response Protocol (SORP), as required under the Amended Consent Decree. These discharges are categorized using the following categories:

- Asset Type
    - Water Quality Treatment Center (WQTC)
    - Combined Sewer Overflow (CSO)
    - Collections System Assets associated with a Sanitary Sewer Overflow (SSO)
        - Pump Stations –sanitary, flood and viaduct pump stations
        - Access Points – manholes, valves and inlets
        - Mains – sanitary and combined system mains
        - Service Connections – customer service lines
- Weather – Dry or wet
- Result – Waters of the United States (WUS), Exterior (i.e., to the ground), or Interior (i.e., inside a building)
- Problem – The issue that caused the discharge, including the following groups:
    - Bypass / Upset at a WQTC (or Blending at Jeffersontown WQTC, for discharges that occurred prior to WQTC elimination) as defined by permit
    - Capacity – Lack of Capacity or Pumped Overflow during wet weather
    - Maintenance & Operations Issue – Electrical Problem at MSD, Grease Blockage, Mechanical Failure, Obstruction (Not Grease or Roots), Power Outage, Pumped due to USACE Manual Requirements, Roots, Structural Issue, or Utility Damage

Unauthorized discharges to the Waters of the United States (WUS) have been reported to the Kentucky Department of Environment Protection (KDEP) and the Environmental Protection Agency (EPA) per the approved SORP. Overflows to the ground and backups into buildings are reported in the Consent Decree Annual Report. All overflow reporting documentation is stored in MSD's asset management system, Hansen.

Table 1.3 details the observed discharges by weather and result since FY08. Appendix D includes information related to MSD's observed unauthorized discharges and overflows for the reporting period. During the upcoming reporting period, this data will be reviewed to determine if anomalies are present and if additional quality control or process improvements are warranted.

Discharges at permitted CSO locations that are observed by telemetry only are recorded with MSD's flow monitoring data and included in Appendix C.

Table 1.3. Observed Discharges by Weather and Result - All Assets

FY	UNAUTHORIZED DISCHARGE - WATERS OF US		OVERFLOW TO INTERIOR		OVERFLOW TO EXTERIOR (GROUND)	
	DRY WEATHER	WET WEATHER	DRY WEATHER	WET WEATHER	DRY WEATHER	WET WEATHER
FY08	42	552	122	692	42	21
FY09	64	129	154	147	61	9
FY10	47	394	151	706	48	21
FY11	44	789	171	609	62	28
FY12	43	494	141	106	48	20
FY13	27	296	127	38	37	5
FY14	38	416	127	130	26	7
FY15	38	422	763	305	82	24
FY16	32	335	86	83	39	17
FY17	29	76	272	8	69	6

1.2.2 WATER QUALITY TREATMENT CENTER PERFORMANCE

The following sections summarize performance compliance measures and trends at the water quality treatment centers (WQTCs) for the reporting period, including overflows attributed to the WQTC asset, bypasses, and effluent parameter exceedances.

1.2.2.1. OVERFLOWS TO THE EXTERIOR

Table 1.4 and Figure 1.4 detail the observed discharges by weather since FY08 at all WQTCs from manholes "within the fence" at the WQTCs. The decreasing trend in number of discharges can in part be attributed to reduction in number of operational WQTCs, discussed further in Section 1.2.2.5.4. Table 1.5 and Figure 1.5 show discharges by problem.

1.2.2.2. BYPASSES

Project WIN Quarterly Report 18 included a memorandum, included as Appendix K in that report, which described the analysis of 44 bypass events that occurred between July 1, 2008, and December 31, 2009. This analysis delineated bypasses into the four categories, including Capacity, External Power Failures, Equipment Failure (Mechanical, Electrical, or Structural), and Human Error. An assessment of bypasses is performed in each subsequent quarterly report to determine the root cause of each bypass, the failure category, corrective actions to be taken, possible programmatic solutions, and a corrective action completion date. Refer to quarterly reports for the reporting period for detailed analysis of bypasses.

Table 1.6 and Figure 1.6 show the WQTC bypass events by weather since FY08. Table 1.7 and Figure 1.7 show the WQTC bypass events by cause since FY09.

1.2.2.3. EXCEEDANCES

MSD's policy is to operate WQTCs in full compliance with the permitted effluent water quality standards. However, circumstances sometimes arise that may cause wastewater WQTCs to exceed the permitted effluent limits. This reality is recognized by the National Association of Clean Water Agencies (NACWA), which gives awards at different levels based on the number of effluent parameter exceedances during the calendar year:

- Silver – Five or fewer exceedances per year
- Gold – Zero exceedances per year
- Platinum – Zero exceedances per year for five years

Based on past operating history, MSD has established the target for all treatment centers of receiving at least the NACWA Silver Award. This goal is discussed in further detail under Sections 1.2.2.4.3 and 1.2.2.5.4 related to exceedances at Morris Forman WQTC and the regional WQTCs, respectively.

1.2.2.4. MORRIS FORMAN WATER QUALITY TREATMENT CENTER

Originally constructed in 1958, Morris Forman WQTC is MSD's largest, oldest WQTC. The following sections provide details related to this largest WQTC.

1.2.2.4.1. OVERFLOWS TO THE EXTERIOR

There were no overflows from manholes "within the fence" at the WQTC during the reporting period, as shown in Table 1.8 and Table 1.9.

Table 1.8. Observed Overflows to the Exterior by Weather – Morris Forman WQTC

1.2.2.4.2. BYPASSES

Four unauthorized wet weather bypasses occurred during the reporting period, as shown in Table 1.10 and Table 1.11. Three of the bypasses were caused by equipment failure (estimated 249,000 gallons total) and one was due to external power failure (estimated 9,100,000 gallons).

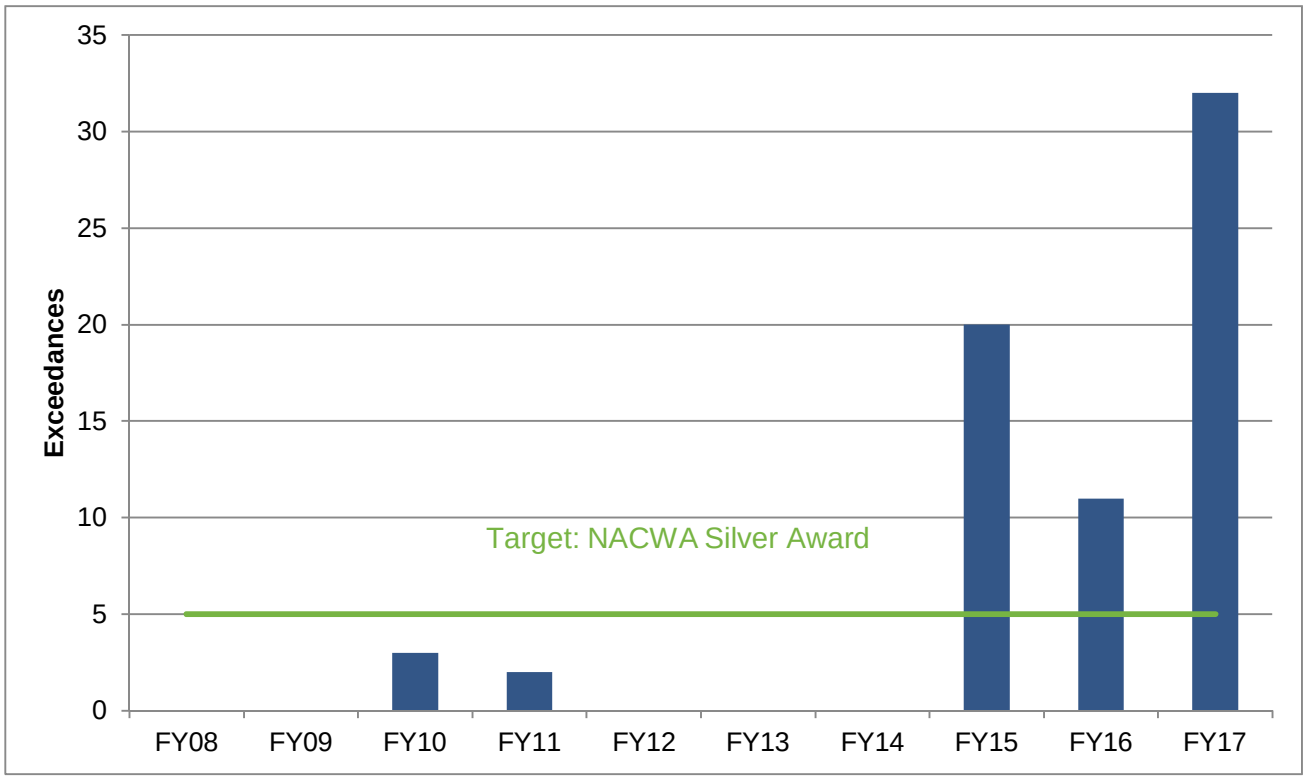
FY17	0	1	3	0

1.2.2.4.3. EXCEEDANCES

As shown in Figure 1.8, a total of 32 exceedances occurred at Morris Forman WQTC in FY17. Capital construction involving process area shutdowns and compromised solids processing capabilities contributed to the exceedances. Liquid oxygen was purchased to remediate until the new oxygen generation system went online in May 2017, at which point the WQTC showed improved compliance with monitored parameters.

Figure 1.8. Exceedances by Fiscal Year – Morris Forman WQTC



1.2.2.5. REGIONAL WATER QUALITY TREATMENT CENTERS

In December 2015, MSD successfully eliminated Jeffersontown WQTC, bringing the regional WQTC count to four. The following sections provide details related to the regional WQTCs.

1.2.2.5.1. OVERFLOWS TO THE EXTERIOR

Observed overflows from manholes "within the fence" at the WQTC during the reporting period are shown in Table 1.12 and Table 1.13.

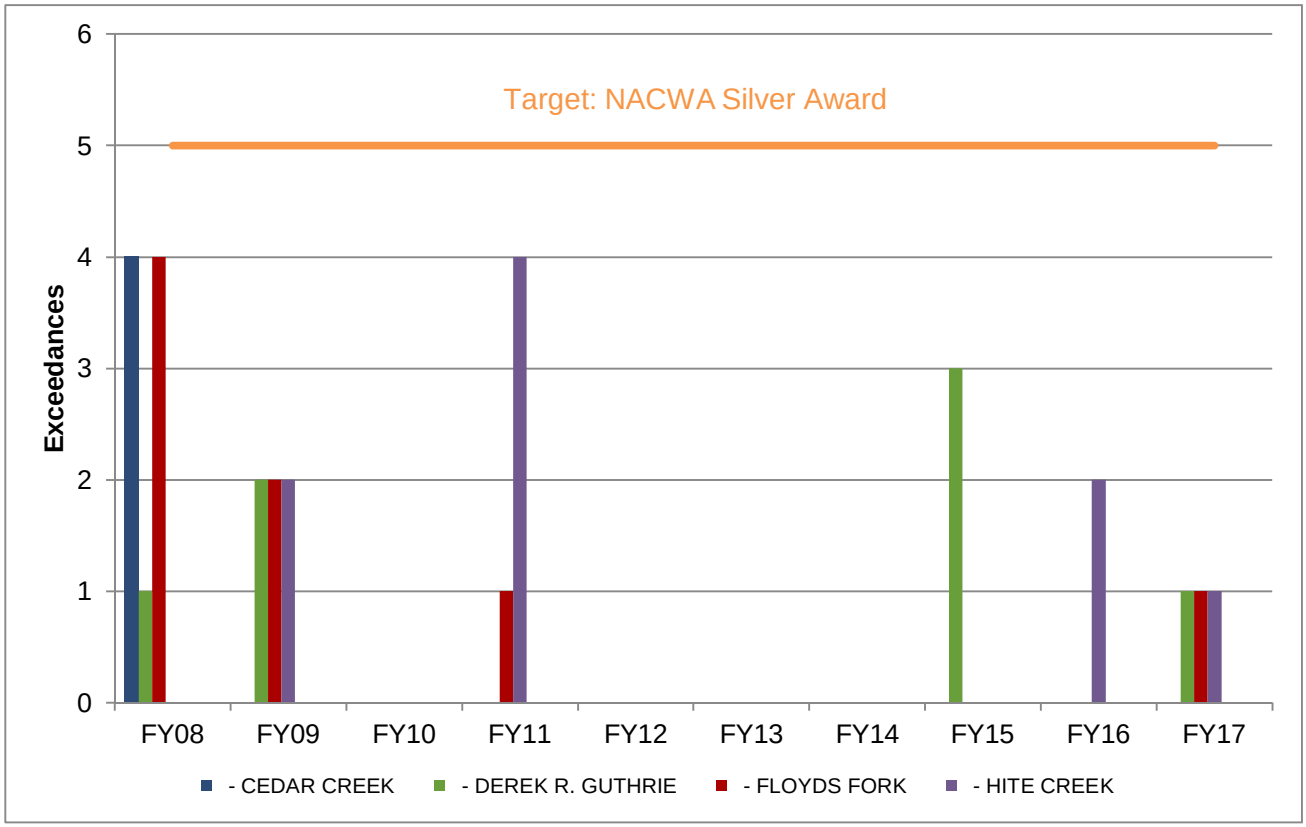
1.2.2.5.3. JEFFERSONTOWN WATER QUALITY TREATMENT CENTER

Jeffersontown WQTC is off-line as of December 2015, as detailed in Section 4.4.1.2. The FY16 Annual Report was the final annual report to include discussion of data at the siphon upstream of the headworks at Jeffersontown WQTC.

1.2.2.5.4. EXCEEDANCES

As shown in Figure 1.11, all four operational regional WQTCs have achieved the NACWA Silver Award goal since FY08. Cedar Creek WQTC meets the qualifications for the NACWA Platinum Award.

Figure 1.11. Exceedances by Fiscal Year – Regional WQTCs



1.2.2.6. NON-REGIONAL WQTCS

Since 1985, MSD has acquired and/or eliminated more than 300 privately owned non-regional WQTCs ("package plants"). The non-regional WQTCs typically had very limited operating flexibility, and were subject to high levels of variability in loads. Most of the non-regional WQTCs had been in operation over 35 years and typically had much poorer records of compliance compared to MSD's regional WQTCs. Therefore, MSD worked aggressively to eliminate the non-regional WQTCs. The last non-regional WQTC within the MSD service area was taken off-line on May 27, 2016. The FY16 Annual Report was the final annual report to include discussion of data associated with non-regional WQTCs. Should MSD acquire and/or eliminate any WQTCs in the future through service area expansion, their performance will be discussed here.

1.2.3 COMBINED SEWER OVERFLOW PERFORMANCE

1.2.3.1. AUTHORIZED DISCHARGES – WET WEATHER CSOs

At the end of the reporting period, MSD maintained 98 CSOs in operation. The modeled AAOV for the permitted CSOs is included as Appendix B. The observed CSO data for the reporting period for each monitored overflow has been tabulated, along with rainfall information from the nearest rain gauge, to facilitate review of the overflows that occurred, and is included as Appendix C. Refer to Section 4.5 for information regarding system monitoring and performance as CSO reduction projects are completed.

1.2.3.2. UNAUTHORIZED DISCHARGES – DRY WEATHER CSOs

MSD has implemented the Nine Minimum Controls (NMC) programs and provided resources to reduce dry weather CSOs as part of the CSO Long Term Control Plan (LTCP). During the reporting period, there were nine observed dry weather overflows from a permitted CSO location as detailed in Table 1.17. The dry weather CSOs were analyzed by location and problem to identify issues that can be corrected.

CSO151 accounted for four of the nine overflows due to several cubic yards of flowable fill entering the line from an upstream utility repair. The obstruction was first discovered April 11, 2017, during routine inspection of the CSO. Initial efforts through April 18, 2017, focused on removing the material from the bar screen and siphon to allow low flow to pass. MSD contractors have worked through the end of the reporting period to remove the material using non-invasive methods where possible. The work is anticipated to be completed by December 31, 2017.

Mechanical and electrical problems at CSOs 191 and 197 were addressed by repair or replacement of defective parts. MSD crews flushed the downstream line of CSO197 to clear the obstruction.

Table 1.18 and Figure 1.12 demonstrate that dry weather overflows continue to decrease significantly both in number and volume. At this time, the 98 CSOs are functioning properly.

Table 1.17. FY17 Dry Weather CSOs

DATE	CSO	PROBLEM	DESCRIPTION	VOLUME (GAL)

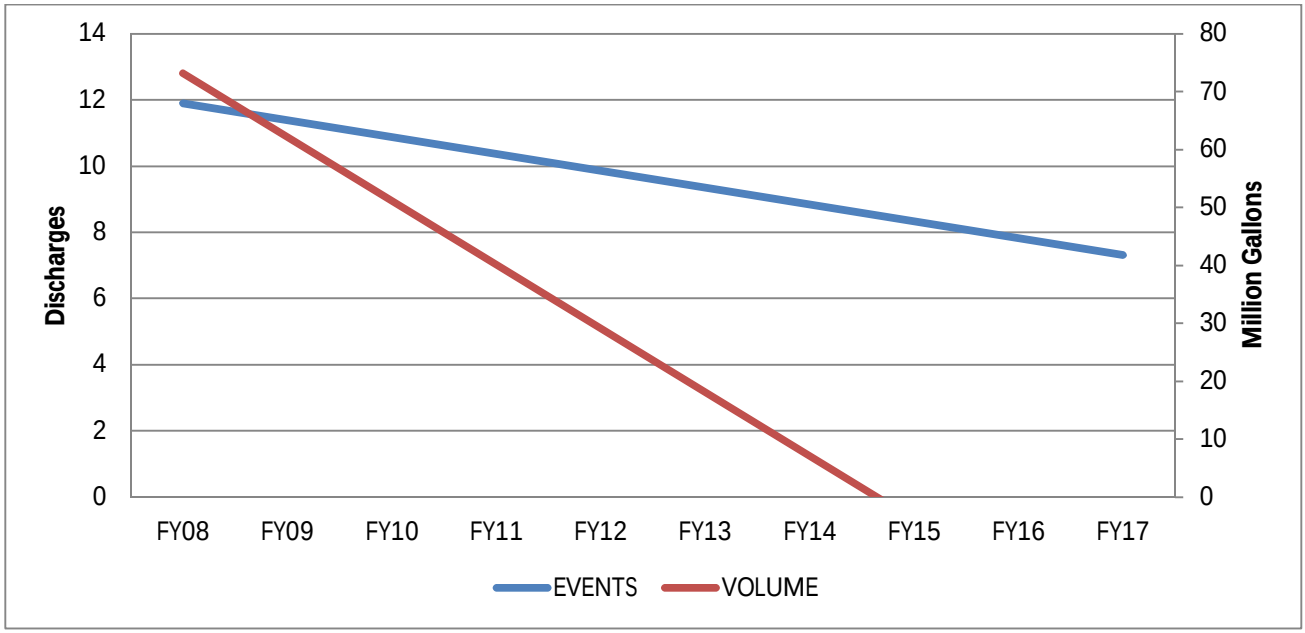
Figure 1.12. Trend of Dry Weather CSOs by Fiscal Year



1.2.3.3. CSO FLOW MONITORING QUALITY IMPROVEMENT

During the July 2016 – September 2016 reporting period, MSD identified a potential for inaccurate volume reporting at some CSOs. This was identified by comparing measured overflow volumes against modeled overflow volumes for similar storms. It was determined that several CSO flow monitors are affected by backwater levels from the receiving streams causing a discrepancy actual overflow volume, along with other potential variables at some locations. MSD notified EPA and KDEP of data discrepancies on September 29, 2016.

A workgroup was established to review CSO flow monitoring and resolve potential over-reporting of overflow volumes. Initial findings indicated that potentially significant discrepancies between modeling and monitoring data existed at 33 of MSD's 98 CSO locations. This set of 33 CSOs was the highest priority to review, correct data, document SOPs, and implement changes. For these CSO locations, MSD performed site visits including elevation surveys, performed detailed analysis, investigated equipment configurations, and investigated PLC programming or monitoring program logic. This has led to the development of an SOP for each CSO that describes the existing monitoring equipment, configuration, and flow calculation in use as of December 31, 2016, and evaluates the effectiveness of the existing setup. If a more effective arrangement was recommended, MSD added the proposed arrangement to the SOP for implementation and determined if historical data could be updated. In cases where the historical data could be updated, MSD has developed revised volumes for reporting. In some cases, historical volumes could not be recalculated based on the available data. For instance, CSOs influenced by river or creek elevation for which there was no available historic level data could not be recalculated for historical volumes but will be calculated or measured according to the revised SOPs as they are implemented.

To date, SOPs have been drafted and historical volume data corrections (where possible) have been made for all of the 33 initial CSO locations. These changes have also been made for two additional CSO locations included in the review due to interaction with priority CSOs. Multiple SOPs require programming or equipment changes in order to implement the final SOPs. During the upcoming reporting period, MSD will continue working to procure and replace equipment as required and update the programming at the PLC or with monitoring program logic, as summarized in Figure 1.13 to complete implementation of the SOPs.

The remaining 65 active CSO locations will be reviewed during the upcoming fiscal year. MSD has also identified two inactive sites with historic data that will be reviewed. MSD has developed a schedule for review of these sites and begin the analysis. Status for these remaining CSOs is summarized in Figure 1.14.

Until the review is complete, CSO flow monitoring data will continue to be included as an appendix to each quarterly report, will be listed as "Draft", and will include the statement "CSO data monitoring procedures are currently being revised". As changes are made to flow meter locations and or flow meter calculation algorithms, MSD will provide status updates in the quarterly reports on progress to evaluate data accuracy, revise monitoring data records, update monitoring procedures, and implement recommendations. CSO flow monitoring data reported quarterly will include updated volumes based on completion of the review and update of the reporting standards for each CSO. Any revised volumes for previous reporting periods up to and including FY16 for the 33 CSO locations initially reviewed are included in Appendix H, and revised volumes for FY17 are included with FY17 CSO flow monitoring for all CSO locations in Appendix C. Any subsequently developed revised volumes for previous reporting periods up to and including FY18 will be included in the appendices to the FY18 Consent Decree Annual Report.

Figure 1.13. CSO Flow Monitoring Quality Improvement Status – Phase 1

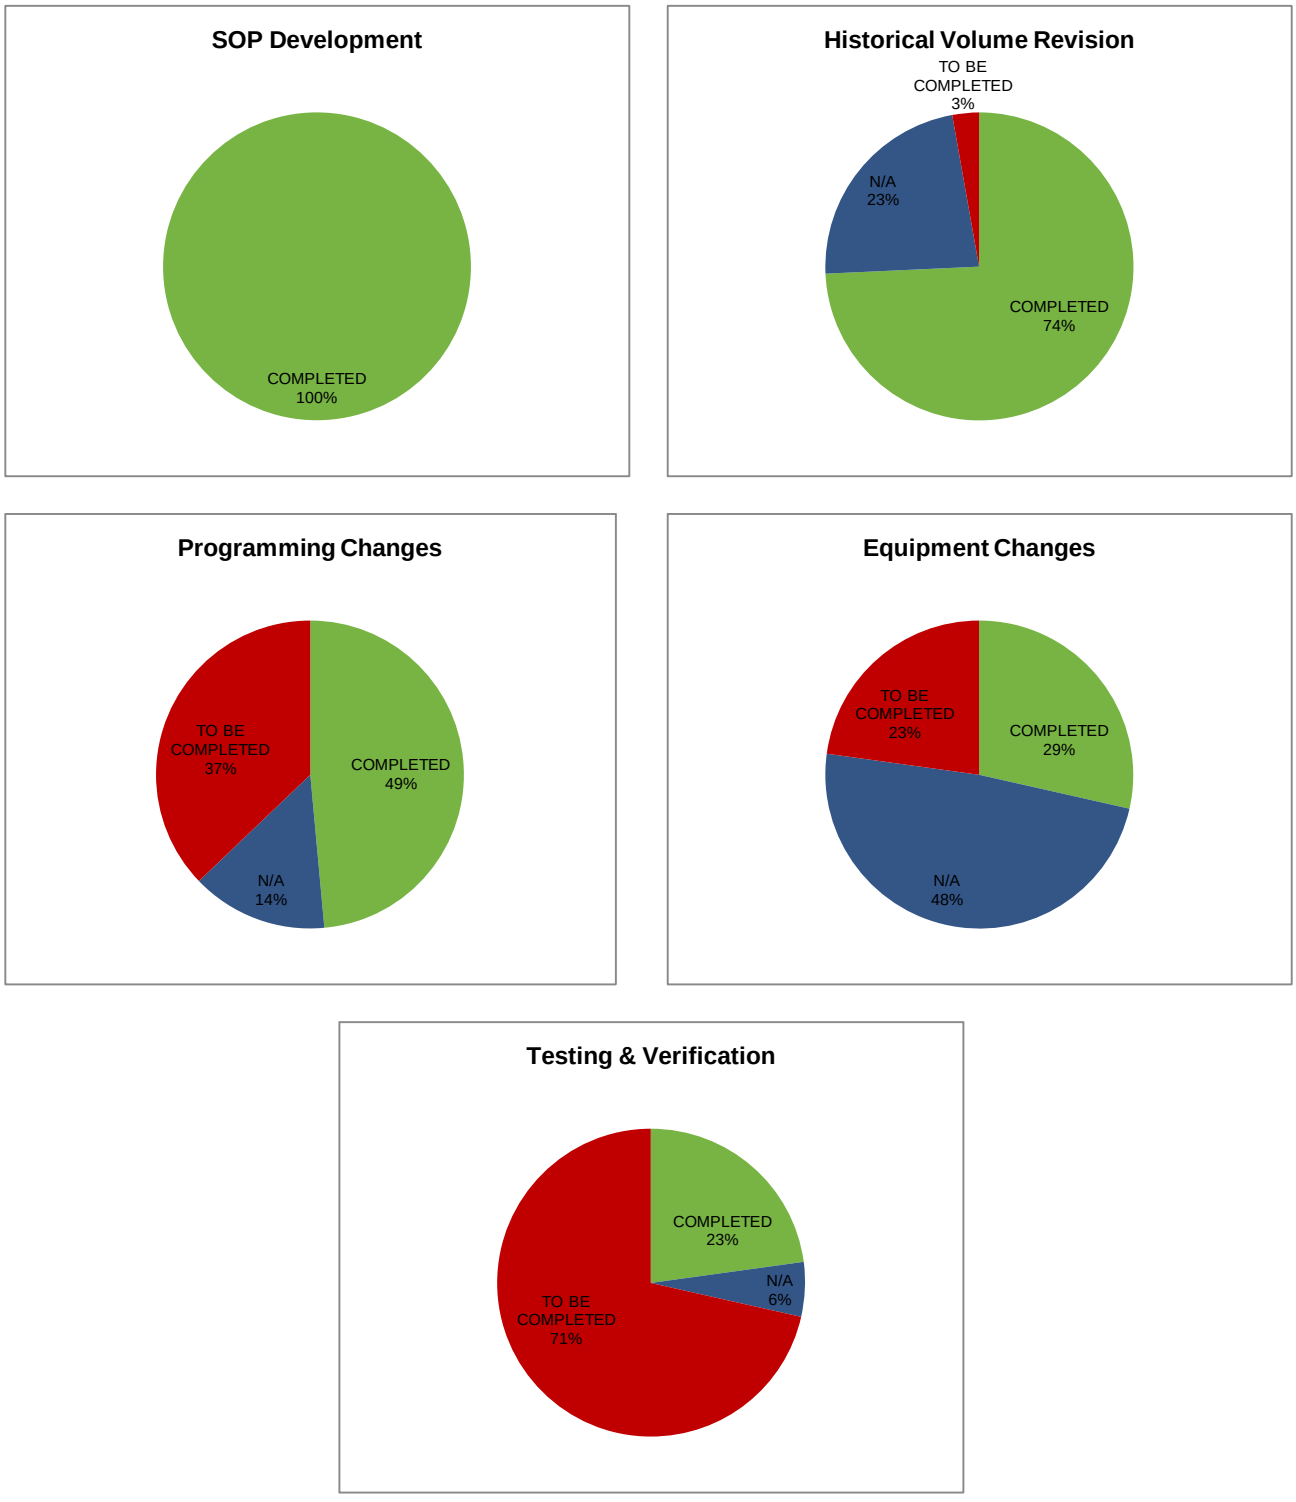


Figure 1.14. CSO Flow Monitoring Quality Improvement Status – Phase 2

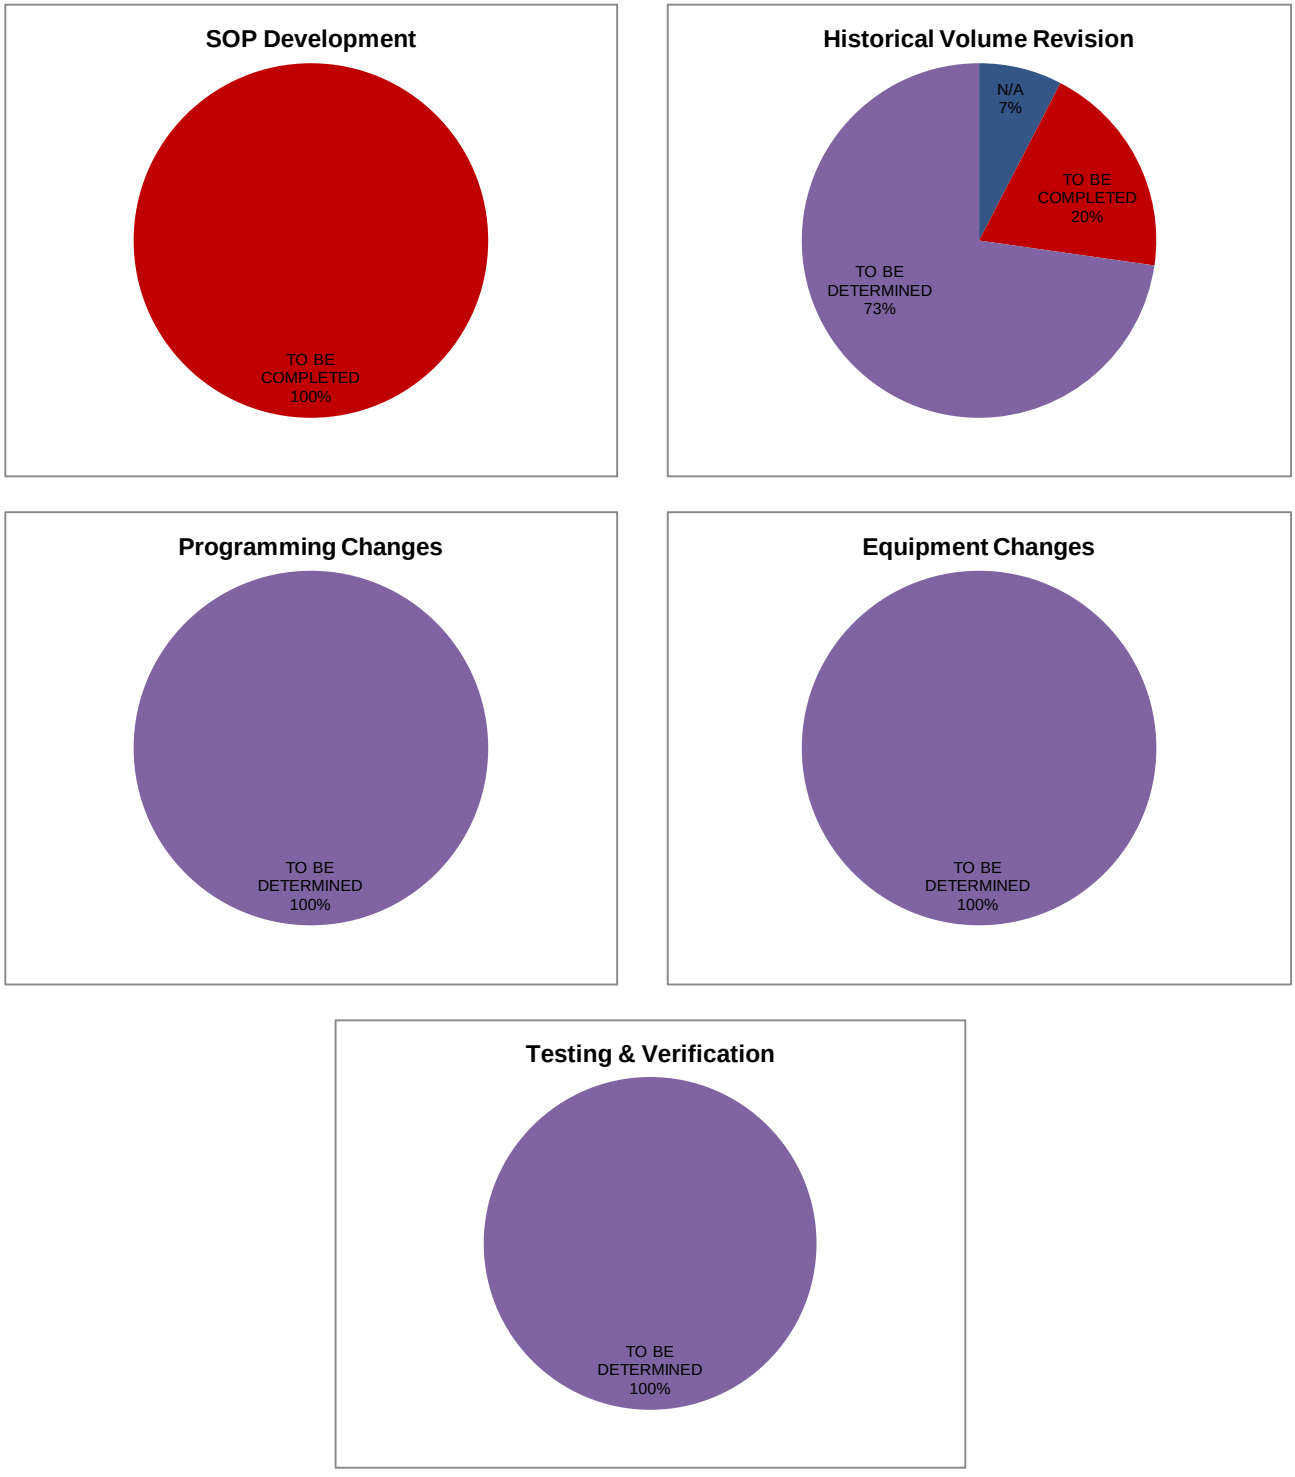

1.2.4 COLLECTIONS SYSTEM OVERFLOW PERFORMANCE

At the end of the reporting period, MSD maintained 3,322 miles of sanitary and combined sewer mains in operation, including associated pump stations, manholes and other access points, and service lines.

1.2.4.1. UNAUTHORIZED DISCHARGES TO WATERS OF US – WET WEATHER SSOS

Table 1.19 and Figure 1.15 detail unauthorized discharges to WUS from the collections system by cause.

Table 1.22 and Figure 1.18 detail wet weather overflows to the exterior from the collections system by cause. Table 1.23 and Figure 1.19 detail wet weather overflows to the exterior from the collections system by asset.

1.2.4.4. WET WEATHER HAULING EVENTS

To reduce the number of overflows in wet weather, MSD hauls sewage from multiple locations. MSD proactively monitors known and suspected locations that have wet weather capacity issues which may cause sewer line surcharging, basement back-ups, and sanitary sewer overflows (SSOs). MSD staff only hauls from these locations as necessary and as resources allow. Hauling efforts are summarized in Table 1.24 and Figure 1.20 by month and in Table 1.25 and Figure 1.21 by asset.

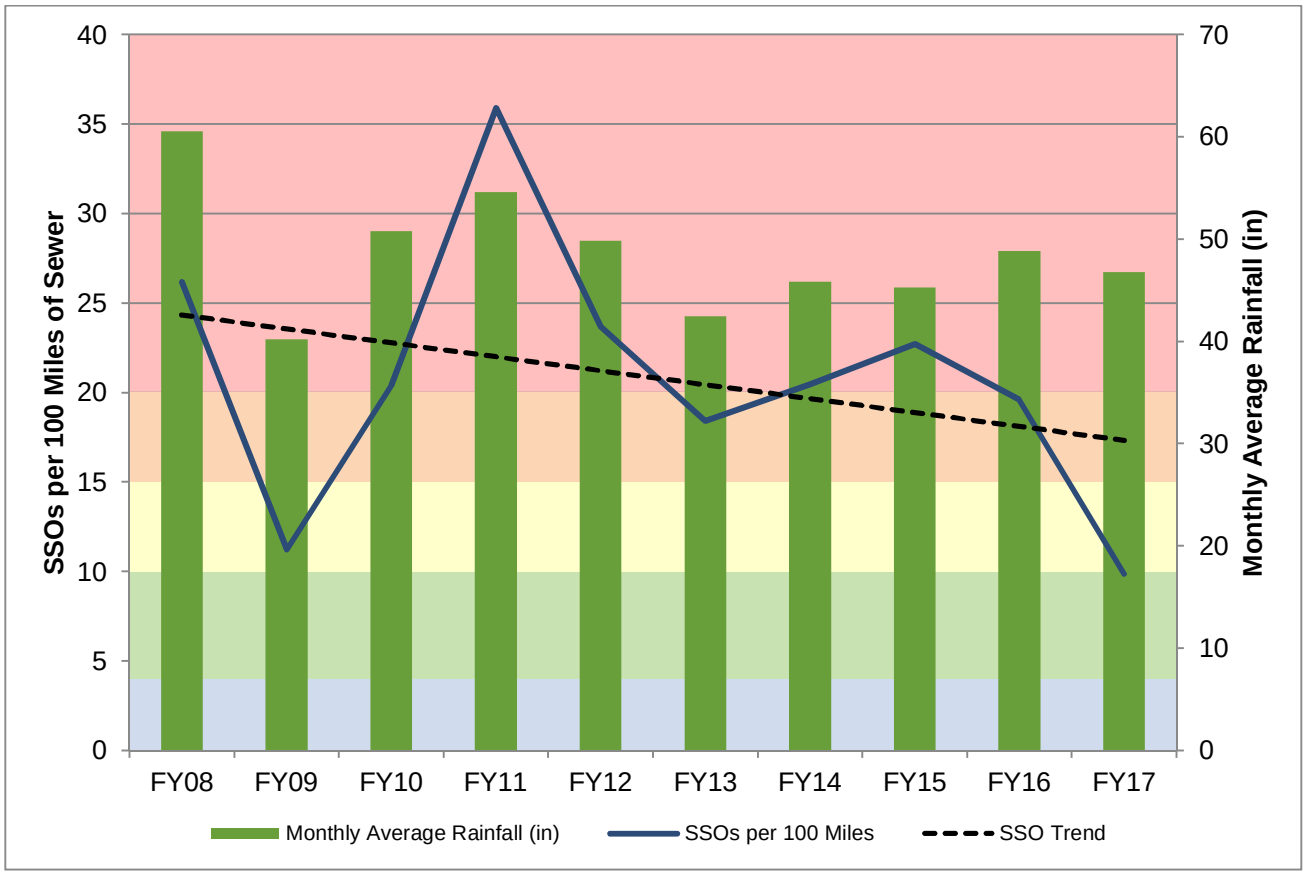
1.2.4.8. SSOs PER 100 MILES OF SEWER

Per the request of EPA, and in keeping with benchmarks from other utilities, MSD has prepared the following analysis of SSOs per 100 Miles of sewer by cause for FY17, as well as by year and compared to national benchmarks. The background shading on the following chart represents benchmarking from other utilities and EPA studies of overflows per 100 miles of sewer. Although overflow occurrences are significantly influenced by rainfall, it is shown that MSD is trending favorably against benchmarks, and efforts documented in this Annual Report (CMOM, SORP, CPE, Bypass Reviews, etc.) are proving effective at reducing overflows.

Figure 1.27. SSOs per 100 Miles of Sewer



This Page Has Been Left Intentionally Blank

SECTION 2: PROGRAM ACTIVITIES FOR NINE MINIMUM CONTROLS

2.1. NINE MINIMUM CONTROLS PROGRAM BACKGROUND

Per Paragraph 24.a. of the Amended Consent Decree, the Nine Minimum Controls (NMC) Compliance Report was initially submitted the Environmental Protection Agency (EPA) and to Kentucky Department of Environment Protection (KDEP) on February 10, 2006. MSD received an approval letter, dated February 22, 2007, for the NMC Compliance Report. The approved NMC Compliance document can be viewed on the MSD Project WIN website **www.msdlouky.org/projectwin**. Highlights of NMC program implementation are outlined below.

2.2. NMC 1: PROPER OPERATION AND MAINTENANCE PROGRAMS

FY17 Program

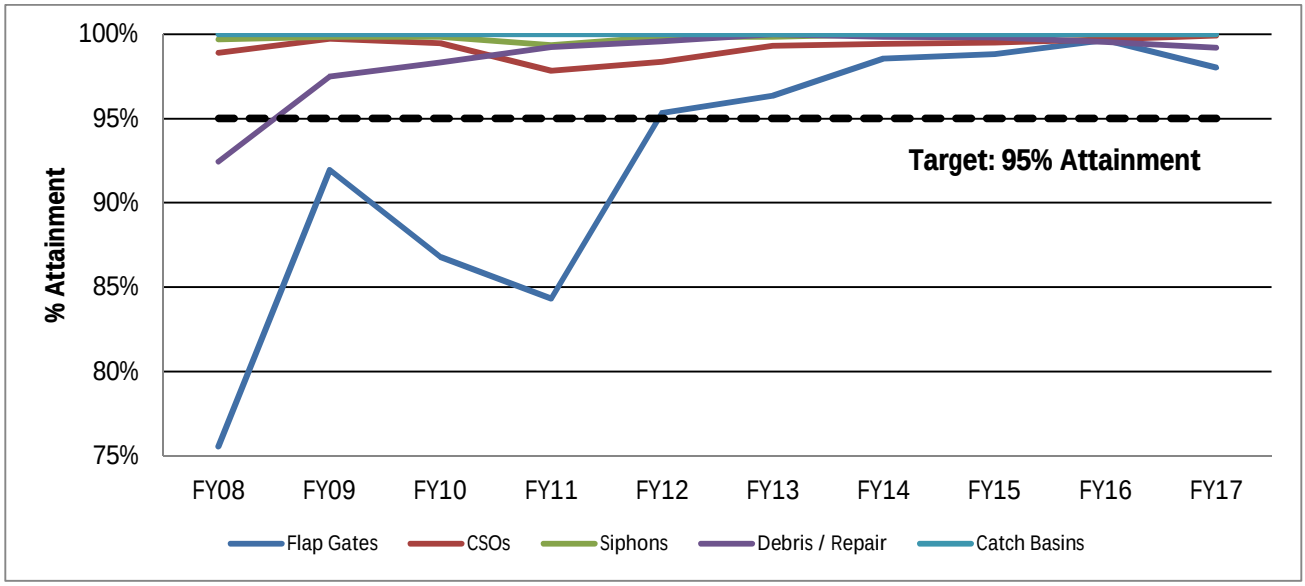
Program Implementation

- Inspected and cleaned 22,467 Catch Basins within the Combined Sewer System (CSS).
- Continued to inspect, maintain and properly operate the CSS pump stations and the Morris Forman Water Quality Treatment Center (WQTC).
- Performed 5,120 weekly inspections on Combined Sewer Overflows (CSOs), 1,029 creek inspections, 592 siphon inspections, and initiated 632 work orders for debris removal and/or repairs as determined to be necessary to allow proper system operation.
- Flushed 985 sewer line segments in the CSS, including 177,064 feet (33.5 miles) of sewer lines ranging in size from 6 inches to 54 inches. Performed formula-based PACP Television (TV) inspection on 900,154 feet (170.5 miles) of sewer lines, as part of the Gravity Line Preventive Maintenance (GLPM) program in the CSS.
- Chemically treated 390,059 feet (73.9 miles) of sanitary sewer for roots.
- Achieved the 95% attainment program goals listed below, as shown in Figure 2.1.
    - 100% of CSOs inspected weekly.
    - 98% of flap gates inspected weekly.
    - 100% of siphons inspected monthly.
    - 99% of Debris or Repair Work Orders on CSO assets created the next work day after the inspection of the asset and open for no more than 5 days.
    - 100% catch basins within the CSS cleaned every 15 months.

Annual Training

- Conducted CSO Field Training classes on March 3, 2017.

Figure 2.1. NMC 1 Programmatic Implementation Attainment



Annual Asset Review and Documentation

- Continued projects to create improved access to selected CSO sites to facilitate cleaning activities.
- Continued to review catch basin areas against the CSS area and explored re-alignment to confirm that regulatory commitments of cleaning on a 15-month cycle in the CSS are being achieved.

FY18 Program

Program Implementation

- Continue cleaning and inspection programs, and reporting on programmatic implementation goals.

Annual Training

- Incorporate the results of the annual field investigation to adjust and enhance the annual CSO Field Training modules.
- Schedule and conduct the annual CSO Field Training with the MSD Operations Division CSO/NMC staff and Morris Forman WQTC personnel.

Asset Review and Documentation

- Continue implementation of field verification efforts to determine operation and maintenance enhancements to be incorporated into annual training.
- Review the CSO inventory schematics and revise as necessary.
- Update the CSO characterization sheets to reflect the updated and calibrated hydraulic model.

2.3. NMC 2: MAXIMIZATION OF STORAGE IN THE COLLECTIONS SYSTEM

FY17 Program

Real Time Control (RTC) Optimization

- Continued operation of Phase 1 and 2 of the Real Time Control (RTC) system. During the reporting period, over 1,092 MG were stored in the system during rain events and routed to the Morris Forman WQTC once the system was able to handle the flow. See Figure 2.2 for a detailed report.
- Updated standard operating procedures (SOPs) for the Phase 1 and 2 facilities to reflect current operations and to incorporate adjustments for future RTC facilities.
- Continued review of CSOs upstream of Morris Forman WQTC, and noted that flow through the plant is optimized prior to overflows occurring, as shown in quarterly reports for the reporting period.
- Continued utilization of "RTC active storage" to standardize the calculation of the volume of flow stored during wet weather events by RTC facilities.
- Continued Csoft maintenance and service agreement contract with RTC consultant.
- Continued the integration of the InfoWorks Integrated Catchment Model (ICM) hydraulic model, ICM Exchange and Csoft Adjusted and stabilized the ICM RTC model; setup new RTC servers and computers; installed Csoft, ICM, and Gorubi problem solver software; tested runtimes and determined the required time step and control horizon for optimization; finalized Csoft configurations and began testing performance; and updated TAG scripting and began testing of data transfer using iFix software.

  Worked with the RTC consultant under RTC Phase 3 Integration to review, revise and begin implementing the draft wet weather SOP for the system that also includes the Southeast Diversion Structure, Buechel Basin, Northern Ditch Diversion, and the Derek R Guthrie WQTC Wet Weather treatment facility. Full integration in an automated mode will not be achieved until the RTC software (Csoft) is upgraded to the most current version and the hydraulic engine is converted to use MSD's InfoWorks ICM hydraulic model, which is expected to be completed during the next reporting period. While this work is being performed, the SOP is being implemented incrementally, starting with a period of manual operation to validate the control assumptions for each site, followed by increasing levels of system automation as the automated controls for individual components are implemented, validated, and then incorporated into the overall RTC system.
- Worked with the RTC consultant under the RTC Phase 4 Integration to develop updated SOPs for the Nightingale Pump Station (NPS), Southwestern Outfall Relief 1 (SWOR1), and Southwestern Pump Station (SWPS) sites to incorporate modifications to operations stemming from upgrades or the addition of new facilities and to develop preliminary SOPs for the Bells Lane Wet Weather Treatment Facility and the Logan Street and Breckenridge Street CSO Basin. The revised/new SOPs for these sites will be implemented incrementally, starting with a period of manual operation to validate the control assumptions for each site, followed by increasing levels of system automation as the automated controls for individual components are implemented, validated, and then incorporated into the overall RTC system.

- Continued to implement recommendations for improvements designed to optimize the utilization and performance of the existing RTC system. Additional improvements include the development of a module to interpret unknown TAG name alarms as mode 50 (short term communication failure) to reduce instances of RTC unavailability and evaluated an option to convert data transfers to an open platform communications (OPC) protocol to reduce instances of data not found alarms due to synchronization issues and delays in writing data from the local controllers.
- Completed a preliminary design report identifying option to improve operations of the Sneads Branch facility including options to eliminate the Sneads Branch screening and pumping facility by directing stored volumes of water to the Logan CSO basin. Geotechnical and survey work to confirm viability of the elimination options will be performed during the upcoming period.
- Completed design of a gate replacement and backup generator installation at the Ashland RTC facility to improve RTC operations and site reliability.
- Continued monitoring Southwestern Outfall Retention 2 (SWOR2) operations and developed simplified coding to reduce gate movements and improve site performance. A decision to implement the simplified coding will not be made until the upgraded SWPS and Bells Lane facility are integrated into RTC and the SWOR1 and Southwest Sluice Gate (SWSG) gate replacement and upgrades and completed. A design for the installation of a backup generator at the site was completed and the construction notice to proceed was issued in January 2017. Construction is ongoing.
- Integrated new rain gauges deployed by MSD into the RTC system to improve flow prediction and weather forecasting capabilities.

Storage Optimization

- Continued to monitor the performance of the CSO108 Dam Modification, a bending weir installed at CSO108. Modeling showed that additional storm water flow will need to be captured upstream in the CSO 108 sewershed to be directed to green infrastructure or a separate storm sewer system to reduce overflows to the prescribed level of control. Study is underway to identify the most cost-effective solution for implementation.
- Continued to monitor and review the performance of the RTC sites and systems, developing recommendations for improvements, and implementing these recommendations as needed to optimize the utilization and performance of the existing RTC system.
- Constructed a spring-loaded bending weir at CSO023. The proposed bending weir at CSO178 design was completed. CSO190 was evaluated and a dam raise was recommended and designed. Modeling efforts indicated a bending weir was not necessary because of the green infrastructure that has been constructed within the drainage area. Bending weirs and the associated solids and floatables controls were designed for CSOs 178 and 181. CSO 197 dam raise and solids and floatables controls design was completed in FY17. Additional evaluation of upstream conditions was conducted for all CSOs with dam raises to determine if any basements were at risk for flooding based on the revised dam height, and modifications were made as required.

Figure 2.2. Wet Weather Storage in the Morris Forman Sewer System via the RTC System

Louisville/Jefferson County Metropolitan Sewer District

WET WEATHER STORAGE IN THE MORRIS FORMAN SEWER SYSTEM AS MANAGED BY THE RTC SYSTEM

Period

TOTAL							291.99	173.07	138.26	185.85	27.48	237.65	38.40	1092.70		

* Average total rainfall depth based on rain gauges TR04, TR05, TR11, TR12, TR13, TR14 and TR15.

** Maximum total rainfall depth measurement and where it was recorded during the wet weather event.

*** The MDS is always controlled manually by the operators.

+ The capacity has been restricted since April 1, 2016 due to the damaged Gate 2 at SWSG. Due to this restriction, capacity has been reduced from 14.5 MG to 7.7 MG. Prior to implementation of RTC, the site could store 5.5 MG.

- The upgraded NPS was placed in service and began operating under manual and local control. The upgraded facility provides an increased pumping capacity and 7.7 MG of below-grade storage.

FY18 Program

RTC Optimization

- Continue to work with the RTC consultant under the RTC Phase 3 Integration to review, revise and implement wet weather SOP changes. On-line and off-line testing of Csoft 4 and integrated InfoWorks hydraulic model will occur. Once testing is successfully complete, full integration in an automated mode under Csoft 4 will begin. The Operations Division will continue to implement operational set point control changes for individual components and then incorporate programming into the overall RTC system.
- Integrate new rain gauges deployed by MSD into the RTC system to improve flow prediction and weather forecasting capabilities.
- Finalize SOPs for the NPS, SWOR1, and SWPS sites to incorporate modifications to operations stemming from upgrades or the addition of new facilities. The revised SOPs for these sites will be implemented incrementally as related construction is completed and the facilities are placed in service, beginning with a period of manual operation to validate the control assumptions for each site, followed by increasing levels of system automation as the automated controls for individual components are implemented, validated, and then incorporated into the overall RTC system.
- Finalize SOPs for the Bells Lane Wet Weather Treatment Facility and the Logan Street and Breckenridge Street CSO Basin. As construction is completed and the facilities are placed in service, the SOPs will be implemented incrementally, starting with a period of manual operation to validate the control assumptions for each site, followed by increasing levels of system automation as the automated controls for individual components are implemented, validated, and then incorporated into the overall RTC system.
- Prepare preliminary SOPs for the Southwestern Parkway and the Clifton Heights CSO Basins. The SOPs for these sites will be implemented incrementally as related construction is completed and the facilities are placed in service, beginning with a period of manual operation to validate the control assumptions for each site, followed by increasing levels of system automation as the automated controls for individual components are implemented, validated, and then incorporated into the overall RTC system.

Storage Optimization

- CSO029, CSO036, CSO193, CSO195, CSO196, CSO198, CSO199, CSO201, CSO202 designs were added to the bid package of CSOs 178, 181 and 197 since MSD crews were shorthanded and unable to implement the dam raises. Construction is anticipated to be bid during the upcoming reporting period.
- Complete SWOR1/SWSG repairs. The gates and actuators for the Southwest Outfall sluice gate chamber have been delivered and the center gate has been installed. Installation of the north and south gates is expected to be completed by January 2018 after which the set point will be gradually increased utilizing a step-wise approach.

- Complete Southern Outfall Retention 1 (SOR1) in-line storage facility construction. Develop RTC programming and the preliminary SOP for the facility. Conduct start-up and begin operating the site under manual/local controls. Commissioning into the RTC system will occur after a period of manual and supervised operation during which operational assumptions will be validated and operational parameters will be tuned for the site. Once performance is deemed satisfactory, the site will be operated under increasing levels of system automation and be commissioned into the overall RTC system. Set points will be increased in a step wise approach to attain the optimal levels supporting the consent decree.

2.4. NMC 3: REVIEW AND MODIFICATION OF PRETREATMENT REQUIREMENTS

FY17 Program

- Completed FY17 NMC 3 Trunk Sewer Water Quality Data Collection in September 2016. Finalized pollutants of concern (POCs) and trunkline sewer data (contributory to CSOs) for FY17 Dry Weather Sampling Result Report. Reviewed and evaluated FY17 trunk sewer data against prior trunk sewer data to determine if changes in pollutants warrant review of contributory Non-Domestic Dischargers (NDDs). Determined POCs and trunkline sewer (contributory to CSOs) dry weather sampling strategy for FY18. Prepared a report to document the findings and recommendations resulting from sampling efforts.
- Continued to send wet weather alerts to NDDs of concern prior to rain events, reminding them of their commitment to implement voluntary controls during wet weather events. During this reporting period, the MSD service area experienced 104 measurable rain events and 18 events with only trace rainfall. MSD sent email notices to NDDs 53 times prior to precipitation events. The email notices contain information regarding expected precipitation expected for a one- to four-day period. There are currently seven NDDs that voluntarily implement controls during wet weather by alternating their cleaning schedule and/or by storing wastewater during a rain event.
- Continued to track performance measures to quantify the effectiveness of voluntary controls during wet weather events. The pollutant loading kept out of the CSS per typical rain event in previous fiscal years has been quantified with the data from the wet weather logs submitted by NDDs and is shown in Table 2.1. The typical results of pollutants kept out of the CSS when all NDDs participate are presented Table 2.2, quantified based on the actual rain events when NDDs detained their flow or otherwise reduced their discharge. One new industry (Diageo, PLC) joined the program when they started production during the reporting period.
- Continued to include specific NMC 3 related language as appropriate, in new and re-issued wastewater discharge permits to facilities located in the CSS, as well as in all Unusual Discharge Requests (UDRs) approved for discharge to the CSS. MSD re-issued 10 wastewater discharge permits to users discharging to or immediately upstream of the CSS. There were 42 UDRs processed for discharges to Morris Forman WQTC in FY17. The UDRs included 34 locations in the CSS and 8 locations in the SSS which ultimately discharge to Morris Forman WQTC. To avoid the risk of an overflow occurring, UDR permits contain standard condition requirements which restrict discharges into the collection system when wet weather conditions are expected.

- Conducted two NMC 3 site inspections at NDD facilities as part of the permit renewal process.
- Conducted twelve NMC 3 site inspections at Industrial User facilities not currently in the formal NMC #3 program as part of the initial permitting or permit renewal process. These facilities were found to have little to no impact during rain events. MSD elected not to request implementation of voluntary controls by these facilities at this time because of the limited benefit to be gained. MSD heightened the understanding of the CSS operation during wet weather for these industries during the inspections.
- Continued to include hold and release requirements in permits for all new industrial users in the combined sewer system and for existing industrial customers that expand production in the combined sewer system. The volume and duration of each hold and release requirement were determined through use of MSD's hydraulic model. MSD applied this requirement to two permits during the reporting period, and documented which permitted industries have 'hold and release' permit requirements.
- Continued to seek out green infrastructure opportunities at NDDs discharging to the CSS, and documented the permitted industries that use green infrastructure to reduce flow contributions during wet weather.
- Documented which NDDs have ceased operation during the reporting period.
- Began a review of improvements made to the combined sewer system infrastructure and their potential impact on the NMC 3 program. Updated CSS flows from the most recent calibrated hydraulic model.
- Conducted staff training on implementation of the NMC 3 program in January 2017.

FY18 Program

- Complete FY18 NMC 3 Trunk Sewer Water Quality Data Collection effort. Compare FY18 trunk sewer data against prior trunk sewer data to determine if changes in pollutants warrant review of contributory NDDs. Determine POCs, NDDs (based on historical data), and trunkline sewer (contributory to CSOs) for FY19. Review NDDs (based on historical data) to identify those that may be removed from the program, as well as any that may need to be added. Prepare a file report to document the findings and recommendations resulting from FY18 NMC 3 trunk sewer collection data.
- Continue to send wet weather alerts to NDDs of concern prior to rain events, reminding them of their commitment to implement voluntary controls during wet weather events.
- Continue to include specific NMC 3 related language as appropriate, in new and re-issued wastewater discharge permits to facilities located in the CSS, as well as in all Unusual Discharge Requests approved for discharge to the CSS.
- Conduct NMC 3 site inspections at Industrial User permitted facilities not currently in the formal NMC 3 program as part of the permit renewal process.
- Discuss NMC 3 program participation at each annual site inspection for Industrial Users who are currently in the NMC 3 program.

- Track performance measures to monitor the effectiveness of the implementation of NMC 3 within the Pretreatment Program.
- Review all new industrial users and existing industrial users with increased discharges in the combined sewer system to determine if hold and release requirements need to be added into their permits. Continue to document which permitted industries have hold and release permit requirements. Continue to document which permitted industries use green infrastructure to trade off for their 'hold and release' program.
- Document which NDDs have ceased operation and quantify the impact/reduction on CSS operation.
- Continue to review improvements made to the combined sewer system infrastructure and their potential impact on the NMC 3 program. Consider updated flows from the most recent calibrated hydraulic model. Some CSS improvements may result in changes to the ongoing NMC 3 program. Document the changes and impacts in a memo to the file.

Table 2.1 Typical Pollutants Kept Out of the CSS per Rain Event [1]

FISCAL YEAR	NUMBER OF NDDS PARTICIPATING[2]	VOLUME (GAL)	BOD (LBS)	TSS (LBS)
FY11	9	139,000	4,310	2,490
FY12	9	110,000	3,910	1,690
FY13	8	170,000	5,430	3,370
FY14	7	170,000	5,500	4,060
FY15	7	235,000	6,830	5,770
FY16	6	239,000	7,190	6,220
FY17	7	255,000	7,950	6,850

[1] When all NDDs participate.
[2] Change due to NDD operational changes: Solae (FY13 - cessation); Kent Feed (FY14 - cessation); Canadian Harvest (FY16 - cessation); Diageo (FY17 - commencement).

Table 2.2 Total Quantity Pollutants Kept Out of the CSS

FISCAL YEAR	NUMBER OF WET WEATHER DAYS	VOLUME (GAL)	BOD (LBS)	TSS (LBS)
FY11	130	7,909,000	265,000	160,000
FY12	68	3,524,000	109,000	51,000
FY13	72	9,143,000	290,000	213,000
FY14	46	5,721,000	181,000	147,000
FY15	58	14,838,000	448,000	385,000
FY16	78	14,747,000	453,000	396,000
FY17	104	21,065,000	659,000	575,000

2.5. NMC 4: MAXIMIZATION OF FLOW AT THE MORRIS FORMAN WATER QUALITY TREATMENT CENTER

FY17 Program

Determined the proposed Capacity Calculator (developed to reflect results of secondary clarifier stress testing) and the algorithm developed to calculate flow under Sluice Gate 1 (SG-1) at the Main Diversion Structure into the RTC system should be on-hold until after the Morris Forman WQTC Headworks project and the Bells Lane Wet Weather Treatment Facility are in operation. Modifications will likely be made in early FY18, when the flow control system is automated.

Continued development of Effective Utility Management (EUM) performance measures for treatment parameters. Five measures related to treatment effectiveness were identified and tracking has begun on each measure.

The following provides an update on projects underway during the reporting period:

- Bells Lane Wet Weather Treatment Facility – The project has been under construction during this period and is scheduled to be completed during the upcoming reporting period. Since December 2015, MSD has coordinated with EPA and KDOW on the status of this project, including delay causes and strategies for expediting the schedule. A letter was submitted to EPA on September 28, 2016, requesting a minor modification to the project to extend the Consent Decree deadline from December 31, 2016, to September 30, 2017 due to the construction delays caused by weather and permitting issues with CSX Railroad. Approval for the extension was granted on November 3, 2016. MSD and Hall Contracting held biweekly coordination meetings to take necessary steps to have the project substantially operational by September 30, 2017. The project will be completed in the upcoming reporting period.
- Morris Forman WQTC Headworks – The project continued construction in FY17. The bar screens, grit removal equipment and other miscellaneous equipment have been replaced in both the East and West Headworks. MSD is targeting this project for completion before the commissioning of the major off-line storage basins, in anticipation of increased grit and screenings loading to the Morris Forman WQTC when the new storage basins are cleaned following wet weather events.
- Electrical High-Yard Modification – This project replaced the existing electrical High Yard improving electrical distribution for Morris Forman WQTC. The project is substantially complete.
- Final Effluent Pump Station (FEPS) Generator – This project supplies temporary electrical power for one of the FEPS pumps during a power failure. The project began construction in FY16. The new generator has been installed and tested.
- Oxygen Generation – This project was completed during this reporting period.
- Wet Cake Pump – This project provides a backup to the dewatered biosolids cake screw conveyor. The project is complete.
- Condenser Upgrades – This project upgrades the condenser units in the sludge drying process. This project is complete.

- Centrifuge Backdrive Controls – This project helps to improve reliability of the centrifuges. The project is 80% complete.

FY18 Program

- Track performance on each of the five EUM measures.
- The following describes plans for work on Projects in FY18:
  - Bells Lane Wet Weather Treatment Facility – The project is scheduled to be substantially operational during the upcoming reporting period with final completion anticipated in the 2nd quarter.
  - Morris Forman WQTC Headworks – The project is substantially operational during this period with final completion anticipated in the 2nd quarter.
  - Electrical High-Yard Modification – The project was completed 1st quarter.
  - FEPS Generator – The project is scheduled to be completed in the 2nd quarter.

2.5.1 MORRIS FORMAN WATER QUALITY TREATMENT CENTER

FY17 Program

Flows

Continued to maximize flow to the Morris Forman WQTC. Charts that compare plant flow at the Morris Forman WQTC during the reporting period with the occurrence of CSOs at the Main Diversion Structure and the Southwestern Pump Station have been previously included in Consent Decree quarterly reports. Refer to Figure 2.3 for location of the CSOs relative to the WQTC.

Figure 2.3. Morris Forman WQTC and CSO Locations

Outages

- To facilitate return activated sludge (RAS) line replacement, 40% of the secondary capacity (one high purity oxygen reactor) was removed from service in two stages. During rain events in September, Morris Forman WQTC was limited to wet weather flows of 100 MGD through the secondary treatment process. Total plant capacity was 160 MGD due to the Headworks construction work described previously.
- The Morris Forman Headworks Replacement Project continued. The West Headworks Channels were taken out of service in the first quarter to replace the bar screens and grit channel aeration and grit removal equipment.

The West Headworks was returned to service in November 2016. Contractors continued work on channels 3 and 4 in the East Headworks. Channels 3 and 4 in the East Headworks were put back into service with Channels 1 and 2 being taken out of service near the end of the reporting period for construction.

- FEPS was in service 52 days of the third quarter and 28 days of the fourth quarter of the reporting period. Plant capacity was 185 MGD while FEPS was in service.

Violations

- In September 2016, Morris Forman WQTC did not meet the Seven and 30 Day Secondary Effluent Total Suspended Solids (TSS) and Biochemical Oxygen Demand (BOD) Limits.
- In October 2016, Morris Forman WQTC did not meet the Seven and 30 Day Secondary Effluent Total Suspended Solids (TSS) and Biochemical Oxygen Demand (BOD) Limits and percent removal for TSS.
- In November 2016, Morris Forman WQTC did not meet the Seven and 30 Day Secondary Effluent Total Suspended Solids (TSS) and Biochemical Oxygen Demand (BOD) Limits.
- In December 2016, Morris Forman WQTC did not meet the Seven and 30 Day Secondary Effluent Total Suspended Solids (TSS) limits, the Seven and 30 Day Secondary Effluent Biochemical Oxygen Demand (BOD) limits, and percent removal for TSS.
- In January 2017, Morris Forman WQTC did not meet the Seven and 30 Day Secondary Effluent Total Suspended Solids (TSS) limits and the Seven and 30 Day Secondary Effluent Biochemical Oxygen Demand (BOD) limits.
- In February 2017, Morris Forman WQTC did not meet the Seven and 30 Day Secondary Effluent Total Suspended Solids (TSS) limits, the Seven and 30 Day Secondary Effluent Biochemical Oxygen Demand (BOD) limits, and percent removal for TSS.
- In March 2017, Morris Forman WQTC did not meet the Seven and 30 Day Secondary Effluent Total Suspended Solids (TSS) limits and the Seven and 30 Day Secondary Effluent Biochemical Oxygen Demand (BOD) limits.
- In April 2017, Morris Forman WQTC did not meet the Seven and 30 Day Secondary Effluent TSS limits.
- In May and June, 2017, all effluent parameters were met.

FY18 Program

The FY18 program for the Morris Forman WQTC is as described previously under Section 2.5.

2.5.2 WET WEATHER CAPTURE

Over the past several years, the long term trend continues to show that MSD has increased the amount of wet weather flow treated at the Morris Forman WQTC. The wet weather capture is the difference between the annual average flow treated and the base wastewater flow (defined in state regulations as the lowest monthly average day flow during the calendar year). CY17 (through June 30) shows a slight increase in base flow compared to CY16, as seen in Figure 2.4. Overall, the long term base flow trend is dropping slightly, reflective

of a trend toward lower per capita water use as identified by the Louisville Water Company records, and also some loss of customers in the industrial/commercial and residential customer base in the Morris Forman WQTC service area. The long-term trend shown in Figure 2.4 confirms that while individual year data is highly variable due to weather impacts, the long-term trend in wet weather capture continues to increase. The increasing trend in wet weather capture is largely attributed to a combination of capital improvements at the Morris Forman WQTC, development of wet weather operational procedures, and implementation of RTC facilities in the CSS.

The long term trend in the peak daily flow treated at the Morris Forman WQTC also shows improvement, as shown in Figure 2.5. Each data point represents the maximum daily flow treated during the year. Although the instantaneous peak hydraulic capacity of the Morris Forman WQTC is 350 MGD, the sustained flow that can be treated on a daily basis is governed by a number of other factors, including the performance of the biological treatment processes. While individual years are highly variable due to weather impacts, the long-term trend continues to be up. Factors contributing to this long-term positive trend are implementation of the new wet weather SOP and better wet weather process control at the Morris Forman WQTC. However, CY16 and CY17 show decreases in peak daily flow, as recent repair work has reduced the ability of the plant to operate at high flow for extended periods. MSD is currently evaluating whether additional work needs to be performed in order to treat elevated flows for a longer period of time without jeopardizing permit compliance.

Figure 2.4. Morris Forman WQTC Wet Weather Capture Trend

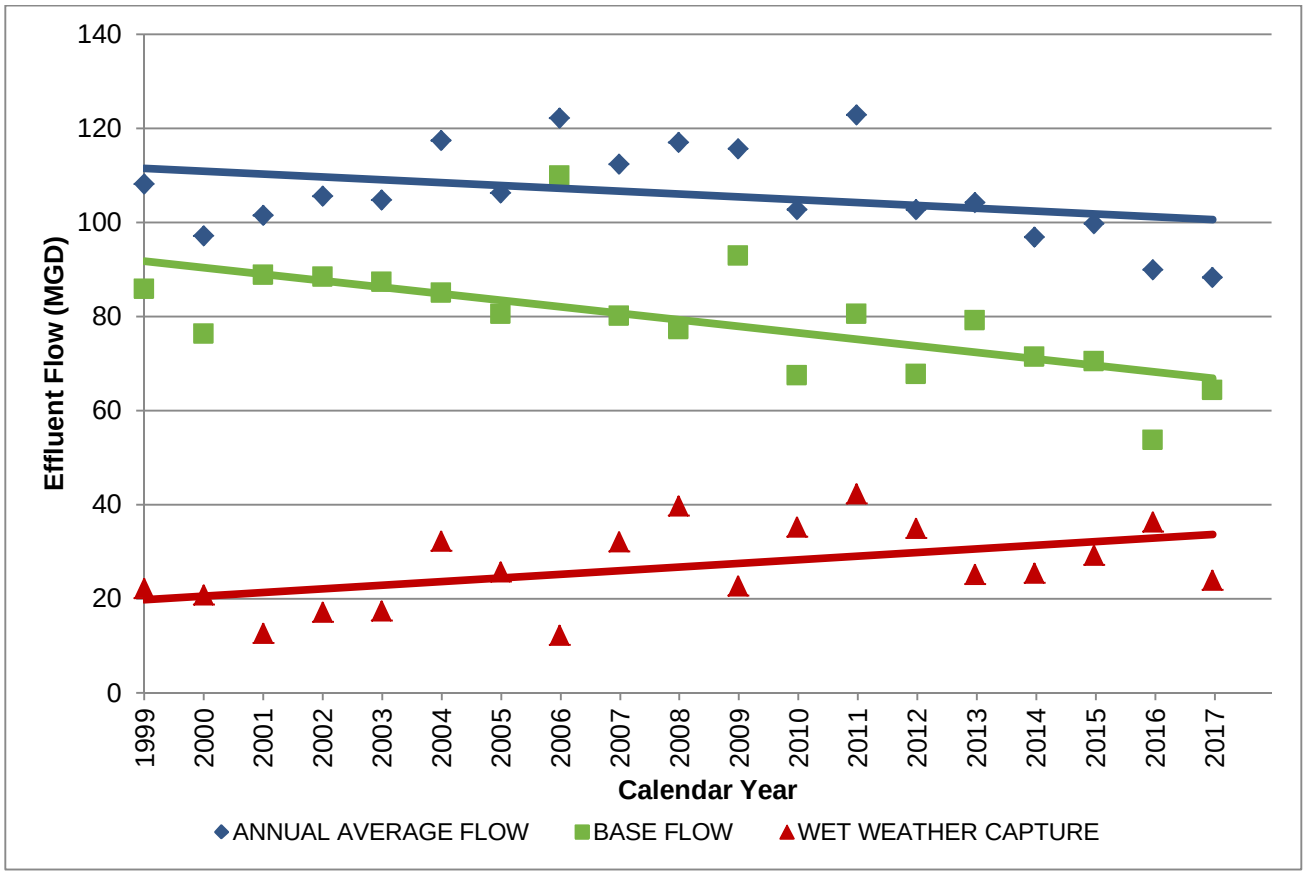

Figure 2.5. Morris Forman WQTC Peak Daily Flow

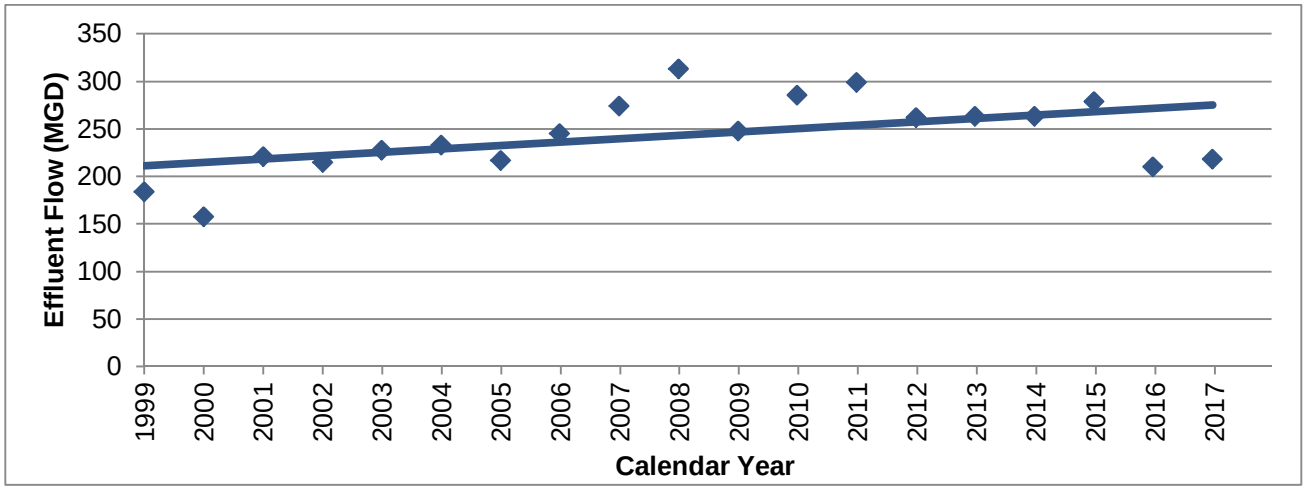


2.6. NMC 5: ELIMINATION OF COMBINED SEWER OVERFLOWS DURING DRY WEATHER

FY17 Program

Flood Pump Stations

- Continued updates of the U.S. Army Corps of Engineers (USACE) Flood Operations and Maintenance Manual to reflect changes in operations that have occurred with the IOAP projects and operational SOP improvements. This will be an ongoing task until all the projects in the IOAP are completed and an ongoing task as NMC programmatic activities are completed.
- Monitored Flood Pump Stations (FPSs) for opportunities to pump trapped flow back into the combined sanitary sewer system to avoid dry weather overflows as a result of operation of the flood protection system from the 34th Street, Starkey and 4th Street FPSs.

Asset Analysis

- Performed the quarterly evaluation of dry weather unauthorized discharges to the WUS, with emphasis on the CSS, to determine causes and to determine if there is a need for corrective activities. The recommendation delivered from the inspection included continued interaction with the Louisville Water Company on response to water main breaks.
- Initiated design of source control at all upstream catch basins to address clogging of the siphon downstream of CSO153.
- Performed inspection and cleaning of Fats, Oils and Grease (FOG) hotspots within the CSS, in accordance with CMOM commitments.

FY18 Program

Flood Pump Stations

- Continue to implement additional operational modifications at FPSs within the CSS to prevent dry weather overflows. Discussions with the USACE to continue regarding proposed modifications to these pumping stations that will minimize dry weather CSOs due to high river levels. This will be an ongoing activity until all the IOAP projects are completed and as staff implements programmatic NMC activities.
- Continue to review SOPs for the FPSs to reflect ongoing operational changes that occur as capital projects and NMC programmatic activities are completed.

Asset Analysis

- Perform a quarterly evaluation of dry weather overflows to the WUS, with emphasis on the CSS, to determine causes and to determine if there is a need for corrective activities.
- Perform inspection and cleaning of FOG hotspots within the CSS, in accordance with CMOM commitments.
- Complete design of source control at all upstream catch basins to address clogging of the siphon downstream of CSO153.

2.7. NMC 6: CONTROL OF SOLIDS AND FLOATABLE MATERIALS IN COMBINED SEWER OVERFLOWS

FY17 Program

- Continued to monitor and document performance of the CSO108 Solids & Floatables (S&F) Control Continuous Deflection Separator (CDS) operation in accordance with the Memorandum of Understanding (MOU) with the Kentucky Nature Preserve. Copies of the semi-annual CSO108 efficacy report are provided in quarterly reports for the reporting period (January and July).
- Continued to review new S&F technologies for potential incorporation into the program.
- Continued inspection and maintenance procedures for the S&F structures as part of the weekly CSO inspections and PM cleaning routines, outlined under NMC #1. During the reporting period, 613 work orders were issued for debris removal at the S&F structures.
- Constructed a spring-loaded bending weir at CSO023.
- CSO190 was evaluated and a dam raise was recommended and designed.
- Bending weirs and the associated S&F controls were designed for CSOs 178 and 181, to be bid as a part of the Central Relief Drain CSO In-Line Storage, Green Infrastructure, and Distributed Storage project. Designs for CSOs 029, 036, 193, 195, 196, 198, 199, 201, and 202 modifications were added to the bid package.
- CSO197 dam raise and S&F controls designs were completed in FY17.

- Continued working with staff to determine the quantity of debris and floatables captured by street sweeping, catch basin cleaning, at the Headworks of the Morris Forman WQTC, and at the end of line S&F controls. Reports have been developed to capture the amount of material removed through catch basin cleaning and at the end of the line S&F controls. Results for the reporting period are shown in Table 2.3 and Figure 2.6. At this time, S&F capture at the headworks of Morris Forman WQTC is not as high as in previous years, likely due to a combination of variables, including the Morris Forman WQTC Headworks project and ongoing recovery efforts related to failure of the high yard on April 8, 2015, as well as unusually dry periods of weather.

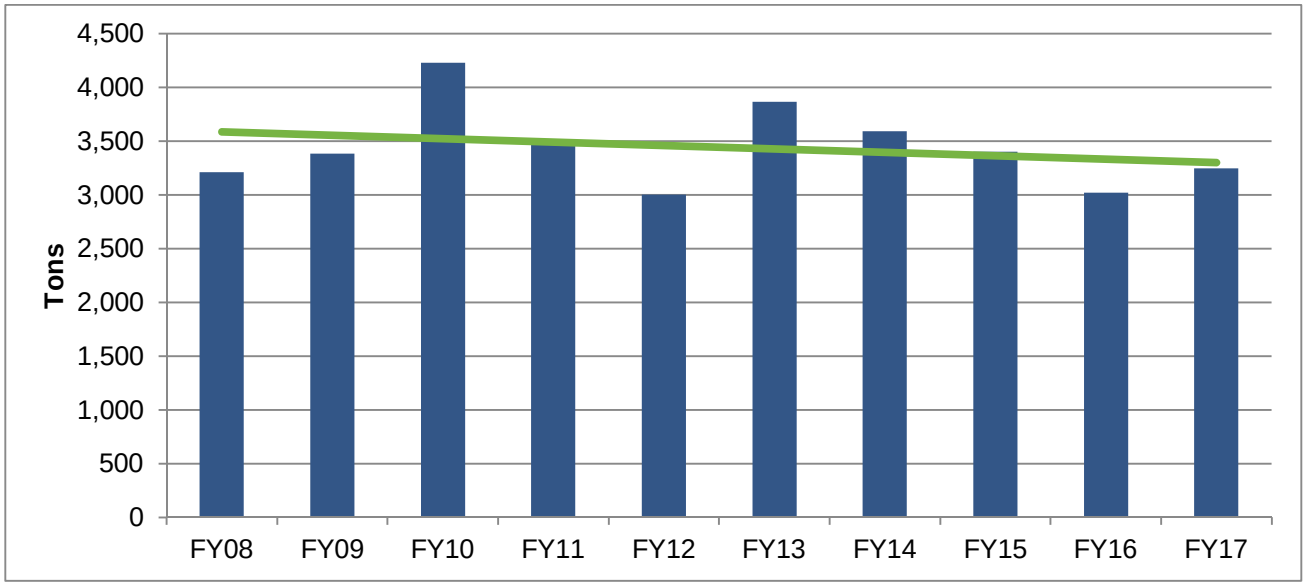
FY18 Program

- Review and refine S&F control operations and maintenance training and administer to appropriate staff.
- Evaluate S&F control configuration at CSO016.
- Complete construction of CSO190 modifications.
- Advertise and bid Central Relief Drain CSO In-Line Storage, Green Infrastructure, and Distributed Storage project, including CSO modifications. Perform additional evaluation of upstream conditions on all dam raises to determine if any basements are at risk for flooding on all CSOs with dam raises.
- Continue to monitor and document performance of the CSO108 S&F structure operation in accordance with the MOU with the Kentucky Nature Preserve by MSD Crews. Reports will be submitted on December 31, 2017, and June 30, 2018.
- Track the volume of S&F materials removed from the CSS.

Table 2.3. Debris Removed from System

ACTIVITY / LOCATION	APPROXIMATE AMOUNT OF DEBRIS REMOVED
Catch Basin and Sewer Cleaning	2,270 CY
Street Sweeping	1,309 tons
Morris Forman WQTC Headworks	3,202 tons

Figure 2.6. Solids and Floatables Capture at Morris Forman WQTC



2.8. NMC 7: POLLUTION PREVENTION PROGRAMS TO REDUCE CONTAMINANTS IN COMBINED SEWER OVERFLOWS

FY17 Program

- Continued coordination of activities performed by Louisville Metro, such as street sweeping, Operation Brightside (trash and litter clean-up), and other Metro pollution prevention programs.
- Continued administration of the Hazardous Materials Ordinance, which requires users with hazardous materials on site to submit a spill prevention and control plan. Continued response to spills of hazardous materials and incidents involving discharges to the sewer system and provided spill mitigation kits to the Louisville Metro Fire Department to use to absorb vehicle fluids rather than flushing to the sewer.
- Continued administration of the Erosion Prevention and Sediment Control Ordinance (EPSC). Continued use of a tracking system for EPSC Notices of Violation (NOVs) and Field Correction Notices (FCNs) within the CSS.
- Continued issuance of Wastewater Discharge Permits under the Industrial Pretreatment Program.
- Participated in the Mayor's Give-A-Day week of service on April 17, 2017, and April 19, 2017, to perform cleanup along Beargrass Creek, in close proximity to several CSOs.
- Participated in the Annual Ohio River Sweep on June 17, 2017.
- Promoted Green Infrastructure initiatives within Jefferson County, such as guidance on downspout disconnection and rain garden installation.
- Led an informational session on residential rain garden construction at the Louisville Free Public Library's How-To Festival on May 13, 2017.

- Led a rain garden workshop at Maupin Elementary School on April 19, 2017.
- Continued to prepare and distribute informational pieces, targeted to inform customers and residents on activities that can be practiced within their homes to assist in the reduction of overflows within the collections system.
- Continued to enhance and train on Stormwater Pollution Prevention Plans (SWPPPs) for the WQTCs, major pump stations, and the Central Maintenance Facility.
- Distributed literature to Significant Industrial Users on best management practices for prevention of pollution.
- Continued enhancement of the framework for the IOAP green infrastructure program tracking in Hansen.
- Utilized and distributed the rain garden handbook to Louisville Metro agencies and to the public in order to encourage green infrastructure.

FY18 Program

- Utilize and distribute the rain garden handbook to Louisville Metro agencies and to the public in order to encourage green infrastructure.
- Continue to track green infrastructure projects and initiatives in Hansen and SharePoint.
- Continue to track EPSC NOVs and FCNs within the CSS.
- Continue to prepare and distribute informational pieces, targeted to inform customers and residents on activities that can be practiced within their homes to assist in the reduction of overflows within the collection system.

2.9. NMC 8: PUBLIC NOTIFICATION

Refer to Section 5: Public Outreach, Education, Notification and Participation for information regarding public notification.

2.10. NMC 9: MONITORING TO CHARACTERIZE COMBINED SEWER OVERFLOW IMPACTS AND THE EFFICACY OF COMBINED SEWER OVERFLOW CONTROLS

Refer to Section 4.5 for information regarding system monitoring.

2.11. NMC ACTIVITY SCHEDULE

NMC capital project milestones for the current reporting period as well as a look-ahead for the upcoming reporting period are provided in Figure 2.7.

Figure 2.7. NMC Annual Commitments Schedule

Activity ID	Task Name	% Complete	Start	Finish

SECTION 3: PROGRAM ACTIVITIES FOR SEWER OVERFLOW RESPONSE PROTOCOL

3.1. SEWER OVERFLOW RESPONSE PROTOCOL PROGRAM BACKGROUND

Per Paragraph 24.d. of the Amended Consent Decree, MSD initially submitted the Sewer Overflow Response Protocol (SORP) to the Environmental Protection Agency (EPA) and Kentucky Department of Environmental Protection (KDEP) on February 10, 2006, and received comments on March 13, 2006. MSD resubmitted the revised SORP on May 12, 2006, and received an approval letter for the SORP on August 22, 2006. The most recent version is dated February 12, 2012. The approved SORP document can be viewed on the MSD Project WIN website, available at **www.msdlouky.org/projectwin**. The following activities were performed during the reporting period.

3.2. OVERFLOW MANAGEMENT AND FIELD DOCUMENTATION

FY17 Program

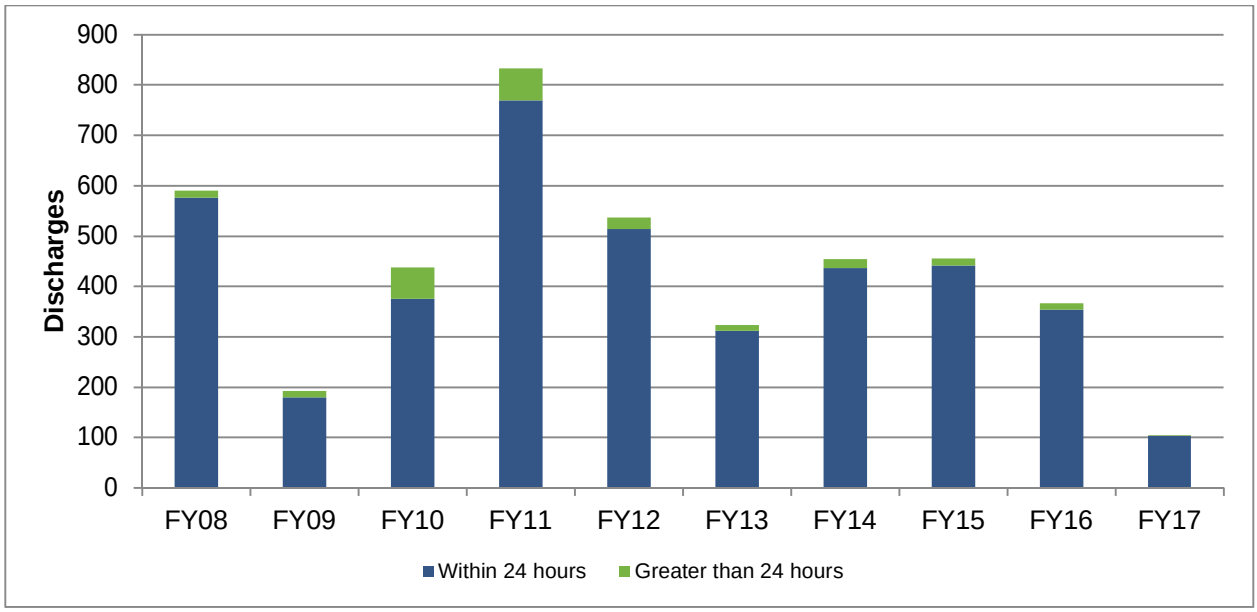
- Documented a total of 105 overflows and unauthorized discharges to waters of the US (WUS) during the reporting period. The charts pertaining to discharges in Section 1.1.2 show these overflows broken down by result, problem, and asset type. Interior overflows are from MSD main line issues only, and do not include those that are the result of a problem on MSD's portion of the lateral. In addition, any interior overflow that is caused by a private property matter is also excluded from reporting.
- Reported 104 of the 105 overflows that reached the WUS (99.0%) within 24 hours as shown in Figure 3.1.
- Reported 5 of the 105 overflows that reached the WUS (4.9%) as a Bypass event that included a required additional 5-day written report.
- Reported 8 of the 29 dry weather overflows (27.6%), each with a volume between 1,000 and 50,000 gallons.
- Reported 5 of the 29 dry weather overflows (17.2%), each with a volume greater than 50,000 gallons.
- Submitted revised SORP Implementation Manual August 22, 2016. Submittal was approved July 21, 2017.
- Continued daily, monthly and quarterly reviews with staff from MSD Operations and MSD Engineering Divisions.
- Continued to monitor SSO sites, which have been grouped into routes based on the range of rainfall rates necessary to cause an SSO. These routes were monitored during rain events depending on the magnitude and location of the storm. If an overflow was observed, a discharge work order was created to document the event. MSD staff executed a total of 2,068 wet weather inspections on a total of 16 days, and documented 60 unauthorized discharges (2.9%) through route reconnaissance.

- Continued to monitor over 300 sites via telemetry. There was one site where sewage was routinely (3 or more times per year) hauled from pump stations to prevent overflows during rain events depending on the magnitude and location of the storm. Due to capacity issues, MSD staff hauled over 104,800 gallons of sewage. It should be noted that this value is greater than previously reported in the quarterly reports, due to late invoicing by the hauling contractor.

FY18 Program

- Continue to monitor data, train staff and update information as needed.
- Continue to monitor over 300 sites via telemetry.
- Continue to haul to prevent overflows and backups during rain events until system improvements are completed.
- Continue to monitor documented collections system SSO sites, which have been grouped into routes based on the range of rainfall rates necessary to cause a SSO.
- Continue the daily, monthly and quarterly data reviews with staff from Engineering and Operations Divisions to ensure accuracy and consistency in reporting.
- Schedule additional field reviews of SORP procedures after rain events to both ensure successful implementation and to assist with the annual SORP overall review.

Figure 3.1. Reporting Timeframe for Unauthorized Discharges to Waters of the US



3.3. REGULATORY REPORTING AND DATA MANAGEMENT

FY17 Program

- Conducted monthly meetings with staff to perform quality control on discharge work orders.
- Conducted a monthly review of the discharge work orders and updated the associated assets in Hansen as needed.
- Performed a detailed review and trend analysis on the discharge data, incorporated the findings into the quarterly SORP training and the quarterly reports.

FY18 Program

- Continue to perform quality control on discharge work orders with appropriate staff.
- Update assets in Hansen when new overflow locations are identified.
- Continue to review the overflow data for trends. These trends are discussed with staff in the Quarterly SORP training and documented in the Quarterly Reports.

3.4. STAFF TRAINING AND COMMUNICATION

FY17 Program

- Facilitated SORP Quarterly and Annual Training as detailed in Table 3.1. Updated the modules for each of the quarterly SORP training prior to each session.

Table 3.1. SORP Training Schedule and Attendance

KEY LEARNING OBJECTIVE	MONTHS	CLASSES	STAFF TRAINED
Clean Up & Public Notification	July - September	13	243
Annual Overview and Overflow Field Documentation	October - December	21	579
Monitoring, Staging, Reconnaissance and Mobilization	January - March	13	250
Control Zones, Mitigation & Volume Estimation	April - June	13	252

FY18 Program

- Launch a new online training delivery system to allow more flexibility for employees to complete training at convenient times during the quarter and to integrate SORP training with new employee and contractor orientation. The existing training program is being reviewed, updated, and repackaged into an enhanced online format. Modules will also be developed to provide continued updates related to progress under the IOAP and projects under the CMOM and NMC programs on a quarterly basis, as well as CSO and SSO abatement and annual trends on an annual basis. Schedule SORP Quarterly and Annual Training as described in Table 3.2.
- Continue to review and update the data associated with overflows.

Table 3.2. Projected SORP Training Schedule

KEY LEARNING OBJECTIVE	MONTHS
Public Notification & Overflow Cleanup	July - September
Reporting & Follow-up	October - December
Annual Overview & Update (CY17)	October - December
Annual Overview & Update (CY18)	January - December
Preparing for Overflows, Monitoring, & Mobilization	January - March
Assessment, Mitigation, & Documentation	April - June

3.5. ANNUAL PROGRAM REVIEW

FY17 Program

- Completed the annual SORP document review in August 2016. Revised SSO routes removed references to Jeffersontown Blending and updated submittal information in the SORP document as part of the review.
- Reviewed and updated routes to include any new SSO locations.

FY18 Program

- Perform the annual SORP document review prior to August 2017. There are no major program updates anticipated at this time. Routes will be reviewed and updated to include any new SSO locations or changes in responsible MSD reporting departments.
- Send new SSO routes to EPA/KDEP by August 22, 2017. New routes will be published once approved by EPA/KDEP.

3.6. PUBLIC NOTIFICATION AND COMMUNICATION

Refer to Section 5: Public Outreach, Education, Notification and Participation for information regarding public notification.

SECTION 4: PROGRAM ACTIVITIES FOR DISCHARGE ABATEMENT PLANS

4.1. INTEGRATED OVERFLOW ABATEMENT PLAN

As a requirement of the Amended Consent Decree, per Paragraph 25, MSD is to prepare and submit, for review and approval, discharge abatement plans. These discharge abatement plans identify the plan for the elimination of unauthorized discharges from the separate sanitary sewer system and the combined sewer system (CSS), the reduction and control of discharges from the Combined Sewer Overflow (CSO) locations identified in the Morris Forman Water Quality Treatment Center (WQTC) KPDES permit, and the improvement of water quality in the receiving waters.

The Final Sanitary Sewer Discharge Plan (SSDP) and the Final CSO Long Term Control Plan (LTCP) were submitted concurrently and certified on December 19, 2008, under the title of the Integrated Overflow Abatement Plan (IOAP). The IOAP was accepted by the Federal Court and incorporated by reference into the Amended Consent Decree by an Order signed February 12, 2010, that was entered into public record February 15, 2010.

MSD submitted an IOAP modification request to the Environmental Protection Agency (EPA) and Kentucky Department of Environmental Protection (KDEP) on September 20, 2012, with approval granted via certified letter on June 19, 2014. The modified project package, program descriptions and progress, and updated supporting text are included in the revised IOAP, submitted to EPA and KDEP on June 14, 2013. Minor project modifications have been submitted and approved since the 2014 approval of the 2012 IOAP Modification. A summary of these modifications is included in Table 4.1.

4.2. SANITARY SEWER DISCHARGE PLAN

The Sanitary Sewer Discharge Plan (SSDP) addresses the overflows and unauthorized discharges from the separate sanitary sewer system. Three separate plans have been submitted under this program as described below and outlined in Paragraph 25.a. of the Amended Consent Decree.

4.2.1 UPDATED SANITARY SEWER OVERFLOW PLAN IMPLEMENTATION

MSD prepared and submitted the Updated Sanitary Sewer Overflow Plan (SSOP) on February 10, 2006. This plan included an overview of the MSD sanitary sewer overflow abatement program and specific actions taken to reduce/eliminate overflows from the sanitary sewer system. This document included a list of the proposed improvements to be accomplished by December 31, 2008. Activities required under the Updated SSOP have been completed.

4.2.2 INTERIM SANITARY SEWER DISCHARGE PLAN

MSD submitted for approval an Interim Sanitary Sewer Discharge Plan (ISSDP) on September 30, 2007. Comments were received on January 8, 2008. MSD resubmitted the revised ISSDP on March 7, 2008, and received an approval letter for the ISSDP on July 24, 2008. The approved ISSDP document can be viewed on the MSD Project WIN website, available at **www.msdlouky.org/projectwin.**

4.2.3 FINAL SANITARY SEWER DISCHARGE PLAN

MSD submitted for approval a Final Sanitary Sewer Discharge Plan (SSDP) on December 19, 2008, as Volume 3 of the IOAP. The IOAP was accepted by the Federal Court and incorporated by reference into the Amended Consent Decree by an Order signed February 12, 2010, and was entered into public record February 15, 2010. A revised SSDP was included in the IOAP revision submitted June 14, 2013. On June 19, 2014, MSD received approval of the 2012 IOAP Modification from EPA / KDEP. Per paragraph 25.a.(3)C., the SSDP shall not extend beyond December 31, 2024. A listing of SSDP projects completed and certified during the reporting period, along with the entire schedule of projects, can be found in Section 4.4.

4.3. COMBINED SEWER OVERFLOW LONG TERM CONTROL PLAN

The CSO Long Term Control Plan (LTCP) addresses the overflows and unauthorized discharges from the CSS. Two separate plans have been submitted under this program as described below and outlined in Paragraph 25.b. of the Amended Consent Decree.

4.3.1 INTERIM COMBINED SEWER OVERFLOW LONG TERM CONTROL PLAN

The Interim CSO LTCP was initially submitted to EPA and KDEP on February 10, 2006. MSD received an approval letter dated February 22, 2007, for the Interim LTCP. The approved Interim CSO LTCP can be viewed on the MSD Project WIN website, available at **www.msdlouky.org/projectwin**.

This plan includes an overview of the MSD program efforts taken to reduce/eliminate discharges from the CSS and the list of proposed improvements to be accomplished by December 31, 2008. All projects associated with this plan have been completed.

4.3.2 FINAL COMBINED SEWER OVERFLOW LONG TERM CONTROL PLAN

MSD submitted for approval the Final CSO LTCP on December 19, 2008, as Volume 2 of the Integrated Overflow Abatement Plan (IOAP). The IOAP was accepted by the Federal Court and incorporated by reference into the Amended Consent Decree by an Order signed February 12, 2010, that was entered into public record February 15, 2010. Per paragraph 25.b.(2), completion of the Final CSO LTCP shall not extend beyond December 31, 2020. A listing of Final CSO LTCP projects completed and certified during the reporting period, along with the entire schedule of projects, can be found in Section 4.4.

4.3.3 GREEN DEMONSTRATION PROJECT UPDATE

The Final CSO LTCP (Volume 2 of the IOAP) included 19 green demonstration projects with schedules for completion in 2010 and 2011. The 19 green demonstration projects have been certified as complete.

Table 4.1. IOAP Project Minor Modifications

SUBMITTAL DATE	APPROVAL DATE	NEW PROJECT NAME	ORIGINAL PROJECT NAME	IOAP ID NUMBER	MODIFICATION DESCRIPTION
February 16, 2015	September 11, 2015	CSO190 Green Infrastructure Project	18th and Northwestern Parkway Storage Basin	L_SO_MF_190_S_09B_B_A_8	Green Infrastructure solutions for CSO190 replaced the storage basin at 18th and Northwestern Parkway.
February 16, 2015	September 11, 2015	Elimination of Chenoweth Hills WQTC, Chenoweth Run PS, and Chippewa PS	Chenoweth Hills WQTC Elimination and PS Improvements	S_JT_JT_NB01A_M_03_C	Project modification to construct new sewers and eliminate rather than upgrade Chenoweth Run and Chippewa Pump Stations
February 16, 2015	September 11, 2015	Goose Creek PS Phase 1 - Devondale Wet Weather Storage	Goose Creek PS Phase 1 - Devondale Wet Weather Storage	S_MI_MF_NB04_M_03_B	New sewer construction and a new Pump Station at Bancroft allowed for the elimination of both the Bancroft and Devondale WQTCs along with eliminating the need for wet weather storage
February 16, 2015	September 11, 2015	St. Rene Road Pump Station Elimination	St. Rene Road PS Inline Storage	S_FF_CH_NB01_S_09A_C_A	Elimination of the St. Rene Road Pump Station and diverting flow to the Cedar Creek WQTC replaced the in-line storage solution
February 16, 2015	September 11, 2015	Prospect #3 - ORFM System Improvements	Prospect #3 - ORFM System Improvements	S_OR_MF_NB04_M_03_B_B	Replaced in-line storage upstream of the Muddy Fork Pump Station with an offline covered storage basin
August 7, 2015	September 11, 2015	Southwestern Parkway Storage Basin	Southwestern Parkway Storage Basin	L_OR_MF_105_M_13_B_A_0	Increased basin size from 11.07 MG to 20 MG, with a level of control of 8 overflows per Typical Year and no net increase in AAOV
August 7, 2015	September 11, 2015	Portland Storage Basin	Portland Wharf Storage Basin	L_OR_MF_019_S_13_B_A_8	Increased basin size from 6.37 MG to 6.7 MG
August 7, 2015	September 11, 2015	Lexington Road and Payne Street Storage Basin	Lexington Road and Payne Street Storage Basin	L_OR_MF_083_M_09B_B_A_8	Increased basin size from 8.18 MG to 13.7 MG
August 7, 2015	September 11, 2015	Story Avenue and Main Street Storage Basin	Story Avenue and Main Street Storage Basin	L_OR_MF_020_S_09B_B_A_8	Increased basin size from 5.4 MG to 8.3 MG
August 7, 2015	September 11, 2015	13th Street and Rowan Street Storage Basin	13th Street and Rowan Street Storage Basin	L_OR_MF_155_M_09B_B_B_4	Increased basin size from 4.36 MG to 9.8 MG
December 21, 2015	January 11, 2016	Fairmount Road Pump Station Offline Storage Basin	Fairmount Road Pump Station Offline Storage Basin	S_FF_CC_81316_M_03_C_A	Change completion deadline from December 31, 2015 to March 31, 2016
September 28, 2016	November 3, 2016	Logan Street and Breckenridge Street CSO Basin	Logan Street and Breckenridge Street CSO Basin	L_SO_MF_092_M_09B_B_D_8	Change design from an at-grade basin with a building above to open space above the basin structure
September 28, 2016	November 3, 2016	Bells Lane Wet Weather Treatment Facility	Bells Lane Wet Weather Treatment Facility	L_OR_MF_015_M_13_B_B_8	Change completion deadline from December 31, 2016 to September 30, 2017
September 28, 2016	November 3, 2016	Nightingale Pump Station Replacement and Storage	Nightingale Pump Station Replacement and Storage	L_SO_MF_018_S_03_A_A	Change completion deadline from December 31, 2016 to June 30, 2017
September 28, 2016	November 3, 2016	Morris Forman WQTC Headworks	Southern Outfall Inline Storage (SOR2)	L_OR_MF_211_M_13_B_A_8	Elimination of SOR2 project and replace with flow control improvements at the Main Diversion Structure and rehabilitation of Morris Forman WQTC Headworks in order to increase maximum sustainable treatment capacity to 330 MGD
September 27, 2016, with administrative correction submitted on October 17, 2016	November 3, 2016	Ohio River Tunnel	13th Street and Rowan Street Storage Basin	L_OR_MF_155_M_09B_B_B_4	Revise design to a 31.8 MG tunnel solution that consolidates CSO controls for 13th Street and Rowan Street, Story Avenue and Main Street, and Lexington and Payne Street Storage Basins. Tunnel capacity will allow a level of control of eight overflows per Typical Year for 9 CSOs previously associated with 13th and Rowan. Weir raises at 3 CSOs will remain unchanged.
September 27, 2016, with administrative correction submitted on October 17, 2016	November 3, 2016	Ohio River Tunnel	Story Avenue and Main Street Storage Basin	L_OR_MF_020_S_09B_B_A_8	Revise design to a 31.8 MG tunnel solution that consolidates CSO controls for 13th Street and Rowan Street, Story Avenue and Main Street, and Lexington Road and Payne Street Storage Basins. Tunnel capacity will allow a level of control of eight overflows per Typical Year for the one CSO previously associated with Story and Main.
September 27, 2016, with administrative correction submitted on October 17, 2016	November 3, 2016	Ohio River Tunnel	Lexington Road and Payne Street Storage Basin	L_OR_MF_083_M_09B_B_A_8	Revise design to a 31.8 MG tunnel solution that consolidates CSO controls for 13th Street and Rowan Street, Story Avenue and Main Street, and Lexington Road and Payne Street Storage Basins. Tunnel capacity will allow a level of control of zero overflows per Typical Year for the nine CSOs previously associated with Lexington and Payne.

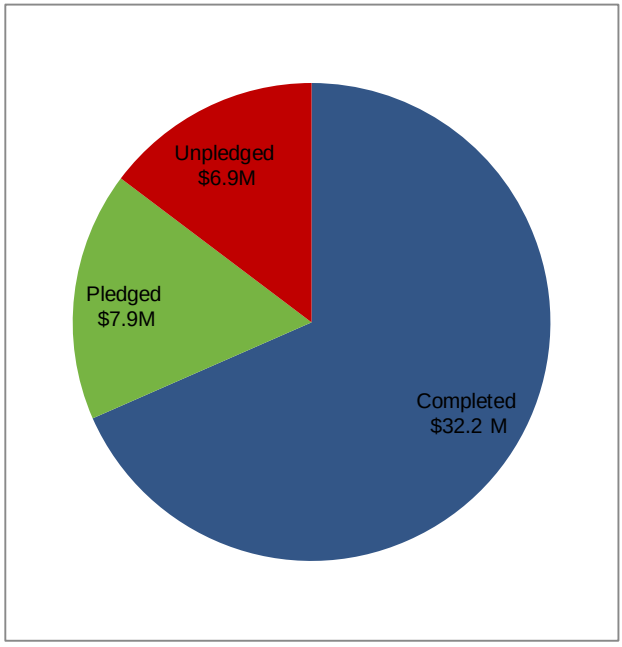
4.3.4 GREEN INFRASTRUCTURE PROGRAMMATIC ACTIVITIES

Figure 4.1 Green Infrastructure Spending

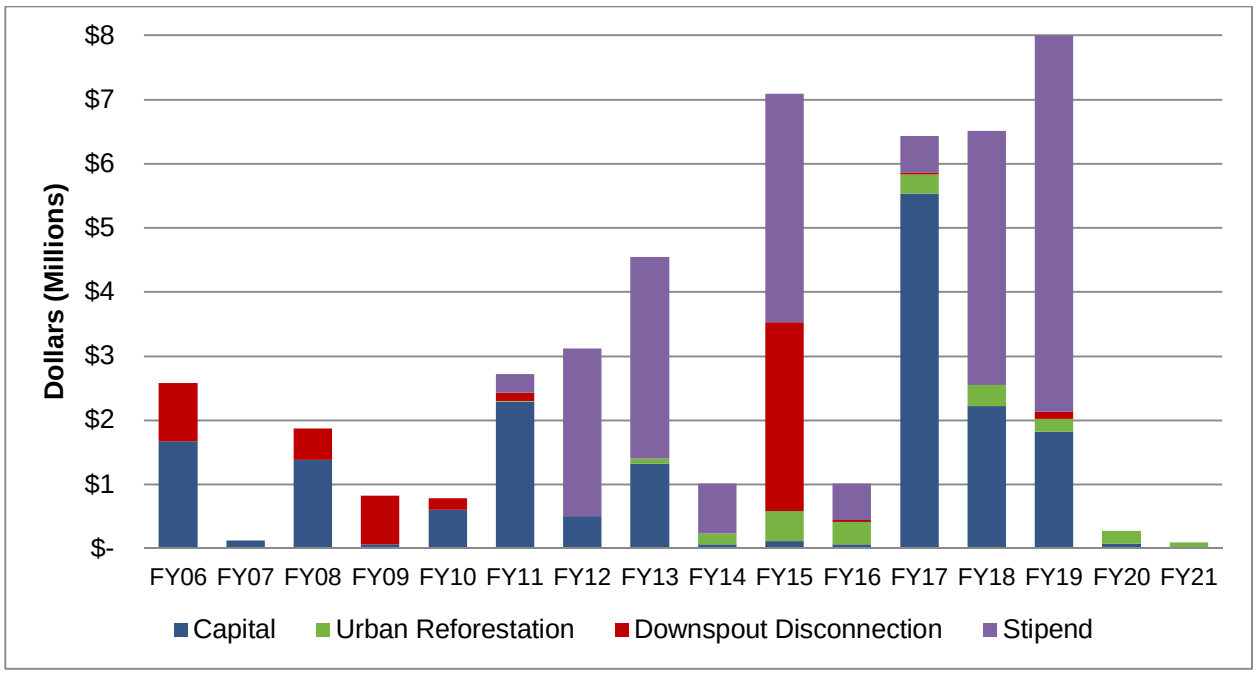


MSD allocated over $47 million for green infrastructure-related projects in the IOAP. As shown in Figure 4.1, MSD has spent $32.3 million, or 67.7%, of this commitment. Additionally, $7.9 million has been pledged to approved projects. The remaining $6.9 million, reported as unpledged, has been allocated for projects, but the final projects have not yet been approved. Figure 4.2 shows the types of projects where green infrastructure funding has been used or will be used prior to December 31, 2020.

FY17 Program

- Published updates to the Green Best Management Practice (BMP) manual.
- Maintained www.msdgreen.org, an MSD Green Infrastructure website intended to offer general information on green infrastructure.

Figure 4.2. Green Infrastructure Expenditures and Commitments



- Utilized a green tracking protocol for green infrastructure projects.
- Participated in Urban Heat Island workgroups under the guidance of Louisville Metro.
- Tracked and calculated the impacts of green infrastructure projects on stormwater capture and estimated overflow reductions.
- Continued the arrangement with EPA Office of Research and Development (ORD) to determine the performance of green infrastructure practices to determine most effective applications, maintenance cycles and areas with high potential for reduction of overflows.
- Supported a joint funding partnership with the Louisville Metro Office of Sustainability to further incentivize the construction of green infrastructure on private property.

FY18 Program

- Continue to participate in the Louisville Metro Sustainability Plan.
- Continue to track green infrastructure projects in Hansen and MSD's Geographic Information System (GIS).

4.4. DISCHARGE ABATEMENT PLAN PROJECT STATUS

4.4.1 PROJECT CERTIFICATION PROGRESS

This section addresses project certification progress for the current reporting period and required activities for the upcoming reporting period.

4.4.1.1. SANITARY SEWER DISCHARGE PLAN

Table 4.2 details SSDP projects completed and certified during the current reporting period, and Table 4.3 details SSDP projects required to be completed and certified during the next reporting period.

Table 4.2. FY17 IOAP Project Completion Dates – SSDP

BUDGET ID	ACD PROJECT NUMBER	PROJECT NAME	ACD DATE	CERTIFIED COMPLETION DATE

4.5. POST CONSTRUCTION COMPLIANCE MONITORING PROGRAM

Within the IOAP, monitoring efforts that support the impact evaluation of both project and plan implementation are discussed in Volume 1, Section 6.5 - Post Construction Compliance Monitoring (PCCM). These efforts are incorporated into MSD's overall environmental data monitoring and management planning and activities, which support various MSD initiatives including operational support, the Municipal Separate Storm Sewer System (MS4) program, hydraulic and water quality modeling, and a range of regulatory reporting and trending requirements. Under the IOAP, the primary compliance assessment objectives will be to certify project completion to the selected overflow control level, both for CSOs and SSOs, as well as to confirm that the predicted levels of overflow control and anticipated water quality benefits have been realized. As such, post-construction compliance monitoring supports impact analysis and the validation of various objectives of IOAP project initiatives, and the overall abatement plan.

4.5.1 MODELING PROGRAM

As implementation of the IOAP continues, the sewer models increasingly support critical planning and design decisions on sizing, location and operation of new facilities (e.g., storage basins, pump stations, gates) as well as providing validation of predicted project level of control.

MSD has contracted with a hydraulic / hydrologic modeling (H/H) consultant to update and maintain a calibrated Infoworks ICM model of the combined and sanitary sewer collection systems. The model is used for the following activities:

- Planning and design of IOAP and other capital projects, including recommendations for changes to the operation of MSD's RTC system based on project impacts.
- Validation of performance of IOAP projects after construction.
- Evaluation of sewer capacity requests and proposed green infrastructure impacts on the combined and separate sanitary sewer systems.

The model is calibrated to both in-system flow monitors as well as flow monitors on CSO outfalls. MSD continues to look for ways to improve the accuracy and precision of the model by performing field surveys and reconnaissance where additional details or other critical details need clarification to refine calibration of the models.

FY17 Program

- Worked with H/H consultant to update ICM model to incorporate IOAP minor modifications.
- Worked with H/H consultant to review IOAP projects under design for validation of proposed performance.
- Worked with H/H consultant to validate performance of 24 IOAP projects under assessment, as discussed in Section 4.5.2.

FY18 Program

- Work with H/H consultant to review CSO flow monitoring data as discussed in Section 1.2.3.3.
- Work with H/H consultant to review IOAP projects under design for validation of proposed performance.
- Work with H/H consultant to validate performance of IOAP projects after construction is completed.

4.5.2 PROJECT PERFORMANCE REPORTING

As described in Volume 1, Section 6.5.2 of the 2012 IOAP Modification, dated May 2014, beginning with the FY14 Annual Report, MSD has agreed to provide annual reports on performance findings for completed projects and to self-identify cases where the performance falls below the committed level of control. In such cases, MSD will define the necessary remedial measures and schedule to improve performance to the appropriate level. It is the intent that performance analyses will be conducted for all constructed IOAP projects as monitoring data becomes available. To complete this effort and independently assess IOAP projects that have been certified to date, MSD has partnered with the University of Louisville Center for Infrastructure Research (UofL) for the majority of the IOAP projects.

Current performance reporting is updated to include additional projects certified through June 30, 2016, with data through the end of the current reporting period.

MSD committed to an analysis of twelve months of final effluent sampling to determine performance of the Derek R. Guthrie WQTC Flow Equalization and Treatment Project, which was completed July 10, 2015. For all other CSO / DWO and SSO projects, the period for monitoring performance and compliance encompasses a three-year window following construction. Green demonstration projects were determined to meet performance commitments based on reported benefit and improvement to MSD's Green Infrastructure Program, as reported in Annual Report 7. Two supplemental environmental projects (SEPs) were assessed for successful restoration.

Detailed performance status of each project is included in Table 4.6. Of the 71 projects analyzed to date, 47 have met the criteria for final committed level of control as discussed and 24 remain under assessment. Projects identified to need additional monitoring or remediation are detailed in Table 4.7. Projects that have been completed through the assessment date but have not been assessed as of the current reporting period and are detailed in Table 4.9.

Southeast Diversion Structure & Interceptor	1[1]	1,000[1]	Additional rehabilitation may be required dependent on monitoring outcomes after construction of Nightingale PS / Basin (S_SD_MF_NB06_S_13_C)	FY18

[1]FY16 Annual Report included a higher count and volume of overflow events due to comparison of rain events to a less frequent storm than the project level of control.

Table 4.9. IOAP Project Performance – Projects Requiring Assessment

PROJECT NAME	ACD PROJECT NUMBER	PROJECT CERTIFICATION DATE	PROJECT TYPE	PERFORMANCE REPORTING DISCUSSION
CSO093 Structural Modifications & Green Infrastructure	L_SO_MF_093_S_08_A_A_0	December 23, 2015	CSO	Project will be assessed during the next reporting period to provide at least one full year of monitoring data and to implement modified CSO flow monitoring procedures.
CSO108 Dam Modifications	L_SO_MF_108_S_09A_B_A_4	December 30, 2010	CSO	On review of the data it was determined that additional flow monitoring equipment would be required. This equipment will be installed in FY18 as a part of modified CSO flow monitoring procedures.
CSO140 In-Line Storage And Green Infrastructure Controls	L_MI_MF_140_S_08_A_A_0	December 23, 2015	CSO	Project will be assessed during the next reporting period to provide at least one full year of monitoring data and to implement modified CSO flow monitoring procedures.
CSO160 In-Line Storage And Green Infrastructure	L_OR_MF_160_S_08_A_A_0	December 23, 2015	CSO	Project will be assessed during the next reporting period to provide at least one full year of monitoring data and to implement modified CSO flow monitoring procedures.
Nightingale Pump Station Replacement And Storage	L_SO_MF_018_S_03_A_A	June 29, 2017	CSO	Project will be assessed during the next reporting period to provide at least one full year of monitoring data and to implement modified CSO flow monitoring procedures.
Story Avenue And Spring Street Green Infrastructure	L_SO_MF_130_S_09B_B_A_8	December 20, 2016	CSO	Project will be assessed during the next reporting period to provide at least one full year of monitoring data and to implement modified CSO flow monitoring procedures.
Anchor Estates Pump Station Eliminations 2 - Anchor Estates #1 And #2 Pump Station Elimination	S_MI_MF_NB06_M_01_A_A - 1	September 30, 2016	SSO	Project will be assessed during the next reporting period to provide at least one full year of monitoring data.
Caven Avenue Pump Station Elimination	S_PO_WC_PC09_M_09B_C	September 26, 2016	SSO	Project will be assessed during the next reporting period to provide at least one full year of monitoring data.
Prospect System Improvements 3 - ORFM System Improvements	S_OR_MF_NB04_M_03_B_B	December 19, 2016	SSO	Project will be assessed during the next reporting period to provide at least one full year of monitoring data.

4.5.3 GREEN INFRASTRUCTURE MONITORING

MSD has partnered with the EPA ORD to continue long-term green infrastructure performance monitoring for two CSO areas (CSO130 and CSO190) where green infrastructure solution alternatives have demonstrated more favorable benefit/cost ratios than overflow storage basins. The CSO190 Green Infrastructure Project is nearing completion. A significant amount of monitoring data has been compiled to document the green infrastructure infiltration rates, effectiveness of maintenance practices, and impact on overflow reduction. The monitoring data collected for CSO130 has proven to be valuable in developing an effective regular maintenance program. EPA ORD has continued to be involved in green infrastructure monitoring data in the CSO190 basin, beginning with the installations in November 2015. Both UofL and EPA ORD will be reviewing field monitoring data for these IOAP projects to ascertain overflow reduction performance. PCCM findings for these projects will be included in the annual report subsequent to project certification as updated flow monitoring data is available. Should their findings show that MSD has not achieved the proposed level of control, an action plan will be developed.

4.5.4 WATER QUALITY SYNTHESIS REPORT

Every two years, MSD publishes a synthesis report, called “State of the Streams”, that summarizes water quality trends based on data MSD collects through its Long-Term Monitoring Network. The 2016 report is available at **http://www.louisvillemsd.org/WaterQuality**. MSD continues to synthesize and trend water quality data in a report as required by the MS4 permit.

SECTION 5: PUBLIC OUTREACH, EDUCATION, NOTIFICATION AND PARTICIPATION

5.1. PUBLIC NOTIFICATION PROGRAM

MSD produced and distributed a number of products aimed at notifying the community on the objectives of Project WIN and how to lessen the risks associated with coming into contact with sewage overflows. The following activities occurred during the reporting period or are scheduled to occur in the next reporting period.

5.1.1 OVERFLOW ADVISORY SIGNS

FY17 Program

- Updated sign inventory to ensure all needed signs are in place.
- Completed the annual sign inspection process on March 15, 2017. There were 1,176 signs inspected, 892 signs cleaned, and 111 replaced.

FY18 Program

- Perform an evaluation comparing the documented overflows with existing sign locations to ensure all needed signs are in place.
- Schedule the Annual Sign Inspection process.

5.1.2 ELECTRONIC NOTIFICATIONS

FY17 Program

- Continued to utilize the Louisville Metro e-mail alert system to notify customers who voluntarily signed up to receive email alerts regarding sewer overflows and to broadcast messages to the public.
- Provided notification on thirteen dry weather unauthorized discharges of more than 1,000 gallons.

FY18 Program

- Continue email alerts to customers who signed up to receive the information.

5.1.3 PRINT NOTIFICATIONS

FY17 Program

- Mailed 1,576 Project WIN information packets to customers who called with questions about the Amended Consent Decree – specifically regarding overflows, discharges, plumbing modification and the surcharge fee.
- In April 2017, distributed the annual mailing to residents within 500 feet of Beargrass Creek and the Ohio River, advising the use of caution around streams during and immediately following rain events as they may contain untreated sewage. A copy of the letter to residents is provided in Appendix F.

- Provided annual notification to community at large in the Courier Journal in a newspaper advertisement to use caution around streams during and immediately following rain events as they may contain untreated sewage. A copy of the notification is provided in Appendix F.
- Sent 296 public outreach letters to residents in areas that have Fats, Oil and Grease (FOG) issues. The FOG message, included on the reverse of these letters, is provided in Appendix F.
- Included "Aging Infrastructure" print campaign with February / March 2017 billing, provided in Appendix F.

FY18 Program

- Continue to mail Project WIN information packets to customers who call with questions about the Amended Consent Decree – specifically regarding overflows, discharges, plumbing modification and the surcharge fee.
- Continue to send out FOG residential public outreach letters to areas that have FOG issues.
- Provide annual notification and informational material to the community, providing a general overview and awareness relating to public health impacts associated with sewer overflows and an update of Project WIN initiatives by May 1, 2018.
- Distribute, prior to May 1, 2018, the annual mailing to residents within 500 feet of Beargrass Creek and the Ohio River, advising the use of caution around streams during and immediately following rain events as they may contain untreated sewage.

5.2. PUBLIC EDUCATION PROGRAMS

MSD has developed a public education program aimed at expanding the public's knowledge on MSD's primary business functions of wastewater, stormwater and flood protection, with an emphasis on Project WIN Program elements. The following activities occurred during the reporting period or are scheduled to occur in the coming fiscal year.

FY17 Program

- Continued to identify areas of public knowledge requiring additional effort and attention and target public education efforts to fill the gaps.
- Continued to provide information on MSD's Green Infrastructure incentive programs, Louisville's tree canopy, sewer overflow prevention, pollution prevention and other topics, including the events listed in Table 5.1.
- Included Consent Decree compliance, wastewater facility upgrades, and aging infrastructure as key topics in the Critical Repair & Reinvestment Plan public meetings and posts on MSD's website and social media accounts.
- Released monthly social media ads containing messages related to upcoming IOAP project public meetings. Released posts on topics including environmental awareness, outreach programs, events, health and safety, and public meetings. Public outreach campaigns supported included World Environment Day, World Oceans Day, Pollinator Week, Skills USA, and Ohio River Sweep. Weekly social media campaigns consisted of the following:

- Fun Fact Mondays – shared the benefits of green infrastructure and sewer overflow prevention.
- Do's/Don'ts/Tips Tuesdays – encouraged activities and behaviors that have a positive impact on water quality; discouraged activities and behaviors that have a negative impact on local water quality. This campaign included tweets about the proper way to dispose of pharmaceutical products, pet waste, wipes, dental floss and other household products.
- Value of Water Wednesdays – shared the benefits of fostering good water quality.

FY18 Program

- Continue to re-tool public education efforts to address areas of public knowledge requiring additional effort and attention.
- Continue to provide information through social media platforms.

Table 5.1. Public Education Workshops and Activities

DATE(S)	EVENT	BENEFIT / RELEVANCE / IMPACT
July 18, 2016 – July 29, 2016	Homearama	Provided Rain Barrels, Information on Native Plants and Rain Gardens, as well as Information on MSD Programs and Projects required by the Consent Decree
September 10, 2016	Waterfront Botanical Gardens Generation Fair	MSD Staff discussed water quality topics such as rain gardens and how native plants can improve water quality.
September 29, 2016	Canoemobile at Riverview Park	Raised awareness about local water quality by featuring MSD's participation in water quality testing with local students.
October 10, 2016 – October 13, 2016	Adventures in Water	Raised awareness about stormwater quality by featuring MSD's Enviroscape presentations to local students
February 28, 2017	Construction Field Day 2017	Encouraged attendees to attend a rain garden presentation
March 3, 2017 – March 6, 2017	Home, Garden and Remodeling Show 2017	Encouraged attendees to learn about the benefits of rain gardens, rain barrels and trees.
April 17, 2017 – April 21, 2017	Mayor's Give A Day Week of Service	Raised awareness about the benefits of green infrastructure at one tree planting and two days of cleaning along Beargrass Creek.
April 19, 2017	Rain Garden Workshop	Raised awareness about the benefits of rain gardens by featuring a rain garden installation at local school – Maupin Elementary "Farm Day".
April 22, 2017	Floyds Fork Stream Cleanup	Raised awareness about the role the public can play in ensuring good water quality.
June 17, 2017	Family Farm & Forage Day	Encouraged attendees to learn about the benefits of rain gardens, rain barrels and trees.
June 17, 2017	Ohio River Sweep 2017	Raised awareness about the role the public can play in ensuring good water quality.
June 20, 2017	Summer Reading Program - "Understanding Our Watersheds"	Discussed how human actions can impact the quality of our local waterways as well as ways that students can take steps to reduce pollution loading to receiving water bodies.
June 29, 2017	Summer Reading Program - "Understanding Our Watersheds"	Discussed how human actions can impact the quality of our local waterways as well as ways that students can take steps to reduce pollution loading to receiving water bodies.
Ongoing	IOAP Project & Program Meetings	Encouraged Twitter users to attend our public meetings concerning MSD's IOAP projects and program

5.2.1 RADIO AND TV ACTIVITIES

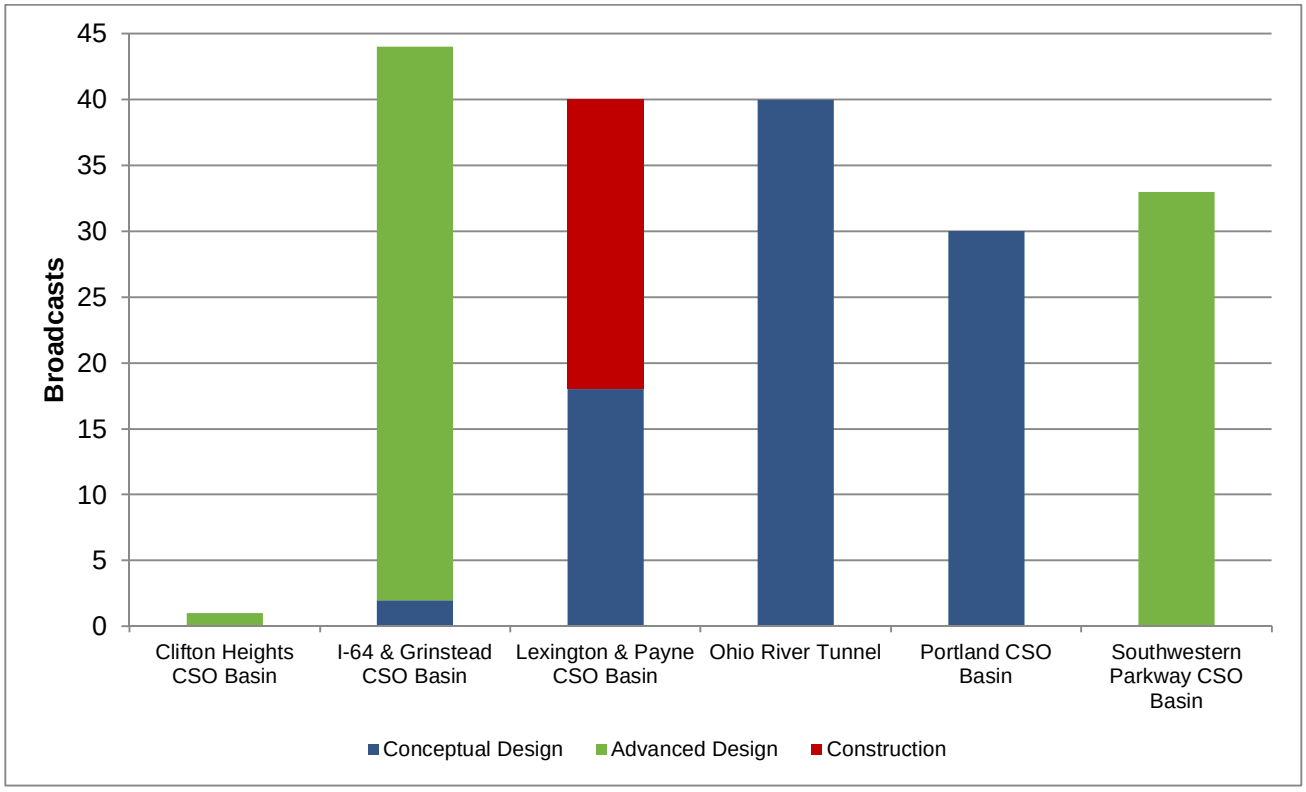
FY17 Program

- Coordinated with Metro TV (Channel 25) to air 188 broadcasts of public input meetings as shown in
- Figure 5.1.

FY18 Program

- Continue to utilize various media outlets, including TV, radio and the newspaper, to serve as a conduit for disseminating information to the public.
- Continue coordination with Metro TV to show IOAP project public input meetings and special interest material.

Figure 5.1. Metro TV Broadcasts



5.2.2 PRINTED MEDIA ACTIVITIES

FY17 Program

- Purchased public service advertising messages in Business First and Louisville Magazine, provided in Appendix F.
- Provided printed copies of the StreamLine to 700 customers and staff each month. Posted the Streamline to Twitter and Facebook accounts. Project WIN related articles are contained in each issue of this newsletter. These publications are available on the MSD Website. Online versions of the StreamLine newsletter can be viewed at http://www.msdlouky.org/aboutmsd/updatenews.htm.

FY18 Program

- Continue to utilize various media outlets, including TV, radio and the newspaper, to serve as a conduit for disseminating information to the public.
- Continue to send the MSD Streamline to customers and staff each month.

5.2.3 PROJECT WIN AND GREEN WEBSITES

FY17 Program

- Continued to post Project WIN information on the website. On MSD's homepage, the Overflow Advisory Level indicator provides important information on the condition of area streams and shows a warning if overflows are likely to be happening or have happened in the past 48 hours. The Overflow Advisory Indicator includes a link to the Project WIN website, which includes a repository of public documents related to Project WIN, tips for customers to help control overflows through their personal actions, information about the history and background of Project WIN and a place to sign up for overflow advisory emails warning when significant precipitation has caused overflows in MSD's system. The Project WIN website can also be accessed by navigating through the Consent Decree link on MSD's homepage. This website can be found at **www.msdprojectwin.org**.
- Continued communication with customers via posts on MSD's social media platforms.

FY18 Program

- Continue to post Project WIN information on the website.
- Continue to post communication with customers via MSD's social media platforms.

5.3. PUBLIC OUTREACH PROGRAMS

MSD has developed a public outreach program aimed at involving the public on MSD's primary business functions with emphasis on wastewater, stormwater and flood protection. The following activities occurred within the current reporting period or are scheduled to occur in the coming fiscal year.

5.3.1 GREEN INFRASTRUCTURE WORKSHOPS AND ACTIVITIES

FY17 Program

Presented, attended, and/or facilitated meetings in Table 5.2 related to green infrastructure.

FY18 Program

- Schedule rain garden workshops at various times throughout the year.
- Continue planning for additional signage for green demonstration sites and green partnership locations.
- Continue planning of internal and external workshops explaining the Green Infrastructure Program, including the next Construction Field Day and classes on green infrastructure design, construction and inspection.

Table 5.2. Green Infrastructure Workshops and Activities

DATE(S)	EVENT	BENEFIT / RELEVANCE / IMPACT
October 4, 2016	Water Wonders	Gave a hands-on demonstration with the Enviroscape watershed model, which provides participants with the understanding of how human activities can impact water quality. Discussed the impacts rainfall can have on stream health, such as sewer overflows and urban runoff, and then provide information on how to mitigate those impacts through behavior change.
November 9, 2016	Urban Design Studio Class	Presented on stormwater quality and green infrastructure.
December 10, 2016	Riparian Restoration and Tree Planting	Coordinated and staffed an event where volunteers planted bare root saplings on a vacant, flood prone property along Cedar Creek.
February 4, 2017	Metro Parks Landowner Workshop - Historic Locust Grove	Presented on how residential property owners can better manage stormwater on their own properties, including information on rain gardens, native plants, and rain barrels.
February 28, 2017	MSD Field Day	Planned and staffed the annual Field Day event where industry stakeholders are given an opportunity to interact directly with staff and ask questions about key projects and initiatives, such as major consent decree work and current MS4 issues.
March 3, 2017 – March 5, 2017	Home & Garden Show	Staffed a booth at the Home & Garden Show and communicated directly with the public on current issues facing MSD, discussed how the work MSD is doing impacts their lives, and how their dollars are being put to use to construct projects that improve the local environment.
March 21, 2017	Environmental Stormwater Presentation at Fairdale Public Library	Gave a hands-on demonstration with the Enviroscape watershed model, which provides participants with the understanding of how human activities can impact receiving water quality.
April 21, 2017	Riparian Restoration and Tree Planting	Coordinated and staffed an event where volunteers planted bare root saplings on a vacant, flood prone property along Cedar Creek.
April 21, 2017	Joe Creason Park Tree Planting Event	Planted several trees in Joe Creason Park in the Beargrass Creek watershed in partnership with Louisville Metro.
May 13, 2017	How-To Festival	Provided attendees information on how to construct a residential rain garden.
June 17, 2017	Family Farm & Forage Day	Gave a hands-on demonstration with the Enviroscape watershed model, which provides participants with the understanding of how human activities can impact receiving water quality.

5.3.2 CLEAN STREAMS WORKSHOPS AND ACTIVITIES

FY17 Program

Activities related to the current reporting period are detailed in Table 5.3.

FY18 Program

- Continue to facilitate stream cleanup events and workshops.
- Continue work with Beargrass Creek Alliance to mark catch basins in critical areas.

Table 5.3. Clean Streams Workshops & Activities

DATE(S)	EVENT	BENEFIT / RELEVANCE / IMPACT
April 17, 2017	Give A Day - Beargrass Creek Stream Clean Up	Coordinated and staffed an event to promote environmental stewardship and awareness where volunteers walked along the banks of Beargrass Creek along the Beargrass Greenway to remove trash near the stream.
April 19, 2017	Give A Day - Beargrass Creek Stream Clean Up	Coordinated and staffed an event to promote environmental stewardship and awareness where volunteers walked along the banks of Beargrass Creek along the Beargrass Greenway to remove trash near the stream.
April 20, 2017	KSPE Convention - MS4 Presentation	Gave a presentation to a statewide audience of engineers and water professionals on the MS4 stormwater quality program.
April 22, 2017	Floyds Fork Stream Cleanup	Coordinated and staffed an event to promote environmental stewardship and awareness where volunteers walked along the banks of Floyd's Fork in Beckley Creek Park to remove trash near the stream.
June 17, 2017	Ohio River Sweep	Facilitated the Ohio River Sweep at the Louisville riverfront.
Throughout the Year	Beargrass Creek (BGC) Alliance	Assisted in marking catch basins in critical areas.

5.3.3 OUTREACH ACTIVITIES FOR STUDENTS

FY17 Program

Attended or presented at the student-centered events detailed in Table 5.4.

FY18 Program

- Continue to coordinate with Parklands of Floyds Fork on educational partnerships at the Floyds Fork WQTC, including field trips with The Parklands and Louisville Water Company at Floyds Fork WQTC.
- Continue to work with UofL to identify educational opportunities for college students.

Table 5.4. Outreach Activities for Students

DATE(S)	EVENT	BENEFIT / RELEVANCE / IMPACT
September 29, 2016	Canoemobile	Discussed water quality topics with students, what impacts the CSS can have on receiving waterways, and how they can improve water quality through behavior change.
October 4, 2016	Floyds Fork Educational Tour – Shelby County High School	Planned, coordinated, and staffed a tour for local high school environmental students to learn about how a treatment plant works to clean sewage before it is discharged to a stream. Staff also discussed stormwater topics at this event.
November 17, 2016	Floyds Fork Educational Tour – Holy Cross High School	Planned, coordinated, and staffed a tour for local high school environmental students to learn about how a treatment plant works to clean sewage before it is discharged to a stream. Staff also discussed stormwater topics at this event.
November 21, 2016	Environmental Monitoring and Water Quality - Noe Middle School	Taught an environmental science class, covering environmental data and indicators for stream health.
February 15, 2017	Floyds Fork Educational Tour – Central High School	Planned, coordinated, and staffed a tour for local high school environmental students to learn about how a treatment plant works to clean sewage before it is discharged to a stream. Staff also discussed stormwater topics at this event.
March 21, 2017	Floyds Fork Educational Tour – Bellarmine University	Planned, coordinated, and staffed a tour for local high school environmental students to learn about how a treatment plant works to clean sewage before it is discharged to a stream. Staff also discussed stormwater topics at this event.
March 22, 2017	Community Engagement Calendar - UofL Engineering - Sustainability Graduate Class	Presented on current issues facing MSD and the need to obtain new funding in order to maintain the public health and safety benefits provided by MSD's major systems, such as: the flood protection system, the water quality treatment centers, and the collection and stormwater systems.
April 12, 2017	Floyds Fork Educational Tour – Shawnee High School	Planned, coordinated, and staffed a tour for local high school environmental students to learn about how a treatment plant works to clean sewage before it is discharged to a stream. Staff also discussed stormwater topics at this event.
April 19, 2017	Rain Garden Workshop at "Farm Day" - Maupin Elementary	Gave a presentation to elementary school students that included hands-on activities intended to promote awareness of native plants and the ways that they can positively impact the environment and water quality.

5.3.4 IOAP PROJECT AND PROGRAM MEETINGS

MSD has developed a partnership with Louisville Metro for providing project information and soliciting feedback from stakeholders using a Structured Public Involvement approach. Structured Public Involvement is meant to facilitate relevant input on the design process as MSD prepares to design and construct CSO basins. Our current IOAP outreach activities and public meetings are using this process to elicit qualitative and quantitative information and enhance our engagement with customers. The Structured Public Involvement approach assures anonymity for each participant using transceivers to compile data which can then be correlated on a customer-specific basis. The plan for Structured Public Involvement includes implementing a four-meeting process that leads stakeholders through the project design stages as illustrated in Figure 5.2. Online surveys are also being made available to allow those not in attendance at public meetings to provide similar project-specific input. Creating this secondary online opportunity has been successful and generated responses that otherwise would not have been accounted for at the public meetings. Additional information regarding the Structured Public Involvement Process and meetings held during this reporting period may be found at the Project WIN Public Input Website (**www.msdprojectwin.org/Public-Input.aspx**).

FY17 Program

Facilitated the events detailed in Table 5.5.

FY18 Program

- Continue to facilitate and document IOAP Project Public Input Meetings.
- Continue to inform the Wet Weather Team on the progress of the IOAP implementation by hosting two Wet Weather Team meetings per year.
- Continue to provide information from the Wet Weather Team Stakeholders Group and IOAP Public Input meetings on the Project WIN website, at **www.msdlouky.org/projectwin**.

June 27, 2017	Portland CSO Storage Basin Construction

SECTION 6: CAPACITY MANAGEMENT OPERATIONS AND MAINTENANCE REPORT

6.1. CAPACITY MANAGEMENT OPERATIONS AND MAINTENANCE PROGRAM ACTIVITIES

Per Paragraph 24.c of the Amended Consent Decree, the Capacity Management Operations and Maintenance (CMOM) Self-Assessment Report was submitted to the Environmental Protection Agency (EPA) and Kentucky Department of Environmental Protection (KDEP) on February 10, 2006. MSD received a letter of approval on August 22, 2006. The approved CMOM document can be viewed on the Project WIN website www.msdlouky.org/projectwin. Highlights of the CMOM program implementation during the reporting period are outlined below.

6.1.1 MANAGEMENT PROGRAMS

6.1.1.1. TABLE OF ORGANIZATION

This section describes MSD's Table of Organization. The goal of this section is to ensure each department works efficiently and cooperatively by clearly defining each department's role in the organization in terms of authority, function, position, duties, and relation to other departments. This section also identifies positions currently budgeted and filled.

M-A-1 Organizational Chart

The Louisville MSD Organizational Chart is updated every quarter. See Appendix G for the latest version.

M-A-2 Relationship to Other Departments

FY17 Program

- Carried 681 approved positions at the beginning of the reporting period and 685.5 approved positions at the end of the reporting period. This is an increase of 4.5 positions.
- Carried 75 vacant positions at the beginning of the reporting period and 56.5 vacant positions at the end of the reporting period.

FY18 Program

- Continue to hire staff to fill vacant positions
- Procure services of executive recruiter to find qualified candidates to fill specialty and senior/mid/upper management positions critical to the success of the Amended Consent Decree (ACD).

6.1.1.2. TRAINING PROGRAMS

This section describes MSD's Training Programs. The goal of this section is to ensure employee growth and workplace safety through mandatory training (both initial and ongoing), conference and seminar attendance, certification, accurate record keeping of employee training, and incentives such as pay, promotions and ability to work. All training programs promote MSD's fundamental mission, goals, and policies.

M-B-1 Technical Training
M-B-2 Skills Training
M-B-3 Safety Training

FY17 Program

- Training for the reporting period is detailed in Figure 6.1 and Figure 6.2.
    - Conducted Administrative Training sessions including such topics as New Employee Orientation, Project Management, Leadership, Records Retention, Crew Management, Supplier Diversity Procurement Procedures, and Ethics.
    - Conducted Collections System training sessions including such topics as Sewer Overflow Response Protocol, Erosion Prevention & Sedimentation Control, Stormwater Pollution Prevention Plans (SWPPP) Training, Combined Sewer Overflow (CSO) & Siphon Preventative Maintenance, Sewer Cleaning, and Construction Blueprints.
    - Conducted Reporting training sessions including such topics as Crystal Reports, Telog, Budget Software and eB basics.
    - Conducted Equipment training primarily including heavy equipment that enables employees to maintain and operate the collections system, pump stations and treatment plants. Examples include training on mini-excavators, sewer cleaners, cranes, forklifts and backhoes.
    - Conducted Wastewater Operations training focusing on knowledge and skills related to wastewater treatment process and control, including sampling, Louisville Green Management System training, and Wastewater Lab Certification Preparation.
    - Conducted safety training in such areas as Traffic Control, Hearing Protection, Confined Space Entry, Blood borne Pathogens, Hazmat, Lock Out/Tag Out, and Competent Person training for trenching and excavation.

FY18 Program

- Continue to develop competent and capable employees through technical and skills training related to job duties.
- Continue to implement employee performance-based goals as part of annual appraisal process and utilize performance results to identify additional training needs.
- Develop processes to better link organizational goals to individual employee goals.
- Continue to train employees of MSD Standard Safety Procedures.

Figure 6.1. Training Programs - Sessions

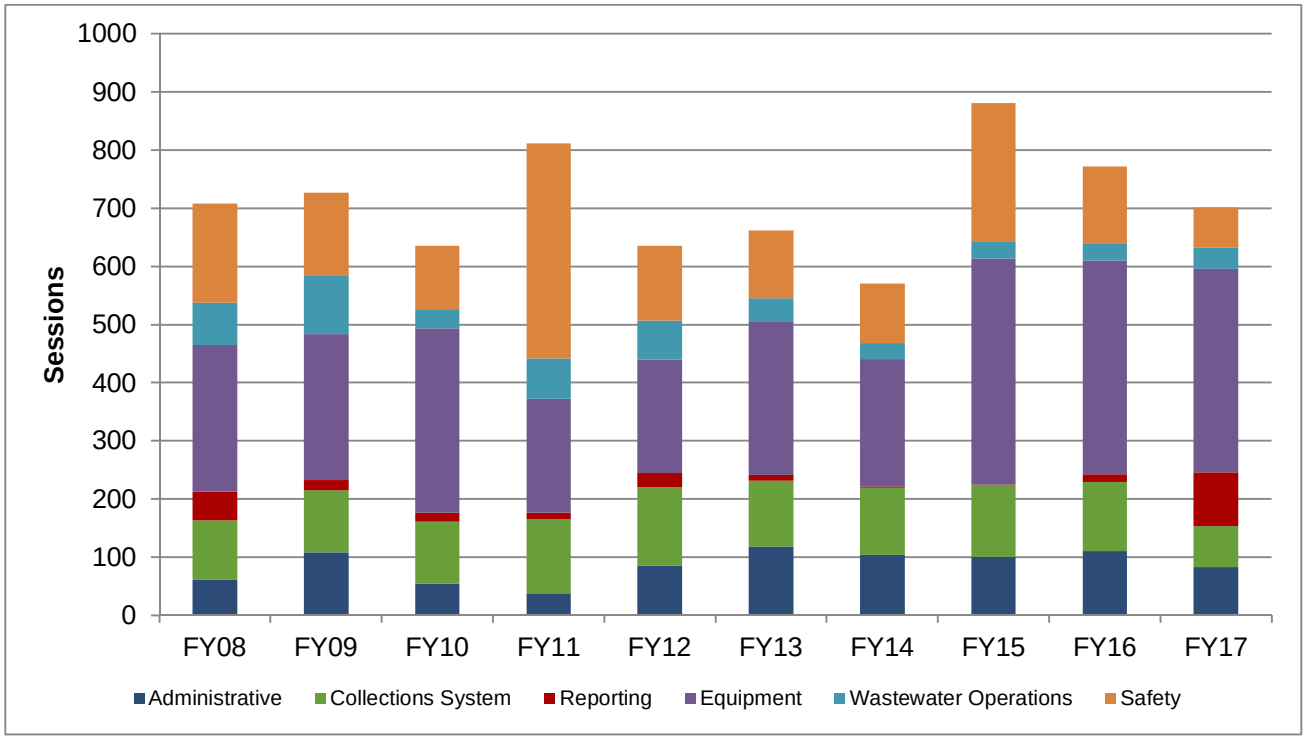

Figure 6.2. Training Programs - Hours

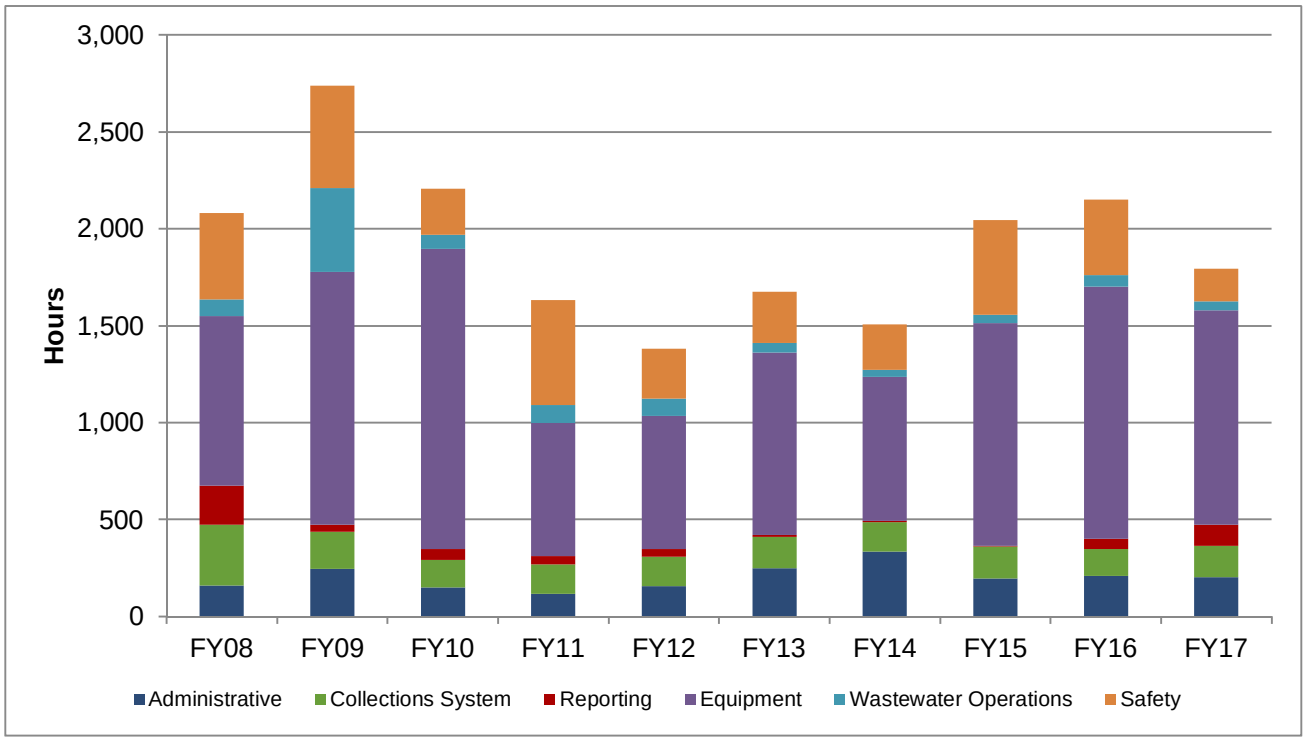


6.1.1.3. SAFETY PROGRAMS

This section describes MSD's Safety Programs. The goal of this section is to eliminate on-the-job injuries. MSD's Safety Programs include safety committees, confined space entry procedures, district wide safety policies, traffic management, lock out/tag out procedures, and proper use of safety equipment.

M-C-1 Safety Committee

FY17 Program

- Conducted quarterly meetings with the Safety Committee. This Committee includes representatives from across the Operations Division, including Treatment, Collections System, and Drainage and Flood Protection representatives.
- Performed random job site inspections on Drainage/Sanitary crews, inspections at Morris Forman WQTC, and quarterly inspections with Operations of WQTCs and flood & viaduct pump stations.

FY18 Program

- Continue Safety Committee meetings to perform inspections and review policy and incidents. Address safety concerns presented by safety committee members.
- Continue to improve safety culture with monthly meetings of the CMF Safety Committee, Treatment Safety Committee, and Collections Safety Committee. Adapt to changes presented during continued reorganization and maintain a focus on safety culture that includes all personnel.

M-C-2 Confined Space Entry

FY17 Program

- Conducted confined space entry training in accordance with the OSHA Confined Space Entry standard 29 CFR 1910.146 for new employees, and on an "as needed" basis for existing employees who have job descriptions requiring confined space entry.
- Maintained entry equipment and personal protective equipment to provide for safe entry conditions and to maintain compliance with 29 CFR 1910.146.
- Contracted with vendor to conduct annual inspections on confined space entry equipment such as tripods, wenches and harnesses.

FY18 Program

- Continue to administer training and monitor procedures on confined space entry in order to maintain compliance with 29 CFR 1910.146. Health and Safety personnel will spot-check confined space entries to determine compliance with company procedure.
- Continue to ensure that all "Climb Down Lift Stations" in Metro Operations are correctly labeled as "Confined Spaces" and not "Permit Required Confined Spaces" and that all new stations are properly labeled when installed.
- Continue to advise personnel on the purchase of multi-gas monitors to replace older models that will no longer be maintained or manufactured.

- Continue to assess confined space monitor calibration status and purchase calibration gas for the six calibration stations.
- Revise the calibration station software to remove chlorine and sulfur dioxide from the monthly calibration program, due to their removal from the operational processes at the treatment plants.
- Purchase new monitors and docking stations in Treatment and Collections to meet expected needs of future personnel and operational changes.

M-C-3 General Safety Procedures

FY17 Program

- Established various general safety procedures based on both 1910 & 1926 OSHA regulations, input from internal personnel, and on the specific needs of the district in order to maintain regulatory compliance and provide safe working procedures for employees.
- Conducted Emergency Response Team (ERT) fire drills and tornado drills at the Main Office, Central Maintenance Facility and Morris Forman Water Quality Treatment Center.
- Conducted 8-hour refresher training on Hazardous Materials for the Emergency Response Teams.
- Conducted fire extinguisher training district-wide.
- Conducted annual audiograms district-wide.

FY18 Program

- Continue to conduct training with employees on the new OSHA Hazardous Communications Standard to include Globally Harmonized Systems for material safety data sheets and container labeling.
- Continue to assess the need to update existing procedures and/or create new procedures as conditions and regulatory requirements dictate.
- Continue to conduct 8-hour refresher training on Hazardous Materials for the Emergency Response Teams.
- Continue to conduct fire extinguisher training district-wide.
- Continue to conduct fire and tornado drills.
- Continue to conduct annual audiograms district-wide.
- Schedule 40-hour HAZ-MAT Technician Level training for newly hired employees as needed based on hiring demands.
- Enhance compliance objectives based on NFPA 70E (Arc Flash) by conducting an initial arc flash study at one of the flood pump stations in service and hire a senior electrical engineer.
- Replace current Material Safety Data Sheets in the MSDS Pro database with updated safety data sheets compliant with the Globally Harmonized System (GHS) standard.

- Continue required safety orientations with contractors to ensure compliance with MSD & KYOSHA regulations and promote a strong safety culture.

M-C-4 Traffic Management

FY17 Program

- Purchased and maintained traffic control equipment to reduce hazardous operational exposure.
- Provided training on traffic control during licensing and equipment operating training, conducted as employees are hired or as employee job duties require.

FY18 Program

- Continue traffic control training for employees to ensure continued compliance with MSD standards.
- Inspect and replace traffic control equipment regularly to ensure compliance with safety standards.

M-C-5 Lock Out/Tag Out

FY17 Program

- Enhanced lock out/tag out procedures as required by the OSHA Control of Hazardous Energy standard. Procedures are maintained and communicated to employees.
- Developed lock out/tag out procedures as equipment was added or replaced, or as processes were changed.

FY18 Program

- Implement lock out/tag out procedures as equipment is added or replaced, or as processes are changed.
- Work with staff at Morris Forman WQTC to enhance existing program by reviewing and documenting existing procedures. These SOPs will then be converted to an electronic database for improved accessibility.

M-C-6 Safety Equipment

FY17 Program

- Continued to review and provide required personal protective equipment to employees.
- Conducted NFPA 1852 required annual testing and maintenance for self-contained breathing apparatus respirators.

FY18 Program

- Maintain safety related equipment or replace the equipment per governing policies or as the need arises.
- Assist MSD Operations Division with the purchase of additional confined space escape bottles.

- Explore options for more comfortable safety equipment to maintain employee adherence to safety policies and procedures.

M-C-7 Performance Measures

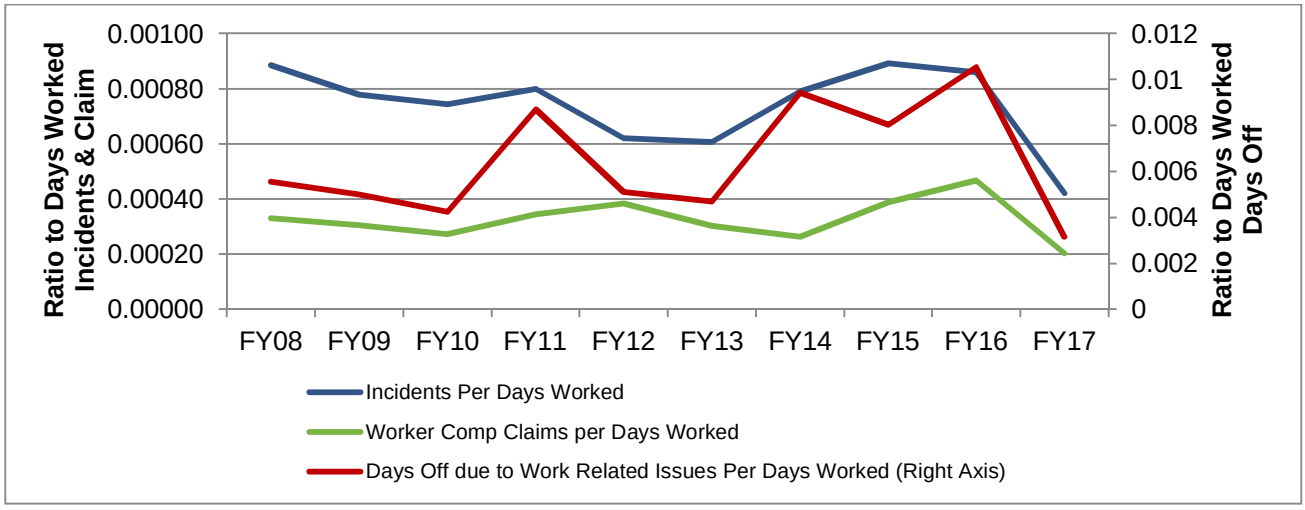
FY17 Program

- Maintained compliance with OSHA standards.
- Ensured that appropriate staff attended mandatory training on trench excavation safety, confined space, first aid, hazmat response and fire extinguisher usage.
- Safety / worker compensation metrics for MSD employees are detailed in Table 6.1 and Figure 6.3.

Table 6.1. Safety Incidents and Worker Compensation Claims

FY	DAYS WORKED (8 HOURS)	SAFETY INCIDENTS	WORKER COMP CLAIMS	DAYS OFF DUE TO WORK RELATED ISSUES
FY08	142,242	126	47	789
FY09	141,564	110	43	707
FY10	146,499	109	40	623
FY11	151,272	121	52	1317
FY12	151,605	94	58	773
FY13	145,302	88	44	681
FY14	144,178	114	38	1,357
FY15	141,353	126	55	1,134
FY16	143,113	123	67	1,507
FY17	152,175	64	31	482

Figure 6.3. Safety Performance Rate Trends



FY18 Program

Mitigate the adverse trends shown through the reporting period by completing the following activities:

- Maintain field inspections as discussed under M-C-1 Safety Committee to reduce the number of incidents.
- Continue to improve compliance with NFPA 70E and the GHS standard as discussed under M-C-3 General Safety Procedures.
- Continue to foster a strong culture of workplace safety.

6.1.1.4. UTILITY INFORMATION MANAGEMENT SYSTEMS

This section describes MSD's Utility Information Management System. The goal of this section is to produce quality information regarding sewer system performance. MSD's Utility Information Management System supports the following programs: management, operations, maintenance, complaint management, and performance indicators.

M-D 1 Management Information Management Systems
M-D-2 Operations Information Management Systems
M-D-3 Maintenance Information Management Systems
M-D-4 Complaint Management and Tracking Information Management Systems
M-D-5 Performance Indicators

FY17 Program

- Completed Security and Active Directory upgrades recommended by 2016 External IT Audit.
- Completed Phase I implementation of Cedar Creek Data Backup and Disaster Recovery implementation.
- Installed new VMWare Virtual server hardware in the Disaster Recovery site.
- Completed maintenance and update of the local geodetic survey control network to support FEMA CRS, MSD projects and local development.
- Continued migration to tracking capital project performance measures and milestones through SharePoint.
- Upgraded the LOJIC GIS Floodplain Determination application to report permits, Local Regulatory Floodplain and Continuing Sewer System Assessment (CSSA) information.
- Utilized a wide variety of software to operate the day to day business activities associated with wastewater collections, conveyance and treatments. The major Utility Information Management (UIM) applications are shown in Table 6.2.
- Continued enhancement of the Project WIN website with updated information related to the Amended Consent Decree: General site statistics are included in Table 6.3.
- Strived to provide network availability 24 hours per day, 7 days per week, 365 days per year.

- Maintained a helpdesk system to track and respond to requests from users.

FY18 Program

- Upgrade the Hansen Oracle Database to Oracle version 11g.
- Migrate 20 MSD custom written operations applications to a new Oracle 11g Oracle Database.
- Complete the replacement of all Windows 2003 Servers.
- Upgrade GIS databases, HARP and all MSD web-based GIS applications to ArcGIS 10.5.
- Deploy redundant GIS database in Oracle to support 24/7 web applications.
- Continue migration to tracking capital project performance measures and project milestones through SharePoint.
- Revise and document procedures for dry weather overflow notifications out of Telog monitoring system.
- Complete Phase II of Cedar Creek Data Backup and Disaster Recovery implementation.
- Complete Datacenter Co-Locate Project with Peak 10.

Table 6.2. Utility Information Management (UIM) Applications

UTILITY INFORMATION MANAGEMENT (UIM) APPLICATIONS			
eB	OneRain	GIS (HARP)	Performance Measures
Crystal Reports	SAP	EGIS	SCADA
Hansen	Telog	GPS	LIMS
FASTER	SharePoint		

Table 6.3. Project WIN Site Statistics

METRIC	FY11	FY12	FY13	FY14	FY15	FY16	FY17
Number of Visits:	139,919	89,753	93,326	109,689	149,677	155,790	156,546
Average Number of Visits Per Day:	383	380	256	301	408	428	427
Average Visit Duration (minutes):	31	20	6	10	15	8	8
Unique Visitors:	38,371	31,387	12,714	31,155	38,649	40,029	47,172
One-time Visitors:	28,822	23,115	7,224	16,855	25,416	25,960	33,741
Repeat Visitors:	9,549	8,272	7,749	14,270	13,233	14,069	13,431
Average Visits per Visitor:	3.65	2.85	2.52	3.52	3.93	3.71	3.38

- Complete SAP Hosting Project with V3IT.
- Continue to work on the migration to tracking capital project performance measures and milestones through SharePoint.

6.1.1.5. ENGINEERING PROGRAMS

This section describes MSD's Engineering Capacity Management Operations and Maintenance (CMOM) activities. The goal of this section is to maintain accurate plans of current sewer system infrastructure, oversee construction quality of new infrastructure, and conduct assessments to maximize the efficiency of current WQTCs. MSD's engineering programs include the following: collections and transmission system plans, system inventory, mapping, sewer system design, sewer construction, construction inspection, acquisition considerations, continuing sewer system assessment (CSSA), infrastructure rehabilitation, and a system capacity assurance plan (SCAP).

M-E-1 Collection and Transmission System Plans

M-E-2 System Inventory

M-E-3 Mapping

MSD has an extensive collection of record drawings of the sewer facilities dating back to 1874. In addition to the original record drawing, a scanned image is stored in eB, MSD's records management system. Plans are scanned twice during a project life cycle – once when the project is approved for construction and a second time when the plans are made "as-built" after construction completion. After a set of plans has been constructed, the facilities are created in GIS and the attributes of the facilities are stored in a corresponding asset record in the Hansen database. Map corrections are also obtained during asset inspection activities described in Appendix E.

FY17 Program

- Captured assets in the GIS and asset management software. Added 1,290 property service connection records and 105,123 feet of sewer records.
- Corrected 60 sewer errata.
- Scanned 258 construction plan sets into the eB Imaging System.
- Launched the upgraded version of HARP, called Upstream. Conducted training sessions to bring employees up to speed on the enhancements in Upstream.

FY18 Program

- Continue to scan plans and to add and update data in the GIS and asset management software based on new construction drawings and feedback from MSD field personnel.
- Update the GIS sewershed layer as projects are completed to support SCAP implementation.

M-E-4 Sewer System Design

FY17 Program

- Published the final version of the Green Infrastructure Chapter of the Design Manual (Chapter 18) in January 2017, incorporating MSD's most recent lessons learned on Green Infrastructure implementation in Louisville.
- Continued to hold the Qualified Post-Construction Inspector (QPCI) training course, which includes a 4-hour training course and qualifying exam that participants must pass to become a certified QPCI. All green infrastructure projects are required to submit an annual inspection by a QPCI to verify continued on-site stormwater management.
- Continued use of new AutoCAD templates available on the MSD public webpage, including new AutoCAD 3D templates, for use by private firms as well as in-house design.

FY18 Program

- Continue to review and update the MSD Design Manual.
- Continue to administer training on the green infrastructure review and inspection process.

M-E-5 Sewer Construction
M-E-6 Construction Inspection

FY17 Program

- Maintained the practice on significant capital projects to utilize the design engineer as the engineer of record or resident project representative (RPR).
- Continued reviews and revisions of the Construction Inspector Field Handbook.
- Expanded the Construction Inspection division to include one manager, two supervisors, and 16 construction inspectors at the end of the reporting period. This growth enabled MSD to bring more inspection services in-house and minimize the need for contracted inspection services. Utilized contract inspectors to supplement in-house inspection services as needed.

FY18 Program

- Continue construction inspection activities in-house and continue to supplement with contract inspection as needed.
- Continue acquisition of RPR services for significant capital projects.
- Continue review and updates of the Construction Inspector Field Handbook.
- Fill additional vacant construction inspection position to better provide in-house inspection services.

M-E-7 Acquisition Considerations

FY17 Program

- Financed capital expenditures of $185,966,874.

- Committed professional services funds of $10,726,967.
- Committed construction funds of $141,930,789.
- Awarded construction contracts valued at $ 145,072,923.
- Processed total change orders equaling $10,173,124.

FY18 Program

- Budget for capital expenditures up to $195,000,000.
- Monitor expenditures related to professional services and construction.

M-E-8 Continuing Sewer System Assessment

Refer to Appendix E for details on the CSSA activities for the reporting period.

M-E-9 Infrastructure Rehabilitation

Refer to Section 4: Program Activities for Discharge Abatement Plans for more details on infrastructure rehabilitation projects identified in the IOAP. Refer to Appendix E for an update on all rehabilitation projects completed during the reporting period and planned for the next reporting period in accordance with CSSA.

M-E-10 System Capacity Assurance Program

FY17 Program

- Continued to collect formula-based defect inspection of significant footage of sewer lines in various sewer-sheds across the county. This information is being used to prioritize cleaning and rehabilitation efforts that will remove inflow and infiltration from the system and create capacity credits. Refer to Appendix E for a progress update.
- Tracked pump station capacities, reviewed drawdown testing results and identified action items pertaining to deficiencies. Critical results of this effort are being documented on each asset within the Hansen system.
- In accordance with the System Capacity Assurance Program (SCAP), reviewed wastewater capacity requests from private development as shown in Table 6.4.
- Continued to work on the procedures for documentation of rehabilitation and the calculation of SCAP results.
- Submitted credit catchment ledgers to the Kentucky Division of Water (KDOW) and EPA as part of quarterly reports.

FY18 Program

- Continue to perform formula-based inspection of sewer lines in various sewer-sheds across the county. Refer to Appendix E for an update on the areas selected for inspection.
- Continue tracking pump station capacities through testing, investigation and capacity evaluations.
- Update WQTC capacities and track new development flows.

- Generate inflow and infiltration reduction projects and calculate related capacity credits.
- Continue to enhance credit calculation protocols and tracking in Hansen.
- Continue to enhance the procedures for documentation of rehabilitation and the calculation of SCAP credits.
- Update SCAP areas based on pump station elimination projects that have been completed.

6.1.1.6. SANITARY SEWER OVERFLOW REPORTING AND NOTIFICATION PROGRAM

This section describes MSD's Sanitary Sewer Overflow (SSO) Reporting and Notification Program. The goal of this section is to maintain accurate, up to date records of SSOs and to ensure proper, timely notification of the agencies and organizations through un-permitted discharge reporting, SSO notification and tracking.

M-F-1 Unauthorized Discharge Reporting

Refer to Section 1: Project WIN Performance Overview for detailed information.

Table 6.4. SCAP Wastewater Capacity Request Review

FY	APPROVED		CONDITIONALLY APPROVED		DENIED	
	REVIEWS	FLOW	REVIEWS	FLOW	REVIEWS	FLOW
FY08	164	2,904,288	123	2,469,192	22	539,824
FY09	46	455,903	132	1,988,973	4	103,000
FY10	77	503,051	135	1,245,410	5	23,214
FY11	113	138,253	115	1,633,364	5	67,600
FY12	98	961,203	141	2,075,781	12	72,822
FY13	100	523,963	182	1,940,150	8	185,100
FY14	139	1,508,296	251	2,521,877	11	80,700
FY15	105	503,940	192	2,002,460	7	47,020
FY16	125	709,164	209	3,237,484	3	13,450
FY17	93	388,626	231	3,741,958	0	0

M-F-2 Sanitary Sewer Overflow Notification

M-F-3 Tracking Sanitary Sewer Overflows

Refer to Section 3: Program Activities for Sewer Overflow Response Protocol for detailed information.

6.1.1.7. FINANCING AND COST ANALYSIS PROGRAM

This section describes MSD's Financing and Cost Analysis Program. The goal of this section is to provide a detailed cost analysis for both the capital and operational costs of MSD for use in future budgeting and decision making. The following cost analysis programs are included in this section: operations, maintenance, capital improvement program funding, management, life cycle, and budget and customer rate setting.

M-G-1 Operations Cost
M-G-2 Maintenance Cost
M-G-3 Capital Improvement Funding
M-G-4 Management Programs Cost
M-G-5 Life Cycle Cost
M-G-6 Budget and Customer Rate Setting

FY17 Program

Details of the FY17 program are included in Table 6.5. Capitalized budget performance is shown in Figure 6.4. Reported amounts for the FY17 program are unaudited financial results.

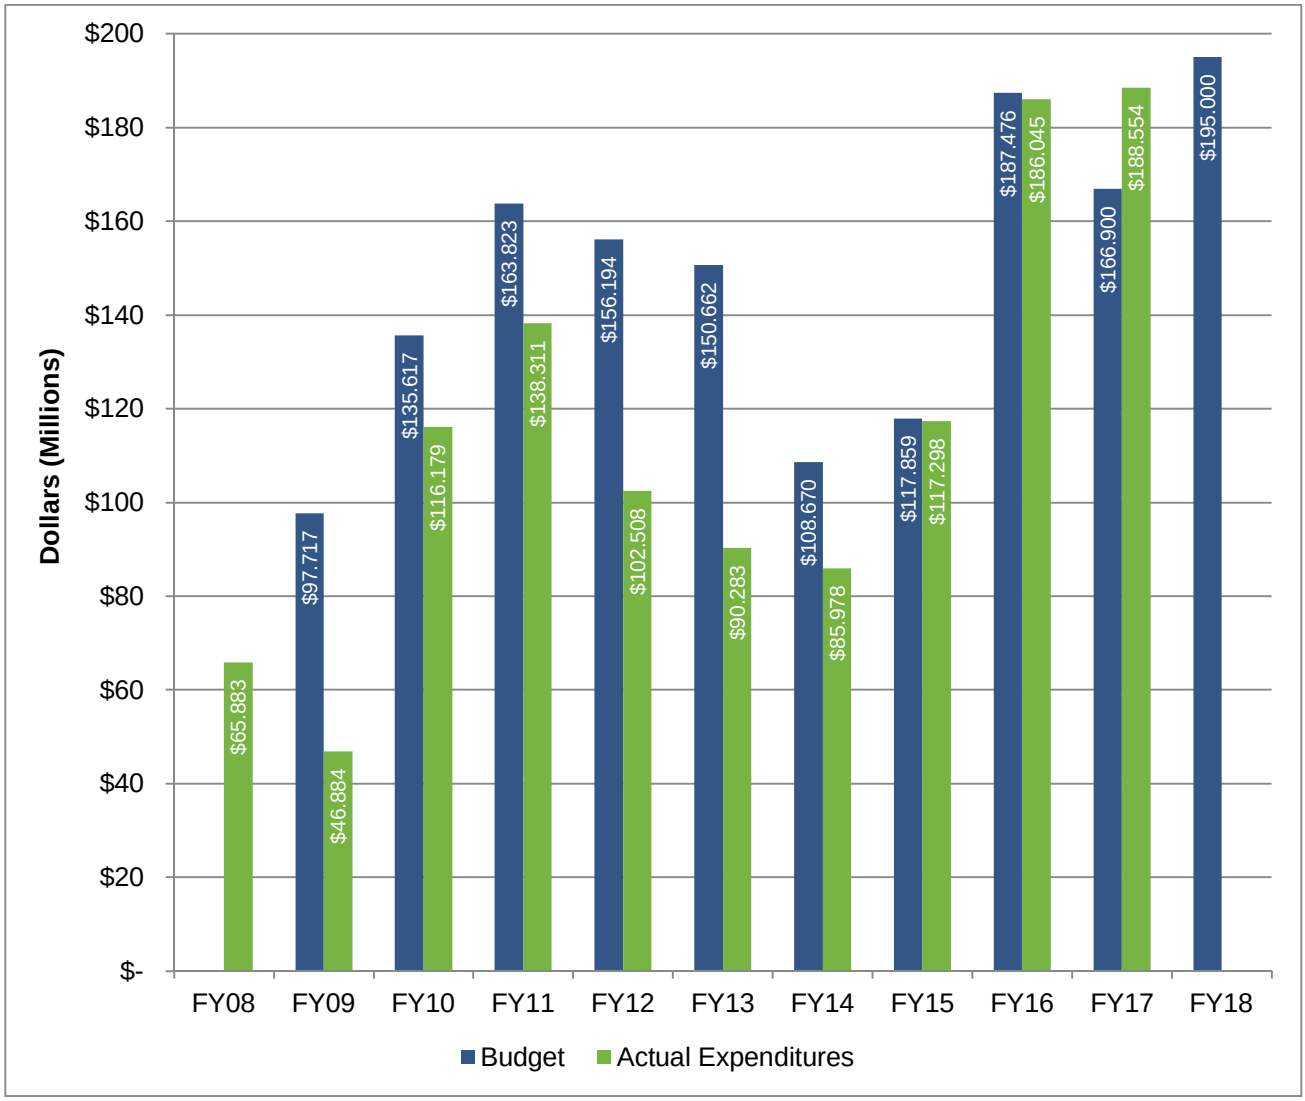
FY18 Program

- Set the operating budget at $125,600,000 and the capital budget at $195,000,000.
- Issue $175 million of revenue bonds in FY18 to fund the capital program.

Table 6.5. FY17 Financing and Cost Analysis Program Details

METRIC	BUDGET	ACTUAL
Operating Revenue Growth	-	6.7%
Operating Revenue	$257,064,000	$259,634,628
Wastewater / Stormwater Revenue	$253,064,000	$253,943,156
Investment Income	$17,508,000	$14,236,455
Debt Service Coverage Ratio	-	181%
Total Operating Expenses	$166,201,511	$169,390,472
Total Capital Expenses	$166,900,000	$188,553,843

Figure 6.4. MSD Capitalized Budget Performance



6.1.1.8. EQUIPMENT AND TOOLS MANAGEMENT AND MAINTENANCE PROGRAM

This section describes MSD's Equipment and Tools Management Programs. The goal of this section is to facilitate efficient repair and support of MSD's sewer systems through an accurate spare parts inventory, a timely equipment maintenance schedule, vehicle repair, and needed tools and supplies.

M-H-1 Spare Parts Inventory Management

M-H-4 Supplies Management

FY17 Program

- Upgraded security at all storeroom locations.

- Developed team goals for concentration of inventory management improvements with spare parts.
- Continued weekly meetings with departments for improved customer service, inventory management of critical spare parts, reorganization of new storeroom locations, and PPE/safety upgrades.
- Provided Excel refresher course training to storeroom team members for improvements with cycle counting and report design.
- Acquired spare parts for Morris Forman WQTC storeroom from ongoing equipment replacement projects.
- Continued asset management process to replace identified spare parts from Morris Forman WQTC flood event.
- Reviewed current SOPs to verify compatibility with current organizational direction. Updated SOPs for quality improvements and determined best practices to improve operations through continuous training of Storeroom applications.
- Completed Phase 1 of bar-code scanning initiatives for inventory control.
- Updated inventory descriptions and relocated like parts in some areas.
- Reviewed contract management of vendor-managed inventory.
- Continued improvements with recycling program.
- Improved cross training of all storeroom team and establish goals to learn new inventory management processes.

FY18 Program

- Resubmit selected Material Master Forms for reprocessing to reconcile vendor's Unit of Measure with storeroom's Unit of Issue, in order to improve inventory and ordering processes.
- Upgrade security of Cedar Creek Storeroom with camera surveillance.
- Revamp Material Master Form to ensure customer comprehension and accuracy.
- Improve receiving process by recording tracking control numbers (TCNs) instead of PO numbers to eliminate ambiguity on materials and shipments.
- Implement plan to reorganize CMF North Warehouse.
- Continue to update SOPs for quality improvements and determine best practices to improve operations, utilizing "Back to Basics" guidelines.
- Complete Bar-Code Scanning initiatives for inventory control.
- Update inventory descriptions and relocate like parts.
- Continue cycle counts after each morning rush and before system processing.
- Implement storeroom follow-up program to ensure accountability of vendors and visibility of incoming assets.

- Continue "Back to Basics" training for goal setting and incorporate focus commodities for team members.

M-H-2 Equipment and Tools Repair Management

FY17 Program

- Completed redesign and remodeling of CMF Tool Shop for added security and availability to crews.
- Attended regular safety inspections and meetings, and supported safety standards as part of participation in CMF and Morris Forman Safety Committees.
- Finalized policy on Arc Flash PPE, in collaboration with Engineering, and began regular inspections of PPE and equipment.
- Trained all employees in advanced safety of material handling and storeroom functionality.
- Continued annual audit of SOPs for tooling inspections and implement improved security measures for cost savings initiatives and asset management.
- Collaborated with Safety to review and update safety equipment and inspection controls (Arc Flash Personal Protective Equipment [PPE], safety harness inspections, eyewash stations, ladders, safety PPE, and fire extinguishers).
- Prepared and executed tooling inspection and equipment repair training for all Treatment and Collections operators, mechanics, electricians and controls technicians.
- Audited tool and equipment repair process and form through MSD Tool Shop for continuous improvement of systems.
- Continued updating standard tooling lists for all Treatment and Collections operators, electricians, mechanics, control specialists, and field supervisors.
- Implemented cost savings initiatives of recycling out-of-service tools and utilizing in-house contracts for equipment and tool repair where applicable.

FY18 Program

- Complete upload of employee tooling lists to eB software for internal management access.
- Continue participation on Central Maintenance Facility and Morris Forman Safety Committees by attending regular safety inspections, safety meetings, and supporting safety standards.
- Designate CMF as ARC Flash and Fall Inspection meeting location.
- Continue training on safety related storeroom processes and inventory for all employees.
- Continue annual audit of SOP for tooling inspections and implement improved security measures for cost savings initiatives and asset management that aligned with departmental goals when necessary.
- Designate supervisors as responsible for managing and responding to employees' inspection needs, including scheduling and filing certificates of inspection if needed.

M-H-3 Vehicle Repair

MSD's vehicle repair maintenance program addresses over 600 pieces of rolling stock, including automobiles, trucks, trailers, construction equipment (backhoes, mobile cranes, etc.) and specialty sewer maintenance equipment. Quarterly and annual summary reports specifically address maintenance issues related to the grouping of Mission Critical Equipment (MCEs) that were identified as being essential to meeting Amended Consent Decree commitments related to NMC and CMOM activities, targeting an overall average availability of 95% or higher for all MCE. Five types of equipment were identified as MCEs in the MSD fleet as shown in Table 6.6 with availability for the current reporting period. It should be noted that the documentation process was changed in FY16 to ensure that out of service times and classifications of repairs are accurate and recorded on a timely basis.

FY17 Program

- Continued monitoring and reporting availability of MCE targeting an overall average availability of 95% or higher for all MCE.
    - Catch Basin Cleaner availability fell below 95% target in FY17 due to the loss of a cleaner to an accident. Prepared specifications for, advertised and awarded contract to purchase one new catch basin cleaner removed from service due to accident damage. Unit has been ordered was delivered in November 2017.
    - High Pressure Sewer Flusher/Jetter Truck availability fell below 95% target in FY16 when the out-of-service time criteria were revised, and equipment was prioritized for replacement in FY17. Prepared specifications for, advertised and awarded contract to purchase one new Single Axle Vacuum Sewer / Catch Basin Cleaner Truck as replacement for two High Pressure Sewer Flusher/Jetter trucks to replace aging equipment and improve availability. Unit has been ordered and was delivered December 2017.
    - Tele-Inspection Vehicle availability fell below 95% target in FY16 when the out-of-service time criteria was revised, and equipment was prioritized for replacement in FY17. Prepared specifications for and advertised two new units to replace aging equipment and improve availability. Contract has been awarded and staff is currently working through configuration issues with manufacturer. Delivery is anticipated within FY18.
- Monitored equipment and work order data using FASTER System reports to analyze and target areas where improvement is needed and to plan future replacements.
- Implemented revised preventive maintenance (PM) schedules to be class-specific and in line with industry standards, specifically addressing the operating environment of all MCE increasing the frequency of PM performed to improve availability to the operating division.
- Analyzed FY18 capital purchasing needs, including the evaluation of MCE for replacement.
- Continued efforts associated with One Water Initiative with LWC to capitalize on fleet services opportunities to realize cost savings while better serving our customers and increasing levels of service to the community. Initiated conversations with both MSD and LWC union leadership regarding shared resources.

Table 6.6. Mission Critical Equipment

EQUIPMENT TYPE	QUANTITY	EVALUATED MISSION CRITICAL AVAILABILITY
Catch Basin Cleaners (mechanical clamshell type)	4	90.0%
High-Pressure Sewer Flusher/Jetter Trucks	6	86.3%
Sound Attenuated Six-Inch Trash Pumps	13	98.8%
Tele-Inspection Vehicles	7	88.5%
Vacuum Sewer / Catch Basin Cleaner Trucks	9	78.9%

FY18 Program

- Continue monitoring and reporting availability of MCE targeting an overall average availability of 95% or higher for all MCE.
  - Catch Basin Cleaner replacement unit was delivered in November 2017 and is anticipated to be put into service in January 2018.
  - High Pressure Sewer Flusher/Jetter Truck replacement unit was delivered December 2017 and will be placed in service in February 2018.
  - Tele-Inspection Vehicle replacement contract has been awarded. Staff is currently working through configuration issues with manufacturer and delivery is anticipated within FY18. Operator and fleet technician training on new units will be conducted after receipt.
  - Vacuum Sewer / Catch Basin Cleaner Truck availability fell below 95% target in FY16 when the out-of-service time criteria were revised, and equipment was prioritized for replacement in FY18. Specifications will be prepare and advertised in FY18 to place in service one new unit to replace aging equipment and improve availability. Operator and fleet technician training on new units will be conducted after receipt.
- Continue monitoring equipment and work order data using FASTER System reports to analyze and target areas where improvement is needed and to plan future replacements.
- Continue to revise PM schedules which are class-specific to address specific needs of MSD based upon the operating environment of equipment to improve overall preventive maintenance program effectiveness.
- Analyze FY19 capital purchasing needs, including the evaluation of all MCE for replacement.
- Continue to explore One Water Initiatives with LWC to capitalize on fleet services opportunities to realize cost savings while better serving our customers and increasing levels of service to the community.

6.1.1.9. CUSTOMER SERVICE PROGRAMS

This section describes MSD's Customer Service Programs. The goal of this section is to strengthen and maintain a healthy relationship between MSD and the public through service programs which include complaint management, public information and public education.

M-I-1 Customer Service
M-I-2 Public Information
M-I-3 Public Education

FY17 Program

- Mailed out 2,076 Project WIN and Plumbing Modification Program packets of information or applications.
- Received 58,653 calls during FY17 as shown in Table 6.7. Figure 6.5 includes calls answered by MSD on behalf of Louisville Metro through FY14.
- Continued effort to reduce the percentage of abandoned calls below target level as shown in Figure 6.6. Annual rate continues to trend upward began taking calls for the Louisville Water Company in July 2016; however this practice ceased in December 2016 and since that time, quarterly abandonment rates have reduced below target level despite challenges in staffing and programmatic changes.

FY18 Program

- Continue efforts to keep the number of abandoned calls below target level.
- Fill vacant Customer Relations positions in order to better serve customer needs.

Figure 6.5. Total Calls Received

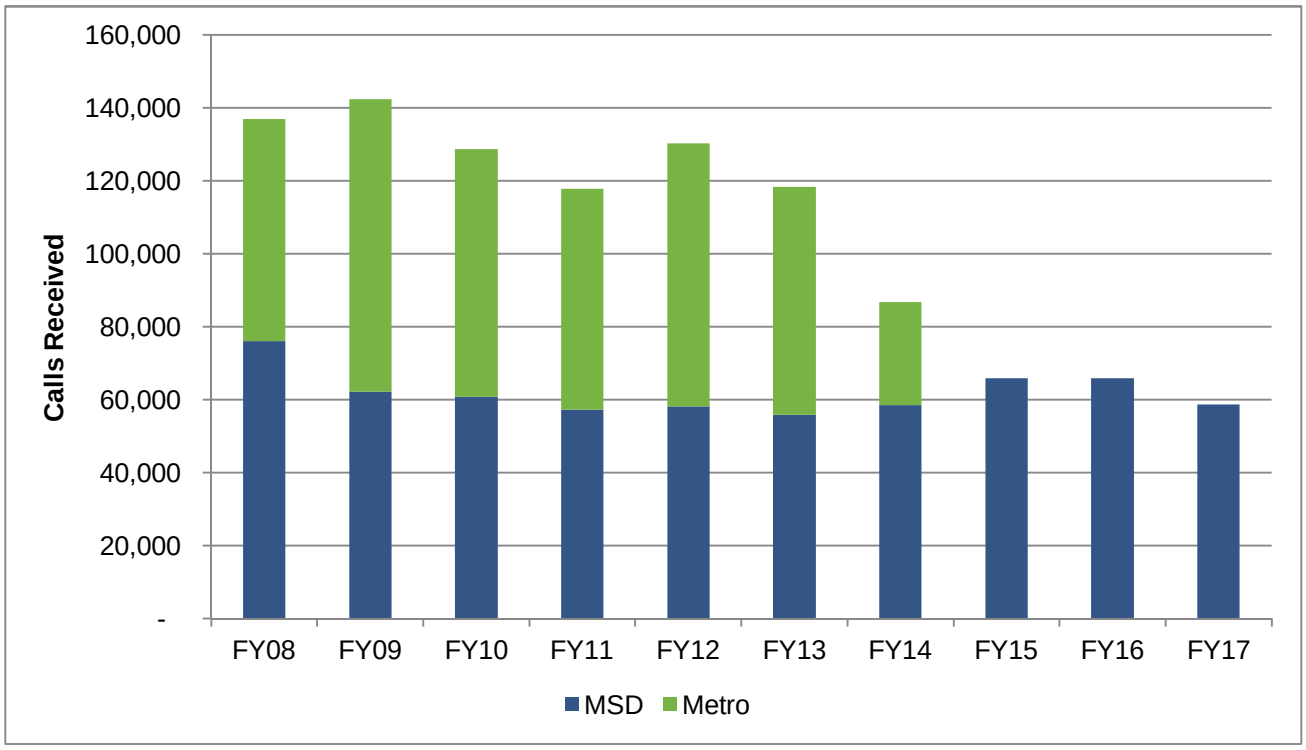


Table 6.7. FY17 Customer Service Call Data

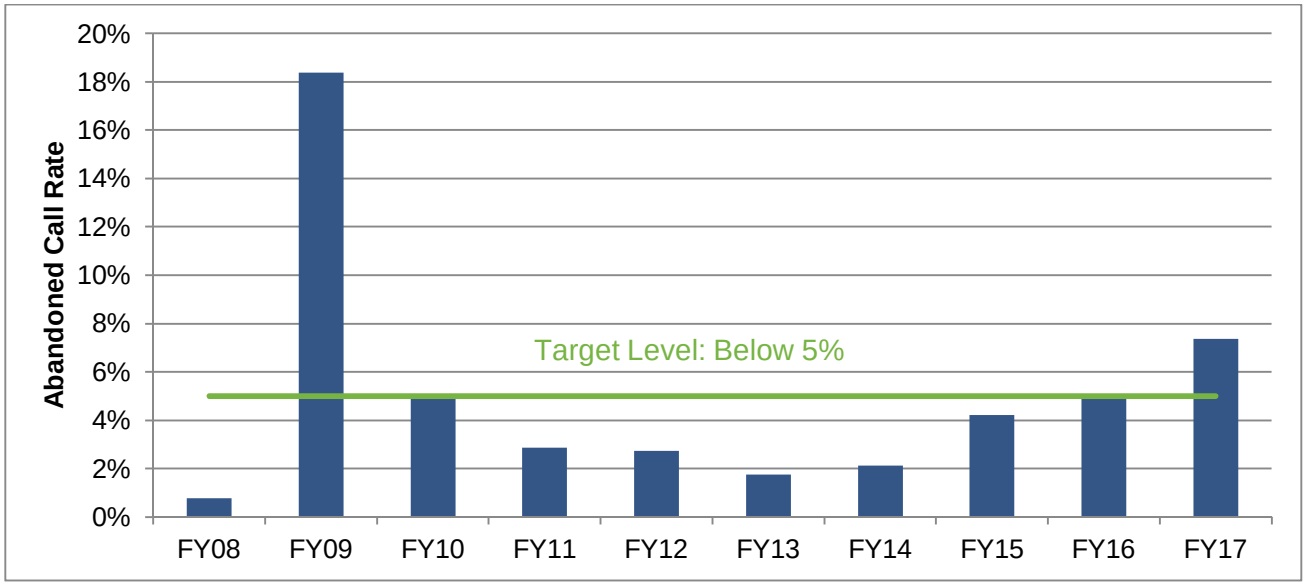
MONTH	MSD CALLS RECEIVED	MSD CALLS ABANDONED	AVG. HOLD TIME (SEC)	CUSTOMER CARE CALLS RECEIVED
July	7,256	651	80	811
August	5,194	219	66	953
September	5,834	310	64	761
October	5,348	211	63	826
November	4,955	156	53	702
December	4,858	289	54	1,189
January	4,073	150	50	718
February	4,779	184	57	557
March	6,838	356	59	866
April	5,471	243	58	937
May	5,545	220	65	769
June	5,830	264	63	867

Figure 6.6. Abandoned Call Rate



6.1.1.10. LEGAL SUPPORT PROGRAMS

The following support programs are included in this section: inter-jurisdictional agreement, ordinances, pretreatment legal support, grease control legal support, service laterals legal support, septic tank haulers legal support, and “Call Before You Dig” legal support.

M-J-1 Inter-Jurisdictional Agreement
M-J-2 Ordinances

FY17 Program

Over the past fiscal year, the MSD legal department has provided a variety of legal services designed to support MSD in its efforts to implement programs to abate sanitary sewer overflows as required by the Amended Consent Decree. The services most directly related to this effort include:

- Participated in and/or provided legal advice and other functions pertaining to the procurement of construction and professional service contractors to provide services and/or perform work in furtherance of IOAP related projects.
- Participated in the acquisition of properties and/or property interests (easements and/or fee simple ownership) critical to the completion of IOAP related sewer construction projects. The department's participation has included assisting in the negotiation and structuring of purchase and sale agreements, drafting acquisition related documents, title research, and performing or providing oversight of the closing of acquisition transactions, as well as initiating legal proceedings to acquire property through eminent domain.
- Provided support, assistance and counsel to regulatory programs and enforcement actions brought under the Wastewater Stormwater Discharge Regulations, Hazardous Materials Ordinance, and Erosion Prevention and Sediment Control Ordinance.
- Pursued cost recovery actions for regulatory violations.

FY18 Program

Continue to provide legal services to support MSD.

M-J-3 Pretreatment

Refer to Sections 2.4 and 6.1.2.2 for details related to pretreatment.

M-J-4 Grease Control

Refer to Section 6.1.2.4 for details related to grease control.

M-J-5 Service Laterals

Refer to Section 6.1.2.5 for details about service connections.

M-J-6 Septic Tank Haulers Legal Support

Refer to Section 6.1.2.7 for details related to septic tanks.

M-J-7 “Call Before You Dig”

Refer to Section 6.1.2.8 for details related to the Call Before You Dig program.

6.1.1.11. WATER QUALITY MONITORING PROGRAMS

This section describes MSD's Water Quality Monitoring Program. The goal of this section is to maintain an accurate, consistent record of water quality in receiving bodies of water. Monitoring results are used to determine the effect of effluent discharge and/or spills through the following monitoring programs: routine water quality, investigative water quality, and water quality monitoring for spill impact. Water Quality monitoring data is also assessed and provided in the Water Quality Synthesis Report.

M-K-1 Routine Water Quality Monitoring Programs

M-K-2 Investigative Water Quality Monitoring

M-K-3 Water Quality Monitoring for Spill Impact

MSD has aggressively pursued a watershed management approach that relies heavily on an established water quality monitoring program. The program has an extensive in-stream monitoring effort for tributary streams and for emergency spill responses, including:

- Ambient monitoring includes a grid of monitoring sites across Jefferson County to monitor multiple physical and biological indicator parameters.
- Recreation contact monitoring is conducted seasonally at each of the ambient monitoring sites for parameters such as fecal coliform.
- The United States Geological Survey (USGS) collects continuous flow data at each of the ambient monitoring sites.
- Sanitary Sewer Overflows (SSOs) / Combined Sewer Overflows (CSOs)/ Significant Industrial Users (SIUs) point sampling monitors the risk of water quality impairment to discharges associated with SIUs and General Discharger Permits, and those that are associated with emergency responses.
- CSO flow monitoring measures flow within the combined sewer system to provide improved data input into water quality models.

Additional information on these programs is provided in Section 4.5.

6.1.1.12. CONTINGENCY PLAN FOR SEWER AND TREATMENT PLANT

This section describes MSD's Contingency Plan for the wastewater collection and treatment system. The goal of this section is to provide a protocol for emergency response and notification. The following elements are included in this section: contingency planning process, response flow diagram, public notification plan, agency notification plan, emergency flow control plan, emergency operations and maintenance plan, preparedness training program, water quality monitoring plan, and Sewer Overflow Response Protocol (SORP). The SORP requires training for all MSD employees.

M-L-1 Contingency Planning Process

M-L-2 Response Flow Diagram

FY17 Program

- Continued collaboration with the National Weather Service, USGS, and Louisville Metro Emergency Management Agency (EMA) to develop a pilot project to install flow and level monitors at a site for

early warning of significant weather events. Significant changes in both meters would trigger a notification at MSD and EMA.

- Continued efforts to improve disaster response protocols. Improved draft matrix for internal training modules to be implemented, including training on first aid, CPR, bloodborne pathogens, and the National Incident Management System's Incident Management System and National Response Framework.
- Practiced annual Floodwall Closure Installations.
- Completed first phase of development of IT Disaster Recovery Plan, which primarily focused on enhancement of disaster recovery infrastructure.
- Revised the Comprehensive Nature Disaster and Business Continuity Plan, including development of several key documents and organizational structure of the comprehensive plan. Identified the critical paths for the development of the key elements for the completion of the plan.
- Completed first phase of new comprehensive ERP, as part of MSD Business Strategy No. 5. This included the initial vulnerability assessment and existing document review.

FY18 Program

- Continue work with the National Weather Service regarding monitors for early warning of significant weather events.
- Continue revision of Comprehensive Nature Disaster and Business Continuity Plan using the critical path. A disaster planning consultant will be utilized to aid in the completion of the plan, which is currently on schedule for June 2018. This revision will include training and emergency exercises.
- Continue to work with other agencies to develop Catastrophic Urban Flood Plan.
- Continue to practice annual Floodwall Closure Installations.
- Continue development of IT Disaster Recovery Plan.
- Begin second phase of development and revision of comprehensive ERP, as a part of MSD Business Strategy No. 5. The ERP is on schedule for completion in May 2018 and will be updated as necessary.

M-L-3 Public Notification Plan

M-L-4 Agency Notification Plan

FY17 Program

Continued quarterly and annual training as outlined in Section 3: Program Activities for Sewer Overflow Response Protocol.

FY18 Program

Continue quarterly and annual training as outlined in Section 3: Program Activities for Sewer Overflow Response Protocol.

M-L-5 Emergency Flow Control Plan
M-L-6 Emergency Operations and Maintenance Plan

FY17 Program

Strategy 5 of MSD's Strategic Business Plan requires that MSD "develop a comprehensive disaster response and business continuity plan for disasters that impact our ability to serve our customers and the community". As part of this effort, a diverse team from across MSD has been working to complete the following initiatives of this plan:

- Assessed level of asset protection through independent consultant evaluation of insurance and risk management plans.
- Completed preliminary vulnerability assessment of MSD operations and infrastructure assets, using industry best practices.
- Selected qualified consultant to assist in completion of Comprehensive Disaster Response and Business Continuity Plan.
- Finalized elements and metrics of EUM related to Operational Resiliency.
- Integrated Engineering's recommendations on systems and improvements necessary to mitigate risks into 20-Year Comprehensive Facility Plan document and capital budget.

FY18 Program

- Continue development of catastrophic urban flood plan in conjunction with the Department of Homeland Security, US Army Corps of Engineers, Kentucky Emergency Management, Louisville Emergency Management Agency and other partners.
- Finalize comprehensive risk and vulnerability assessment of MSD operations and infrastructure assets, using industry best practices.
- Develop and expand each element of EUM related to Operational Resiliency.

M-L-7 Preparedness Training

FY17 Program

Conducted training for Emergency Response procedures as per Section 6.1.1.2.

FY18 Program

Continue to conduct training for Emergency Response procedures as per Section 6.1.1.2.

M-L-8 Water Quality Monitoring Plan

Refer to Sections 4.5 and 6.1.1.11 for more details on the MSD Water Quality Monitoring Plan.

M-L-9 Sewer Overflow Response Protocol

Refer to Section 3: Program Activities for Sewer Overflow Response Protocol for more details on the SORP.

6.1.2 OPERATIONS PROGRAMS

6.1.2.1. PUMP STATION OPERATIONS PROGRAMS

This section describes MSD's Pump Station Operation Programs. The goal of this section is to maintain pump stations for optimal use during routine and emergency operations through well documented operating procedures.

O-A-1 Routine Operating Programs

FY17 Program

- Continued review and updates, as needed, of the U.S. Army Corps of Engineers (USACE) Flood Operations and Maintenance Manual based on USACE and staff review comments. The manual is continuously under review as MSD completes both LTCP and NMC programmatic activities.
- Determined capital project priorities and the budgetary needs related to flood protection system pump stations during regular meetings with MSD Operations and Engineering staff.
- Continued to develop operations and maintenance (O&M) manuals for existing sanitary pump stations that do not have formal O&M manuals. New O&M manuals were created for 30 sanitary pump stations as listed in Table 6.8.
- Continued to develop an application to automate the drawdown testing application at sanitary pump stations and to develop trending standards using Telog. Installed level instrument at 19 sanitary pump stations in order to support automated drawdown efforts as listed in Table 6.8. Completed over 90 manual drawdowns at sanitary pump stations.
- Provided permanent backup power at 86 critical pump stations based upon the previously performed prioritization.

FY18 Program

- Continue regular meetings with MSD Operations and Engineering staff to determine capital project priorities and advise on the budgetary needs on a quarterly basis.
- Complete Operations staff training for Southwestern Pump Station due to operational changes and new equipment related to Bells Lane Wet Weather Treatment Facility construction and planned operation. Complete Operations staff training for pump stations and diversion structures at newly-constructed CSO storage basins.
- Continue the planning to enhance O&M manuals for existing sanitary pump stations that do not have formal O&M manuals. Staff will prioritize pump stations based on operational history. New O&M Manuals will be assigned for 20 sanitary pump stations as detailed in Table 6.9.
- Implement 1-minute level and asset configuration data import to support automatic pump station draw down testing and performance trending. Install an additional 22 level transducers at sanitary pump stations. Continue reviewing pump stations for the installation of level sensors in support of automated drawdown trending.
- Continue to provide backup power at critical pump stations.

O-A-2 Emergency Operating Programs

FY17 Program

- 4th Street Flood Pump Station Improvements – Replacing three (3) Flood Pumps, three (3) Sanitary Pumps, and Motor Control Centers (MCC); installing a Programmable Logic Control (PLC); and raising the overflow dam approximately 6 inches. Sanitary work will help increase capacity in the collection system and decrease the number of overflows at CSO022, and flood pumping work will increase reliability and performance during flooding events. Project expected to be completed in FY18.
- Green Line Analysis – Continued to evaluate pump stations for inclusion in the Green Line program. Used results of previous Green Line studies to set new elevation set points at 17 pump stations.
- South Pope Lick Pump Station Project (Budget ID H16356) – Bid and award of construction associated with repair of the South Pope Lick Pump Station after a surge event damaged both the

east valve vault and the corresponding piping. The project was advertised July 7, 2016, and a notice-to-proceed was issued October 24, 2016. Construction of this project is scheduled for completion on November 30, 2017.

- Southwestern Gate Chamber Sluice Gate Replacement Project – Initiated emergency project in FY17, expected to be completed in FY18. This project is for the replacement of all three gates and actuator on the Southwestern Outfall, downstream of the Southwestern Pump Station. These gates are responsible for holding back wet weather flow to maximize capacity in the collection system.

FY18 Program

- 34th Street Pump Station Valve Project – Study removal of valves and piping that currently allows for sanitary pumps to pump directly into the Ohio River.
- 4th Street Pump Station Valve Project – Study removal of valves and piping that currently allows for sanitary pumps to pump directly into the Ohio River.
- Beargrass Creek Flood Pump Station Electrical Improvements – Replace and upgrade all electrical & mechanical control equipment, add automated grease systems, and install new PLCs in order to increase the stations reliability and performances during an Ohio River flood event.
- Green Line Analysis - Continue to evaluate pump stations for inclusion in the Green Line program. Green Line pump stations will be prioritized under the program to complete new draw down tests and pump station site assessments. The data from this effort will be collected and will be used to plan future rehabilitation projects. Future rehabilitation work will also correct any pump station operation level settings to prevent line surcharging. An abbreviated Green Line Study for MSD1203-PS Kirby Lane and MSD0038-PS Woodland Hills was initiated in FY15, but was put on hold until more accurate hydraulic models could be put in place. MSD expects the completion of the study in FY18.

6.1.2.2. PRETREATMENT PROGRAM

This section describes MSD's Pretreatment Programs. The goal of this section is to protect MSD's sewer system and treatment plants by requiring industrial users to pretreat their effluent to required levels through industrial user permitting, inspection, sampling and enforcement.

O-B-1 Industrial User Permit

O-B-2 Inspection

O-B-3 Sampling Enforcement

Administered pretreatment limitations at Hite Creek, Floyds Fork, Derek R. Guthrie and Morris Forman WQTCs. Additional information related to the MSD Pretreatment Program for the combined sewer system can be found in Section 2.4. Jeffersontown WQTC was eliminated and flow was redirected to the Morris Forman and Cedar Creek WQTCs in December 2015.

FY17 Program

- Submitted local limits for WQTCs to KDOW for review.
- Reported the status of the Pretreatment Program in annual and semi-annual reports to KDOW.

- Developed a hospital assessment document which identifies reductions in pollutants discharged by hospitals to the publicly-owned treatment works (POTW) as a result of source reduction through process modifications, equipment replacement, products substitution and improved waste management procedures.
- Developed an industrial user email list which is used to regularly email information to industries regarding compliance, regulatory updates and other items of interests to industries.
- Evaluated the Effluent Limitations Guidelines and Standards for Dental Category (Final Rule June 14, 2017) to establish regulatory timelines for implementation of requirements for existing dental offices (July 14, 2020) and to assess the best opportunities to communicate requirements to dental clinics.

FY18 Program

- Establish communication with dental offices and distribute regulatory information regarding the Effluent Limitations and Guidelines and Standards for the Dental Category. Develop a one-time Compliance Report which must be submitted by dental offices.
- Require Environmental Compliance Inspectors to obtain photographs and more detailed information regarding all sampling locations and flow meters.
- Identify sources of molybdenum in Morris Forman's influent and pursue opportunities to reduce molybdenum through product substitution or other controls.
- Establish better data collecting methods and reporting methods to reduce the effort required to submit semi-annual and annual pretreatment reports.
- Work with the KDOW in order to discuss delays in the approval of local limits. MSD will develop a plan to resolve all local limits-related issues and prioritize the development of local limits for Cedar Creek WQTC.

6.1.2.3. CORROSION CONTROLS PROGRAM

This section describes MSD's Corrosion Controls Program. The goal of this section is to extend the life of MSD's sewer system by controlling the corrosive effects of hydrogen sulfide (H_2S) and other corrosive chemicals in the system through inspection, control measures, monitoring, and performance measures.

O-C-1 Inspection

O-C-2 Control Measures

O-C-3 Monitoring

O-C-4 Performance Measures

Hydrogen sulfide is a serious problem for the structural integrity of the collection system, as well as a nuisance to the public due to odor. In some instances, it is possible to respond to odor complaints and treat H_2S without addressing corrosion concerns.

FY17 Program

- Continued to clean MSD facilities to minimize impact of corrosion and odors. Completed 358 cleaning work orders on collection system.
- Continued to enhance asset review and documentation by further defining service request responsibilities related to odor complaints.
- Initiated contracts in order to provide professional engineering services to assist MSD with odor control for the collection system, regional WQTCs, and Ohio River Force Main (ORFM). Work included:
    - Design of Hite Creek Preliminary Treatment Facilities (PTF) Odor Control Improvements Project, which also included Design Services During Construction (DSDC) for the Project.
    - Testing and consultation services for the ORFM Odor and Corrosion Control Project, including pilot testing of a bio-filter to treat H_2S at an air release valve (ARV) along the ORFM at the site of the proposed Waterfront Botanical Gardens site.
    - Other miscellaneous projects as determined by the MSD Collections System Manager and Regional WQTC Program Manager.
- Conducted pilot test of sodium chlorite to treat odors and H_2S with negative results due to impacts on plant processes and cost and safety concerns.
- Continued to monitor and evaluate gravity lines within the collections system through the CSSA/Blockage Abatement Program. Drafted corrosion and FOG indexes for use in internal CSSA Remediation Recommendation Export Tool.

FY18 Program

- Continue to clean MSD facilities to minimize impact of odors and corrosion caused by H_2S on the collection system.
- Create further training and documentation on maintenance activities and work flow for better tracking of work performed and time and materials used.
- Conduct pilot test of an aeration odor control treatment at a pump station wet well. The product is designed for the oxidation and removal of FOG, matting, and odor in pump stations and wet wells.
- Continue to investigate the ORFM to determine recommended plan to reduce odors and corrosion caused by H_2S.
- Monitor and evaluate gravity lines within the collections system through the CSSA/Blockage Abatement Program. Implement corrosion and FOG indexes and assign remediation recommendation in the internal CSSA Remediation Recommendation Export Tool.
- Continue to contract professional engineering services to assist MSD with odor control for the collection system, regional WQTCs, and ORFM.
- Initiate review of underground tank pump station sites, which may be susceptible to corrosion.

6.1.2.4. GREASE TRAP INSPECTION AND ENFORCEMENT PROGRAM

This section describes MSD's Grease Trap Inspection and Enforcement Programs. The goal of this section is to reduce the amount of fats, oils and grease (FOG) that enter MSD's sewer system and treatment plants through permitting, inspection, enforcement, performance measures, and the FOG program.

O-D-1 Permitting

O-D-2 Inspection

O-D-3 Enforcement

O-D-4 Performance Measures

O-D-5 Fats, Oils and Grease Program

FY17 Program

- Conducted 60 inspections at Food Service Establishments (FSEs) within Jefferson County. Inspections resulted in immediate issuance of appropriate enforcement actions to include Field Correction Notices (FCNs). FCNs were issued for violation of MSDs Wastewater/Stormwater Discharge Regulations and FOG Policies.
- Issued 88 enforcement actions to include FCNs, NOVs and NOVs with Fines to FSEs requiring action(s) to prevent and/or eliminate grease blockages in MSDs Collections System. The enforcement actions required FSEs to install and/or modify grease control equipment, with additional requirements to submit documentation of installations and/or modifications.
- Conducted 316 Plan Review inspections to insure proper grease control equipment was installed at new and/or modified FSEs.
- Mailed 362 FOG residential public service notifications. The public service outreach informed residents of a recent sanitary sewer blockage occurrence near their home. Information sent to residents informs the customer of measures that could be taken within a residential dwelling to prevent any further occurrences.
- Conducted two (2) Certified Grease Waste Hauler (CGWH) training classes for haulers servicing grease control equipment within Jefferson County. Class numbers 16 (September 13, 2016) and 17 (April 25, 2017) were provided to haulers during this period. CGWHs as well as master and journeyman plumbers that service or repair grease traps or grease interceptors within Jefferson County are required to participate and receive approval to service grease control equipment. FSEs in Jefferson County must only utilize MSD's CGWHs or plumbers that have obtained the appropriate certification.
- Performed 21 CGWH audits for haulers participating in the CGWH Program. Audits are conducted to assure Certified Grease Waste Haulers comply with hauler agreements between MSD and CGWH. MSD conducts audits with unspecified CGWHs randomly during the fiscal year.
- Continued to track FOG removal by CGWHs. Collectively, 3,310,259 gallons of FOG was removed from grease control equipment maintained by area FSEs during the reporting period. Collectively, CGWHs in Jefferson County serviced approximately 5,970 items of grease control equipment.

- Conducted five (5) FOG reconnaissance tele-inspection projects in conjunction with MSD's internal tele-inspection crews at various locations. The locations inspected were areas where FSEs have not properly maintained grease control equipment or where multiple FOG related incidents had occurred.
- Continued to track FOG Program performance measures.

FY18 Program

- Continue to conduct inspections at FESs and issue enforcement actions as appropriate for violations of the MSD Wastewater/Stormwater Discharge Regulations.
- Continue to send FOG residential public outreach letters to residents in neighborhoods in the MSD service area that had FOG issues.
- Participate in public education and outreach programs to inform the public regarding MSD's FOG Program.
- Continue to host at least two (2) CGWH training classes.
- Continue to conduct CGWH audits.
- Continue to track FOG Program performance measures and develop reporting tools.

6.1.2.5. NEW CONNECTION TAP-IN PROGRAM

This section describes MSD's New Connection Tap-In Program. The goal of this section is to ensure that future connections do not compromise the capacity of the receiving treatment plant. The program is implemented using a new service tap approval process, inspection, enforcement, and performance measures for new connections to existing sewers and increased flow on existing service connection locations. All new service connections are installed by contractors that have a master plumber on staff. New connections made to public sanitary sewers are inspected by MSD personnel.

All new and changes to wastewater discharge volumes are reviewed through MSD's System Capacity Assurance Program (SCAP). Developers are required to submit proposed flows to MSD's system and those flows are traced through MSD's infrastructure to identify lack of system capacity. Where capacity in the system exists, capacity requests are approved for 90 days. Where capacity does not exist, upgrades to infrastructure are undertaken or the capacity request is not approved.

O-E-1 Installation of New Service Taps

O-E-2 Inspection

O-E-3 Enforcement

O-E-4 Performance Measures

O-E-5 Other

FY17 Program

- Approved plans for 297 new development projects to connect to MSD's wastewater system. Treatment capacity is reviewed prior to approval of any plans based on the approved SCAP.
- Inspected installation of 104 new property service connections (PSCs) on existing MSD's sewers.

FY18 Program

- Continue to review projects for capacity available through SCAP program.
- Consolidate and improve internal tracker for new property services connections within the existing infrastructure.
- Work with Customer Relations, Development, and Engineering to develop SOP for new property service connections on existing infrastructure.

6.1.2.6. FLOW MONITORING FIELD OPERATION PROGRAMS

This section describes MSD's Flow Monitoring Field Operation Programs. The goal of this section is to provide accurate flow data for use in evaluating various aspects of MSD's sewer system. Flow is monitored at both permanent and temporary stations.

O-F-1 Permanent Stations
O-F-2 Temporary Stations

Refer to Section 4.5 for details on water quality monitoring efforts.

6.1.2.7. SEPTIC TANK HAULERS PROGRAM

MSD does not accept septic tank waste. This is handled through private contractors in Jefferson County.

6.1.2.8. "CALL BEFORE YOU DIG" PROGRAM

This section describes MSD's "Call Before You Dig" Program. The goal of this section is to prevent the damaging or cutting of sewer lines and other MSD assets and subsequent spills through permitting, inspection, enforcement, and performance measures.

O-H-1 Permitting
O-H-2 Inspection
O-H-4 Performance Measures

FY17 Program

- Contracted with locating company to locate all requests with the MSD service area. Contract is set up to handle Louisville Water Company (LWC) requests as well (invoiced separately). Invoices totaled $967,407.37 to process 114,235 locate requests to identify MSD facilities during the reporting period.
- Contracted with the KY 811 (BUD Center) for underground utility information call center services. Invoices totaled $186,732.80 to participate in this program for the reporting period.
- Requested 2,700 (859 via web and 1,841 via phone) to the BUD Center for the marking of other utilities during this time period.

FY18 Program

- Continue to contract for utility locating service.

O-H-3 Enforcement

Enforcement is handled by the Commonwealth of Kentucky.

6.1.3 MAINTENANCE PROGRAMS

6.1.3.1. PUMP STATION PREVENTIVE MAINTENANCE

This section describes MSD's Pump Station Preventive Maintenance program. The goal of this section is to prevent unanticipated repairs and subsequent down-time by providing scheduling, staff, and records to perform routine, preventive pump station maintenance. Electrical, mechanical, and physical maintenance are included in this section.

S-A-1 Electrical Maintenance

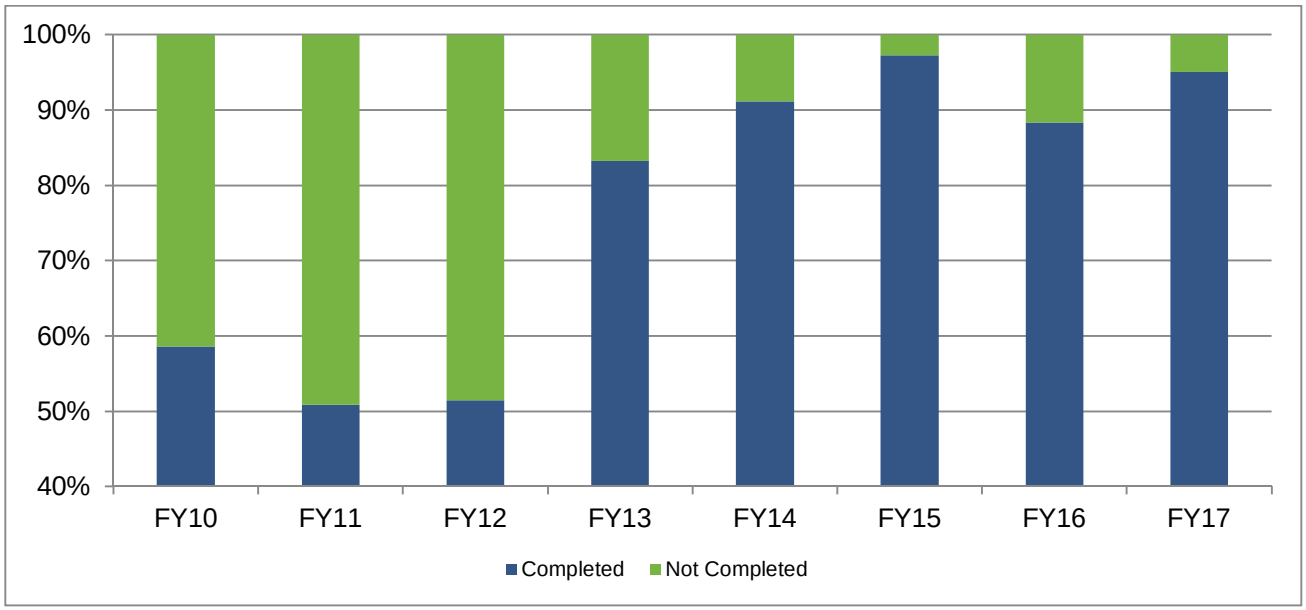
S-A-2 Mechanical Maintenance

S-A-3 Physical Maintenance

FY17 Program

- Continued preventive maintenance inspections for sanitary and flood pump stations as shown in Figure 6.7.
- Continued to annually train staff to use the Hansen asset management system to track pump station work orders as well as associated pump station assets.
- Worked with Engineering on the design and construction of pump stations at CSO storage basins and diversion structures.

Figure 6.7. Sanitary Pump Station Preventive Maintenance



FY18 Program

- Continue preventive maintenance inspections for sanitary and flood pump stations. Continue to annually train staff to use the Hansen asset management system to track pump station work orders as well as associated pump station assets.
- Continue collaboration between Operations and Engineering staff, designers and contractors to incorporate changes to the system with the elimination of the non-regional WQTCs and the addition of storage basins and associated pump stations as required by the IOAP.
- Continue to develop and improve SOPs training, and reporting related to subsequent repairs.

6.1.3.2. FORCE MAIN PREVENTIVE MAINTENANCE

This section describes MSD's Force Main Preventive Maintenance program. The goal of this section is to prevent unanticipated repairs and subsequent down-time by providing scheduling, staff, and records to perform routine, preventive force main maintenance. The maintenance programs include walking the force main alignment to find cave-ins and air relief valve inspections.

S-B-1 Air Release Valves

S-B-2 Valve Exercise Program

FY17 Program

- Conducted the Annual Force Main Program evaluation and completed inspections on force mains listed in Table 6.10, covering 198,237 LF. Each inspection consisted of inspecting wet wells, valve vaults, air release valves, and discharge manholes; pumping out access vaults to lube, grease and exercise cross-connections; and observing the ground above the lines for evidence of pipe failure below ground.
- Determined that 13 air release valves required repairs or replacement as a result of inspections. Continued to initiate corrective work orders for defects found on other assets during inspections.

Table 6.10. FY17 Force Main Inspections

FORCE MAIN	FORCE MAIN	FORCE MAIN	FORCE MAIN
BARDSTOWN BLUFF – 6,597'	GARDEN TRACE – 637'	NEW MARKET – 2,986'	RUBBERTOWN – 9,609'
BOLLING BROOK – 1,246'	GRAND AVE. – 28,832'	OHIO RIVER – 95,009'	SAUREL – 1,306'
CAMPBELL STREET – 1,298'	HURSTBOURNE – 3,735'	PARK PLACE – 1,543'	SHELBYVILLE ROAD – 3,721'
CEDAR BROOK – 764'	JOHNSON ROAD – 4,004'	PHOENIX HILL – 435'	SLUGGER FIELD – 324'
CLORE LANE – 800'	KAVANAUGH CENTER – 1,136'	POPLAR HILL – 851'	ST MATTHEWS #7 – 283'
CLYDE MOORE – 685'	KAVANAUGH ROAD – 2,461'	POPLAR HILL COURT – 950'	TITLEIST – 779'
CYPRESS SPRINGS – 6,723'	KILCOTT – 466'	PREAKNESS – 368'	WEST COUNTY SLUDGE MAIN – 74,693'
FLOYDSBURG ROAD – 1,183'	MARCEITTA WAY – 810'	RIDGELEIGH – 616'	
FONTAINE ESTATES – 264'	MIDDLETOWN CHRISTIAN VILLAGE – 901'	RIVER ROAD – 425'	

FY18 Program

- Complete the annual force main evaluation by December 31, 2017. Adjustments to the inspection schedule will be made based on conditions observed during the inspection cycle.
- Review 5-year trends in activities and performance metrics, comparing to targets established in 2006.
- Schedule FY18 force mains for inspection.

6.1.3.3. GRAVITY LINE PREVENTIVE MAINTENANCE

This section describes MSD's Gravity Line Preventive Maintenance program. The goal of this section is to reduce infiltration and increase efficiency of the gravity line system through routine cleaning, root control, and manhole preventive maintenance.

S-C-1 Routine Hydraulic Cleaning

S-C-2 Routine Mechanical Cleaning

S-C-3 Root Control Program

S-C-4 Manhole Preventive Maintenance

Refer to Appendix E for more details on the Gravity Line Preventative Maintenance Program.

6.1.3.4. EQUIPMENT AND COLLECTIONS SYSTEM MAINTENANCE

S-D-1 Equipment Maintenance

Equipment and vehicle maintenance is discussed in detail in Section 6.1.1.8.

6.2. COMPREHENSIVE PERFORMANCE EVALUATIONS AND COMPOSITE CORRECTION PLANS

Per requirements of MSD's 2009 Amended Consent Decree, MSD implemented a Comprehensive Performance Evaluation (CPE) and Composite Correction Plan (CCP) program for MSD's Water Quality Treatment Centers (WQTCs). This program defined specific WQTC improvements to be completed by December 31, 2011. These improvements under this program are discussed under Section 6.2.1. Although the IOAP CPE/CCP improvements were completed by December 31, 2011, MSD will continue to implement CPE/CCP activities as part of the MSD's CMOM Program. Section 6.2.2 will list such activities per WQTC as they occur each reporting period and a comprehensive project schedule for CPE/CCP related capital projects is provided in Section 6.3.

6.2.1 AMENDED CONSENT DECREE CPE/CCP PROGRAM

All activities under this program were completed by December 31, 2011, as required per the IOAP.

6.2.2 CMOM CPE/CCP PROGRAM

This section describes CMOM CPE/CCP activities active during the reporting period and being planned for the next fiscal year. Schedules for CPE/CCP related capital projects are provided in Section 6.3.

6.2.2.1. CEDAR CREEK WATER QUALITY TREATMENT CENTER

FY17 Program

- Completed design of the Influent Pump Station Motor Controls Upgrade project.
- Initiated and completed construction of the Influent Pump Station Gate Repair and UV Gate Replacement project, part of the recommendations of a study performed in 2014.

FY18 Program

- Advertise and award construction contract for the Influent Pump Station Motor Controls Upgrade project in FY18.

6.2.2.2. HITE CREEK WATER QUALITY TREATMENT CENTER

FY17 Program

- Completed construction of the Hydraulic Improvements project, increasing plant capacity from 4 to 6 MGD.
- Continued design of the expansion project to increase the average daily treatment capacity from 6 MGD to 9 MGD.

FY18 Program

- Advertise and award the construction contract for the expansion project in early 2018.

6.2.2.3. FLOYDS FORK WATER QUALITY TREATMENT CENTER

No major capital projects planned for the Floyds Fork WQTC in FY17 or FY18.

6.2.2.4. DEREK R. GUTHRIE WATER QUALITY TREATMENT CENTER

FY17 Program

- Discussed and developed a plan with KDOW to rerate the facility from 30 MGD to 60 MGD to account for the increase in service area during wet weather conditions. The plan includes coordinated submittals of the Derek R. Guthrie WQTC Facility Plan, an updated KPDES permit application for the WQTC, and Return Activated Sludge (RAS) project construction drawings in order to provide the necessary rationale for increasing flows at the WQTC. Submitted the draft Facility Plan for review and received comments to address.
- Reached final completion on the Secondary Clarifiers 1, 2 and 3 Collection Mechanisms Replacement project.
- Conducted Instrumentation and Controls (I&C) testing of the Wet Weather Pumps.

FY18 Program

- Begin construction for the removal and upgrade of RAS Pumps 1 and 4, including the replacement of variable frequency drives on pumps 1 through 4.

- Send the facility plan to the state multi-agency clearing house and KDOW for final review.
- Conduct additional I&C testing and also Vibration testing of the Wet Weather Pumps.

6.2.2.5. JEFFERSONTOWN WATER QUALITY TREATMENT CENTER

MSD has completed the elimination Jeffersontown WQTC. Refer to Section 1.2.2.6 for details.

6.2.2.6. Non-Regional Water Quality Treatment Center Updates

MSD has completed the elimination of all existing non-regional WQTCs at this time. Refer to Section 1.2.2.6 for details.

6.3. CMOM ACTIVITY SCHEDULE

CMOM capital project milestones for the current reporting period as well as a look-ahead for the upcoming reporting period are provided in Figure 6.8.

Appendix A Acronyms

This Page Has Been Left Intentionally Blank

Appendix A Acronyms

AAOV	Annual Average Overflow Volume
ACD	Amended Consent Decree
ARV	Air Release Valve
BAP	Blockage Abatement Program
BGC	Beargrass Creek
BMP	Best Management Practices
BOD	Biochemical Oxygen Demand
BUD	Before "U" Dig
CC&B	Customer Care and Billing
CCP	Composite Correction Plan
CDS	Continuous Deflection Separator
CFR	Code of Federal Regulations
CGWH	Certified Grease Waste Hauler
CMOM	Capacity Management Operations and Maintenance
CPE	Comprehensive Performance Evaluations
CRD	Central Relief Drain
CRS	Community Rating System
CSO	Combined Sewer Overflow
CSOFT	Software Name
CSS	Combined Sewer System
CSSA	Continuing Sewer System Assessment
CY	Calendar Year
DMR	Discharge Monitoring Report
DSDC	Design Services During Construction
DWO	Dry Weather Overflow
eB	Enterprise Bridge (Enterprise Informatics scanning software for document management)
EGIS	Emergency Geographic Information System
EMA	Louisville Metro Emergency Management Agency
EPA	Environmental Protection Agency
EPSC	Erosion Prevention and Sediment Control
ERT	Emergency Response Team
EUM	Effective Utility Management
FCN	Field Correction Notice
FEMA	Federal Emergency Management Agency
FEPS	Final Effluent Pump Station
FM	Force Main
FOG	Fats, Oil & Grease
FPS	Flood Pump Station
FSE	Food Service Establishment
FY	Fiscal Year

Appendix A Acronyms

GASB	Governmental Accounting Standards Board
GHS	Globally Harmonized System
GIS	Geographic Information System
GLPM	Gravity Line Preventive Maintenance
GPD	Gallons per Day
GPS	Global Positioning System
H/H	Hydraulic/Hydrologic
H_2S	Hydrogen Sulfide
I&C	Instrumentation and Controls
I&I	Inflow and Infiltration
ICM	Integrated Catchment Model
ID	Identification
IOAP	Integrated Overflow Abatement Plan
ISSDP	Interim Sanitary Sewer Discharge Plan
IT	Information Technology
KDEP	Kentucky Department of Environmental Protection
KDOW	Kentucky Division of Water
KPDES	Kentucky Pollutant Discharge Elimination System
KY	Kentucky
LG&E	Louisville Gas and Electric
LIMS	Laboratory Information Management System
LOJIC	Louisville and Jefferson County Information Consortium
LTCP	Long Term Control Plan
LWC	Louisville Water Company
MCC	Motor Control Center
MCE	Mission Critical Equipment
MG	Million Gallons
MGD	Million Gallons per Day
MOU	Memorandum of Understanding
MS4	Municipal Separate Storm Sewer System
MSD	Metropolitan Sewer District (Louisville and Jefferson County)
MSDS	Material Safety Data Sheet
NACWA	National Association of Clean Water Agencies
NASSCO	National Association of Sewer Services Companies
NDD	Non-Domestic Dischargers
NFPA	National Fire Protection Association
NMC	Nine Minimum Controls
NOV	Notice of Violation
NPDES	National Pollutant Discharge Elimination System
NPS	Nightingale Pump Station
O&M	Operations and Maintenance

Appendix A Acronyms

OPC	Open Platform Communications
ORD	Office of Research and Development
ORFM	Ohio River Force Main
PACP	Pipeline Assessment and Certification Program
PCCM	Post Construction Compliance Monitoring
PLC	Programmable Logic Control
PM	Preventive Maintenance
POC	Pollutant of Concern
POTW	Publicly-Owned Treatment Works
PPE	Personal Protective Equipment
PS	Pump Station
PSC	Property Service Connection
PTF	Preliminary Treatment Facilities
QPCI	Qualified Post-Construction Inspector
RAS	Return Activated Sludge
RFP	Request for Proposal
RFQ	Request for Qualifications
RPR	Resident Project Representative
RTC	Real Time Control
S&F	Solids and Floatables
SAP	Software Name
SCADA	Supervisory Control And Data Acquisition
SCAP	System Capacity Assurance Plan
SEP	Supplemental Environmental Projects
SIU	Significant Industrial User
SOP	Standard Operating Procedure
SORP	Sewer Overflow Response Protocol
SSDP	Sanitary Sewer Discharge Plan
SSES	Sanitary Sewer Evaluation Study
SSO	Sanitary Sewer Overflow
SSOP	Sanitary Sewer Overflow Plan
SWOR1	Southwestern Outfall Relief – Phase 1
SWOR2	Southwestern Outfall Relief – Phase 2
SWPPP	Stormwater Pollution Prevention Plan
SWPS	Southwestern Pump Station
SWSG	Southwest Sluice Gate
TCN	Tracking Control Numbers
TSS	Total Suspended Solids
TV	Television
UDR	Unusual Discharge Request
UIM	Utility Information Management
UMF	Upper Middle Fork

Appendix A Acronyms

UofL	University of Louisville
USACE	United States Army Corps of Engineers
USGS	United States Geological Survey
WIN	Waterway Improvements Now
WQTC	Water Quality Treatment Center
WUS	Waters of the United States

1. PROGRAM BACKGROUND

The Louisville and Jefferson County Metropolitan Sewer District (MSD) is responsible for the operation and maintenance of the sewer system within the public right-of-way and dedicated easements in Jefferson County, Kentucky, in addition to small areas in several of the surrounding counties. The sanitary sewer collection system includes over 3,300 miles of sewers ranging from 6 inches to 27.5 feet in diameter, built between the mid-1800's and present day. The construction materials consist of brick, iron, polyvinyl chloride, clay, vitrified clay, and reinforced concrete. There are over 75,000 combined and separate sanitary manholes in the system constructed of reinforced concrete and brick materials. MSD also operates and maintains the following assets:

- 68,609 catch basins and yard drains
- 250 sanitary pump stations
- 16 flood pump stations
- 5 regional water quality treatment centers (WQTCs)

MSD is currently conducting an intensive sewer condition evaluation to comply with its federal Amended Consent Decree as well as the Capacity, Management, Operations and Maintenance (CMOM) and Nine Minimum Control (NMC) programs. The Continuous Sewer System Assessment (CSSA) program and Blockage Abatement Program (BAP) addresses certain aspects of Paragraph 24c., "CMOM (Capacity, Management, Operations and Maintenance) Programs Self-Assessment" and Paragraph 24a. "Nine Minimum Controls (NMC)" from the Amended Consent Decree (ACD).

The primary objective of evaluating infrastructure assets is to develop and implement maintenance and rehabilitation recommendations that reduce sewer overflows and improve the capacity, structural integrity and functionality of existing assets. This annual report summarizes the CSSA and BAP accomplishments for the 2017 Fiscal Year (FY17, July 1, 2016 – June 30, 2017) along with anticipated actions for FY18.

The CSSA and BAP programs require a defined approach to prioritize, perform, and track the inspection, cleaning, rehabilitation, replacement, and maintenance of sewer assets on a consistent and prioritized cycle. The two programs are also intended to improve compliance with NMC 1 and 2, which require the proper operation, regular maintenance, and maximum use of MSD's combined sewer system (CSS) to prevent dry weather Combined Sewer Overflows (CSOs) and reduce wet weather CSOs to the extent possible.

In FY08, MSD committed to performing an initial system characterization over the next 10 years. Since that time, MSD has spent over fifteen million dollars and inspected approximately 89% of the combined and separate gravity sewer system. Based on historical experience with pipe inspection and standard operating procedures that include first and second attempts to inspect pipe that is inaccessible, MSD considers a project to be completed when 85% of the line segments and 85% of the pipe footage in an assigned area are successfully inspected. By the end of FY18, at least one inspection will have been attempted for each gravity main in the system, and MSD continues to undertake second-attempt inspections in order to meet this commitment. Table 1 shows the inspection progress for the system. Table 2 shows inspection and cleaning costs per fiscal year.

Once inspection of a study area is complete, inspection data is evaluated through a pipe condition assessment process and appropriate maintenance and rehabilitation actions are taken. The inspection and

rehabilitation activities are carried out under MSD's CSSA program, while recurring maintenance activities are addressed by the BAP. The process workflow for the two programs is outlined in Figure 1 and has been updated to reflect current processes.

The BAP, a subsidiary program to the CSSA, encompasses sewer lines identified through the CSSA inspection and data analysis as having recurring maintenance needs due to root blockages, sedimentation, or oil and grease deposits. This program tracks the segments with operational defects, sets up recurring work orders, assigns work to available resources, tracks progress and documents the work performed. In the past, this program has been referred to as the Gravity Line Preventive Maintenance (GLPM) program.

Previous annual reports since FY08 describe the general programmatic structure in more detail and can be referenced in the Project WIN Annual Reports, available on the Project WIN website at http://www.msdprojectwin.org/Library.aspx under Consent Decree Reporting and included as an appendix to the Project WIN Annual Report.

Upcoming efforts will focus on continued second-attempt gravity main inspections, targeted gravity manhole inspections, risk-based inspection cycles for gravity assets, improved remediation recommendations for gravity assets, and improved flow monitoring capabilities.

Table 1. Gravity Main Inspection Status

	SMALL DIAMETER	LARGE DIAMETER	SYSTEMWIDE

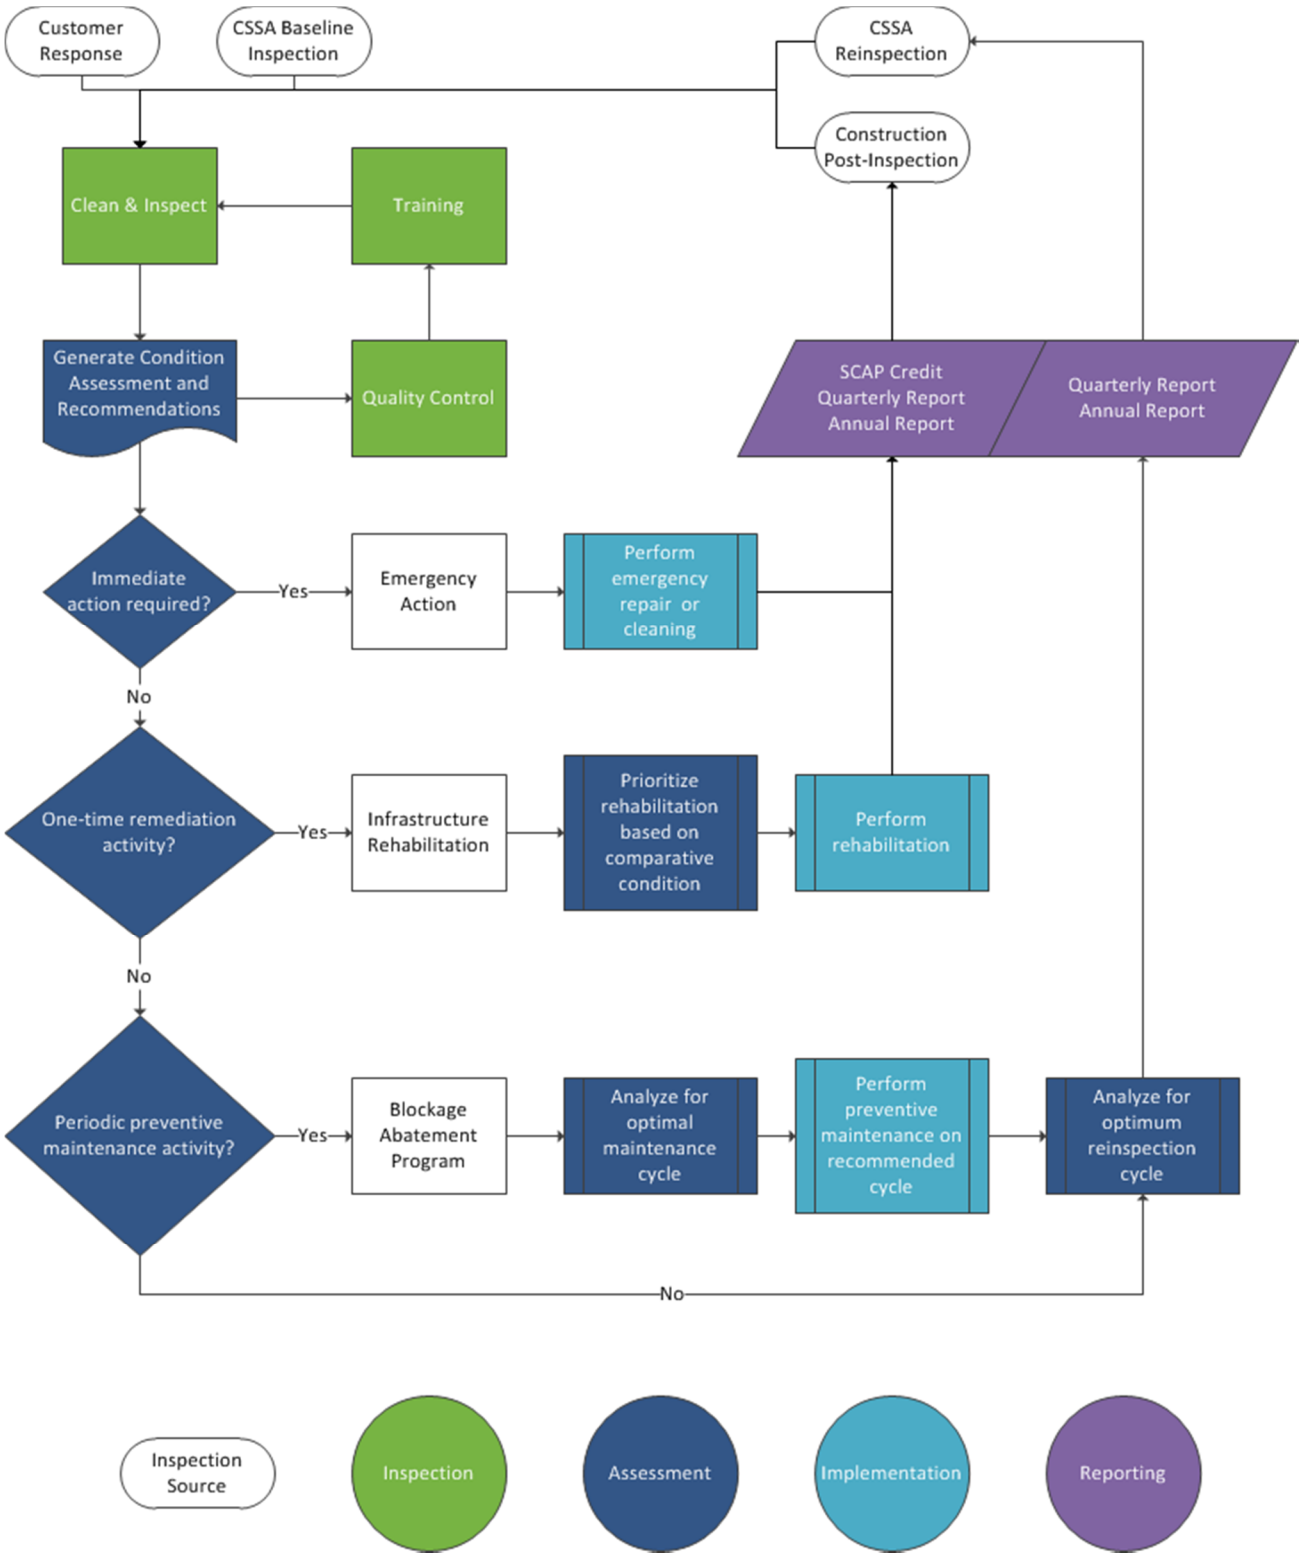
Table 2. Cleaning & Inspection Expenditure Summary

FY	INTERNAL CLEANING AND INSPECTION	CONTRACTOR CLEANING AND INSPECTION	TOTAL CLEANING AND INSPECTION
FY09	$290,346	$0	$290,346
FY10	$440,041	$1,976,449	$2,416,490
FY11	$407,921	$1,950,969	$2,358,890
FY12	$503,843	$2,035,149	$2,538,992
FY13	$401,345	$1,993,993	$2,395,338
FY14	$897,308	$961,818	$1,859,126
FY15	$292,052	$740,121	$1,032,173
FY16	$312,473	$690,365	$1,002,838
FY17	$326,154	$1,257,246	$1,583,400
Total	**$3,871,484**	**$11,606,109**	**$15,477,593**

2. DECISION FRAMEWORK

To proactively address current and upcoming infrastructure issues, a detailed decision framework has been developed including inspection, assessment, implementation and reporting in a continuous cycle, as illustrated in Figure 1. Inspection includes mainline and manhole inspections, including gravity lines and force mains, as well as flow monitoring in mains and at pump stations. Assessment includes evaluation of inspection data for major defects or issues, recommending remediation activities as needed, and prioritizing activities based on likelihood and consequence of failure. Implementation includes infrastructure rehabilitation and replacement as well as proactive maintenance activities like periodic cleaning. Reporting includes post-construction inspection and monitoring as well as calculation of credits in accordance with the approved SCAP procedure.

Figure 1. CSSA and BAP Process Workflow



3. INSPECTION

During the reporting period, the division of labor related to the assessment of MSD's collection system using internal and external resources, based on pipe diameter and internal resource availability, was managed by Engineering.

MSD employs six TVI field specialists: two field specialists are primarily dedicated to CSSA CCTV work; three are dedicated to customer request response and maintenance crew support; and one performs customer request response during periods of heavy request volumes, and CSSA work during other times. An off-shift crew continues to provide additional resources in the department. Each CSSA CCTV truck is coupled with a flusher or combination vacuum cleaner truck when resources allow, so that cleaning is a more timely and responsive aspect of their condition assessment activities. Additionally, MSD holds an annual cleaning and inspection contract to supplement internal staff.

MSD utilizes the National Association of Sewer Service Companies (NASSCO) standard Pipeline Assessment and Certification Program (PACP) coding protocols for gravity mains and employs a standard QA/QC process to ensure deliverables meet a consistent and acceptable standard. During the current reporting period, MSD maintained PACP certification for 18 employees. During the upcoming reporting period, MSD plans to expand the number of employees certified in PACP to over 30, including additional engineers, field inspectors, TVI field specialists, and support staff. All new and existing PACP-certified staff will also be trained in Manhole Assessment and Certification Program (MACP) and Lateral Pipeline Assessment and Certification Program (LACP) coding protocols to expand MSD's internal understanding of condition assessment and create opportunity for using MSD's existing PACP software for other types of inspections.

MSD uses Neztek software to communicate with the Hansen system to facilitate data transfer for PACP TV inspections from the Hansen asset management system to remote inspection software and back. Engineering staff have continued to work with IT staff to develop a strategy for integrating CCTV videos with Hansen 8 and eB, and have continued to consolidate internal and external CCTV videos and field inspection pictures in support of that effort.

During CSSA program development, MSD utilized a three-pronged approach to gather asset inspection data. Using operational knowledge and various program drivers, MSD staff identified specific areas for the following:

- Sanitary Sewer Evaluation Studies (SSESs) on targeted areas for condition assessment. Each SSES project included CCTV, manhole inspections, smoke testing, private property inspections, and wet weather inspections
- Interceptor Condition Assessments (ICAs) for CCTV and manhole inspections on large interceptors. This effort requires higher tech equipment and brighter lighting sources.
- CCTV assessment on select System Capacity Assurance Plan (SCAP) sub-basins, generally looking at small-diameter mains under 48 inches in diameter. Inspection of sewers in these areas began in FY11.

As the initial baseline data-gathering effort has progressed significantly for gravity mains, focus has shifted to the following:

- Inspection of small-diameter gravity mains by SCAP sub-basins using CCTV and Total Integrated Sonar and CCTV Inspection Technology (TISCIT). Initial inspection has been performed in each basin and efforts are focused on second-attempt inspections.
- Inspection of large-diameter gravity mains using CCTV, TISCIT, sonar and laser profiling. Baseline condition assessment will be finalized in FY18.
- Inspection of manholes by SCAP sub-basins regardless of main size. Manhole inspection areas are identified and prioritized based on requirements to support IOAP project post-construction compliance monitoring; to abate dry weather discharges due to O&M issues; and to reduce I/I and increase system capacity during wet weather.

Gravity main inspection projects completed during the reporting period are included in Table 3. The completion rate shown includes all inspections performed during the reporting period as well as unsuccessful inspections closed at the end of the project, which may span reporting periods. Gravity main inspection projects anticipated to be completed in the next reporting period are detailed in Table 4. A map depicting these project areas is included in Figure 2.

Gravity manhole inspection projects completed during the reporting period are included in Table 5. Gravity manhole inspection projects anticipated to be completed in the next reporting period are detailed in Table 6. A map depicting these project areas is included in Figure 3.

4. ASSESSMENT

Under SSES and ICA efforts, a findings report was developed for each study area including a summary of the area and issues present, rehabilitation or remediation and maintenance recommendations, cost estimates, maps, bid documents, and a determination of the future inspection interval. In order to maximize the benefit of the CSSA program, MSD moved in FY16 to utilize existing teleinspection reports in conjunction with contracted manhole inspections that are used to generate recommendation packages. A pilot process was created to generate recommendations for rehabilitation and maintenance activities, including cost estimates based on current contract prices, based on inspections and other data housed in Hansen and the GIS. This process includes recommendations for rehabilitation and maintenance activities, prioritized based on comparative condition to the rest of the system.

Through the updated assessment process, SCAP sub-basins and smaller targeted areas are selected for analysis to identify the cause of specific sewer overflows, capacity and performance, or Inflow and Infiltration (I/I) problems. Recommendations are generated the same day using available inspection data, including lining or point repairs for small-diameter mains and lining or frame repair / replacement for manholes, and reviewed by Engineering staff. Additional engineering support may be acquired as needed to develop rehabilitation solutions on a case-by-case basis for large-diameter gravity mains.

In FY17, MSD worked to verify the efficacy of the recommendations. Feedback was solicited from field inspection and Operations staff as well as contractors. The feedback was generally positive for manholes and small-diameter mains and included recommendations for minor alterations to improve the process. During FY18, feedback will be included in the tool, and options will be explored for improving recommendations for large-diameter gravity mains.

Additional next steps to begin in FY18 include translating the current condition assessment scoring system to a likelihood of failure (LOF) index, taking into account not only current condition but anticipated remaining life before failure based on attributes like age and material. LOF can then be used to inform prioritization of rehabilitation projects, as well as frequency of reinspection beyond baseline in the continuous assessment process, in a consistent and data-driven process based on risk.

A parallel initiative involves the development of consequence of failure (COF) index, which rate the criticality of a piece of infrastructure. Critical infrastructure is defined as combined and sanitary sewer infrastructure that would have a significant negative impact to the community in the event of failure. MSD has undertaken several initiatives to assist in determining infrastructure that qualify as critical. In FY17, MSD worked through the draft consequence of failure matrix developed by the Wet Weather Team in FY10 to identify any outstanding factors as well as data sources for the criteria within Hansen or the GIS. Efforts in FY18 will focus on developing a process to calculate criticality out of existing data sources, and identifying data gaps and next steps to gather data to fulfill the COF index.

5. IMPLEMENTATION

5.1. INFRASTRUCTURE REHABILITATION

Rehabilitation activities are selected and prioritized through the assessment process. Utilizing the recommendations, projects are advertised and awarded to contractors or assigned to annual contractors and rehabilitation work is completed. Table 7 summarizes project areas completed in the current reporting period. Table 8 summarizes work projected for the upcoming reporting period.

Table 7. Completed Rehabilitation Projects

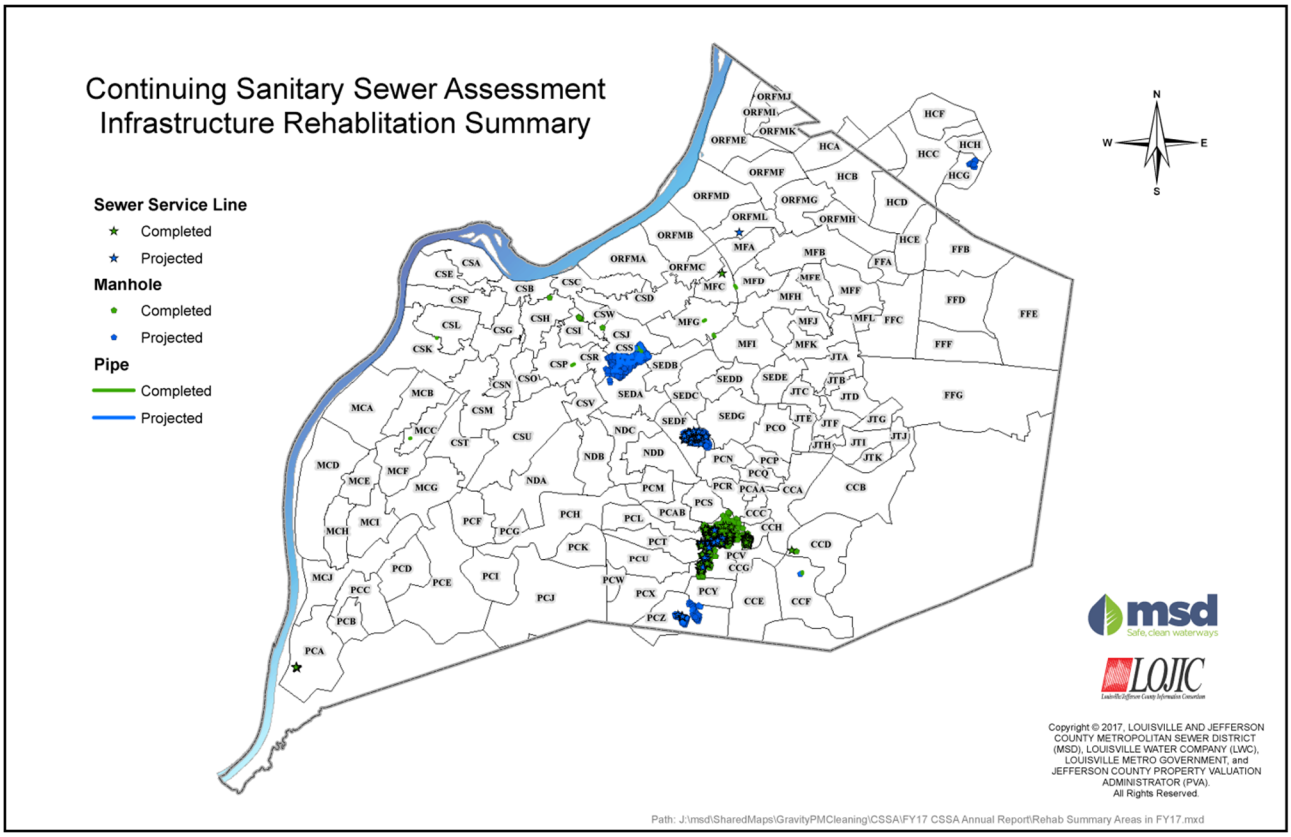
Figure 4. Completed and Projected Rehabilitation Areas



5.2. BLOCKAGE ABATEMENT PROGRAM

MSD currently performs condition-driven maintenance activities on portions of the sewer system under the BAP program as a refinement of the gravity line preventive maintenance that MSD has implemented over the years. Maintenance activities related to this program include flushing, vacuum cleaning, root cutting, chemical root treatment, and chemical grease treatment. As the system is inspected, MSD identifies gravity mains exhibiting operational or maintenance-related defect conditions and initiates routine maintenance activities on those assets as recommended. Consistent, periodic preventive maintenance of the sewer system to maximize asset life and minimize overflows, property damage and health risks is the primary goal of the program.

MSD is re-evaluating the approach of the BAP, based on the assessment results generated through the tool discussed previously. This new approach will allow MSD to prioritize and schedule maintenance activities, reinspection, and reassessment. Gravity mains currently maintained within the program will remain and sewer lines identified as needing recurring maintenance through proactive condition assessment will be incorporated as needed. Over time, the gravity mains in the program will be reviewed to determine if the current maintenance schedule needs to be adjusted or if the asset should be remediated to eliminate a recurring maintenance activity. The sewers requiring intensive maintenance will be placed on a priority list for replacement and correction to minimize future maintenance. MSD will focus on reviewing reported overflows

caused by blockages, grease, or roots to actively re-inspect and maintain lines to keep the overflows from recurring.

Completed BAP activities for the reporting period are summarized in Table 9. Projected BAP activities for the upcoming reporting period are summarized in Table 10.

Table 9. Completed BAP Activities

ACTIVITY	PIPE (LF)	PIPE (MILES)
Flushing	789,559	149.5
Vacuum Cleaning	1,448	0.3
Root Cutting	40,447	7.7
Chemical Root Treatment	390,059	73.9
Chemical Grease Treatment	2,557	0.5
Total	**1,224,070**	**231.8**

Table 10. Projected BAP Activities

ACTIVITY	PIPE (LF)	PIPE (MILES)
Flushing	727,209	137.7
Vacuum Cleaning	3,000	0.6
Root Cutting	54,736	10.4
Chemical Root Treatment	400,000	75.8
Chemical Grease Treatment	5,000	0.9
Total	**1,189,945**	**225.4**

6. REPORTING

MSD's approved SCAP manual documents the process for accumulating capacity credits through I/I removal projects and estimated flow reduction from these projects, credits are calculated from I/I removal, and how credits are tracked and distributed to new flow requests within Hansen. MSD calculates these credits for each rehabilitation project completed, as well as for maintenance activities completed and illicit connections removed from the system.

During FY17, SCAP credit calculation for rehabilitation projects was automated to account for remediation activities performed by contractors in response to customer issues in addition to project areas.

Additional efforts were made to review work orders completed by MSD Operations and calculate credits as appropriate. During this process, MSD staff identified process and documentation improvements that will allow credits for maintenance activities to be automated and reported in a more consistent and timely manner. These improvements will be implemented in FY18 and beyond as resources allow.

Quarterly reports will continue to include progress on inspection and maintenance efforts and include regular updates to the SCAP balance. Annual reports will continue to include programmatic updates on progress, refinements, and upcoming efforts.

msd
Safe, clean waterways

What you don't see could harm you!

Sewers can overflow into waterways during rainstorms.

Those waters could contain harmful bacteria, which can make you sick.

Rainwater can overwhelm the sanitary sewer system and cause overflows into local waterways. You should **minimize contact with waterways to be safe during storms and even for 48 hours after the rain has ended. During these times, avoid swimming, fishing, wading and splashing in the water.**

MSD has made significant progress in decreasing sewer overflows into our waterways, but there is more work to be done. Please follow the instructions that are posted on our overflow advisory signs. **Wash with warm, soapy water** if you come into contact with water that may have been contaminated by a sewage overflow.

Safe, clean waterways

You can help improve our waterways

What we do on our land and in our homes affects our waterways

Rainwater flows over rooftops, lawns, parking lots and roadways as it travels to storm drains and ditches. This water collects pollutants along its journey—such as lawn chemicals, oil, litter and pet waste—which flow directly to our waterways.

Put pet waste in the trash. Dogs in Jefferson County produce four dump truck loads of waste everyday. Please dispose of it in the trash so the bacteria does not enter our waterways.

Dispose of fats, oils, grease and food scraps in the trash to prevent clogging your sewer line and causing a sewage backup into your home.

Compost grass clippings, and decrease use of fertilizer and pesticides. When it rains, these chemicals make their way to our streams.

Do not flush medications. Once, it was common practice to flush medications down the toilet. Your doctor or pharmacist may have directed you to do this. We now know that these substances are bad for our environment. The wastewater treatment process does not remove the substances contained in them, so they end up back in our waterways.

Please properly dispose of your medications at:

- **Jefferson County Sheriff's Office**
  531 Court Place, Suite 600
  M-F, 8 am to 4 pm
- **St. Matthews Police Department**
  3940 Grandview Avenue
  M-F, 8 am to 4 pm

Delay using washing machines and dishwashers during rain events —they can fill up the sanitary sewers and contribute to sewer overflows.

'Flushable' wipes...

don't let the name fool you.

Avoid a potential backup in your home by tossing wipes into the trash.

Wipes do not break down, even if their labels read "flushable." They can cause problems for plumbing systems and lead to sewage backups in your home or work place. Wipes also clog and damage sewer line pumps, screens and other mechanical parts at MSD water quality treatment centers.

Avoid the mess, toss your wipes into the trash!

Safe, clean waterways

700 West Liberty Street | Louisville, KY 40203-1911
502.540.6000 | louisvillemsd.org

April 21, 2017

Dear Louisville Metro Resident:

Throughout MSD's service area, there are hundreds of points where a combination of wastewater and rainwater may discharge onto streets and into local waterways when it rains. These sewer overflow locations act as relief when the sanitary system becomes overwhelmed with rainwater.

MSD's Project WIN (Waterway Improvements Now) defines a plan to rehabilitate our aging sewer system and reduce the number of overflows that send raw, untreated sewage into our local waterways during rain events. In the past year we have moved closer to that goal by:

- Completing a 36-year journey to eliminate more than 300 inefficient and outdated package wastewater treatment plants scattered throughout the community, leaving us with five regional water quality treatment centers;
- Constructing underground storage to lessen sewer overflows. The 17 million-gallon Logan Street Basin is well underway, and is one of seven storage basins citywide in planning or construction phases, along with a 2.5-mile tunnel under Louisville's downtown that together will help us achieve the goal of capturing and treating 98 percent of combined sewer overflow volume by 2020.

You have received this letter because you live near Beargrass Creek, the Ohio River or one of their tributaries. Because of this, you are more likely to come in contact with polluted water from one of these overflows. As MSD continues its work to reduce sewer overflows, we must caution you to stay out of these waterways during—and for 48-hours after—a rain event.

The enclosed flyer provides easy steps that you can take to protect your health and safety should you come in contact with sewage-polluted water. It is important to keep children and pets out of these waterways during and following a rain event.

MSD seeks to be a good steward of our ratepayers' dollars, and we are committed to providing safe, clean waterways for our community. We continually collect water-quality data and seek ways to improve our creeks, streams and the Ohio River for recreational use, as well as fish and wildlife habitats.

Please call 502.587.0603 or visit us online at www.msdprojectwin.org for more information about Project WIN, and become a part of the WINning team. Together we can achieve safe, clean waterways for a healthy and vibrant community.

Sincerely,

James A. Parrott
Executive Director

Message to the community
—aging critical infrastructure

Tony Parrott
MSD Executive
Director

Louisville, like many cities, is faced with aging infrastructure that must be maintained and refurbished in order to continue to serve a growing community. Some of MSD's underground infrastructure predates the Civil War, and much of our flood protection system was built in the 1940s and '50s. In addition, an increased frequency of severe storms in recent years has amplified the need for our system to be ready to protect against the worst of today's weather.

MSD has completed an extensive analysis of these systems and has developed a Critical Repair & Reinvestment Plan to address the challenges posed by this aging infrastructure. The difficult truth is the solutions come with a price tag of $4.3 billion over the next 20 years.

We want to hear from you

Input is needed from the community to determine how soon the critical projects should be completed. The Critical Repair & Reinvestment Plan is online for your review, as well as available in each of Louisville's public library branches.

To view the Plan and provide feedback, visit:
LouisvilleMSD.org/CriticalRepairPlan

At MSD, we're here to make Louisville a better place.
A cleaner place. A healthier place. To have a real impact on the quality of life of the place we all call home.
Working together, we can continue to pursue our Vision of "Safe, Clean Waterways for a Healthy and Vibrant Community."

Sincerely,
James A. Parrott
MSD Executive Director

LouisvilleMSD

WE ALSO MAKE RAIN, RAIN GO AWAY.

You may think you know MSD, as well as all that MSD does for you. But did you know that we manage more than 600 million gallons of water on a high rain-event day? Or that we're planting 1,000 trees a year in the metro area for the next eight years to redirect 1.35 million gallons of rainwater annually from entering our sewers? Or that we educate more than 4,500 local students a year on how to conserve and protect our waterways?

We're MSD. And we're doing more for you than you ever imagined. Learn more at **LouisvilleMSD.org.**

Message to the community—aging critical infrastructure

February/March 2017

Louisville, like many cities, is faced with aging infrastructure that must be maintained and refurbished in order to continue to serve a growing community. Some of MSD's underground infrastructure predates the Civil War, and much of our flood protection system was built in the 1940s and '50s. In addition, an increased frequency of severe storms in recent years has amplified the need for our system to be ready to protect against the worst of today's weather.

Tony Parrott
MSD Executive Director

MSD has completed an extensive analysis of these systems and has developed a Critical Repair & Reinvestment Plan to address the challenges posed by this aging infrastructure. The difficult truth is the solutions come with a price tag of $4.3 billion over the next 20 years, including almost $500 million to finish the remaining Consent Decree projects to meet the federal order to reduce sewer overflows.

We want to hear from you:

Louisville can no longer avoid renewing and restoring its vital wastewater, flood protection and stormwater management facilities. Input is needed from the community to determine how soon the critical projects should be completed.

The entire Critical Repair & Reinvestment Plan is online for your review, as well as available in each of Louisville's public library branches. To view the Plan and provide feedback, visit **LouisvilleMSD.org/CriticalRepairPlan**

The bottom line is this: at MSD, we're here to make Louisville a better place. A cleaner place. A healthier place. To have a real impact on the quality of life of the place we all call home. Working together, we can continue to pursue our Vision of "Safe, Clean Waterways for a Healthy and Vibrant Community."

Sincerely,

James A. Parrott
MSD Executive Director

MSD Bill Insert Feb/Mar 2017.indd 1 1/23/17 5:10 PM

‘Flushable’ wipes… are **more expensive** than you think

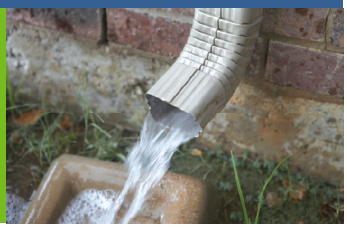
Toss your wipes into the trash—NOT into the toilet!

Wipes do not break down quickly, even if their labels read “flushable.” They can cause problems for home plumbing systems and lead to sewer backups. Wipes also clog and damage sewer line pumps, screens and other mechanical parts at water quality treatment centers. This costs wastewater utilities nationwide a great deal of expense. MSD employees must repair clogged pumps an average of two out of every three days. Wipes cause 60 percent of these clogs.

Shawn Smith clears a clog containing flushable wipes at MSD’s Cedar Creek Water Quality Treatment Center.

Disconnecting **your downspouts** can **pay big** dividends

one-time incentive
$100 per downspout*
disconnection from sewer system



Keeping rainwater out of the sewer system helps prevent sewer overflows into our local waterways and sewer backups into homes.

To see if your downspouts or sump pump connect to the sewer system, residential customers can contact MSD at **502.587.0603** or **CustomerRelations@LouisvilleMSD.org.**

Downspout Disconnection Program

A typical 8-inch neighborhood sanitary sewer pipe can handle wastewater from approximately 200 homes. This pipe can become overwhelmed when as few as six homes have downspouts connected to the sewer line. To relieve this situation, MSD offers residential customers a one-time incentive of **$100 per downspout*** for disconnection from the sewer system. **Customers must contact MSD in advance of the disconnection.**

Sump Pump Disconnection

The typical 8-inch neighborhood sanitary sewer pipe can become overwhelmed with as few as eight sump pumps connected to the system. MSD’s Plumbing Modification Program **pays for a licensed plumber to disconnect the sump pump from the sanitary sewer** and redirect the water in a safe and effective way.

* To be eligible to receive the downspout disconnection incentive payment, MSD MUST INSPECT your downspouts PRIOR to disconnection. Offer expires 11-30-2017.

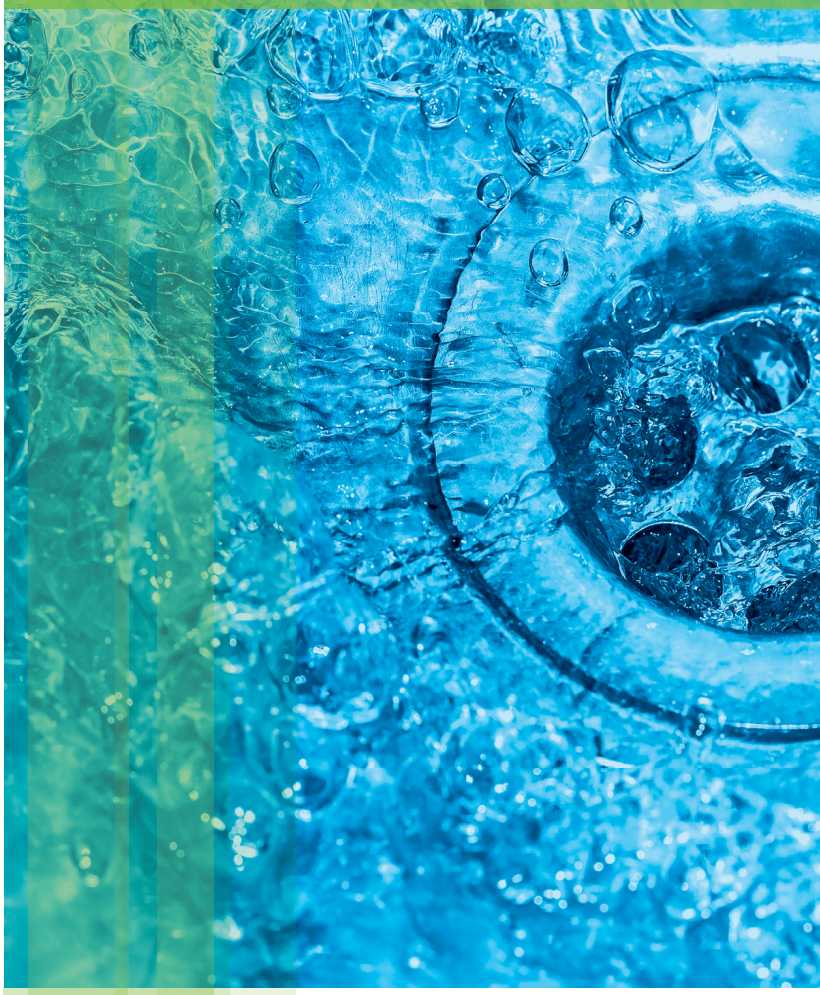
HOW TO PROTECT YOUR HOME FROM BACKUPS

FOG—FATS, OILS AND GREASE



Fats, Oils and Grease can be a real drain on clean streams and rivers

If you wash fats, oils and grease (FOG) down your drain, a build up may occur in your sewer line. This may clog the sewer pipe and cause sewage overflows into your home, onto the ground and into our local waterways.

It is important to keep our sewers fat free.

When greasy wastes are washed into the plumbing system through your sink or garbage disposal, they can stick to the pipes. **Using your garbage disposal or a grease-cutting detergent does not keep FOG out of the plumbing system.** Garbage disposals shred solid material into smaller pieces, but do not prevent FOG from flowing down the drain. Grease dissolving detergents can pass FOG through your household plumbing, but the grease may still cause problems in the sewerlines.

Effects of FOG in sewer pipes:

- Raw sewage overflows into your home or yard.
- Raw sewage overflows into our parks and streams.
- Potential contact with disease-causing bacteria and viruses.
- Increased operational costs for you as an MSD customer.
- Blockages, obstructions and raw sewage overflows that affect others in your community.

Tips to help keep FOG out of the sewers:

Can the grease!

Never pour fats, oils and grease down a sink, drain or toilet. Pour used grease into an empty, heat-safe container, such as a soup can, and store it in the freezer. Once the grease has become solid, toss the can into the garbage.

Scrape your food waste into the trash. Wipe all pots, pans, dishes and cooking utensils with a paper towel to soak up grease before washing them.

Catch the scraps in your sink with a basket or strainer, instead of using the garbage disposal, and throw them away in the trash can.

Recycle your deep-fryer oil by taking it to Louisville Metro's grease drop-off location at 7501 Grade Lane.

Where does FOG come from?

Fats, oils and greases come from your kitchen.

- Butter
- Cake icing
- Cooking oil
- Gravy
- Ice cream
- Lard
- Margarine
- Mayonnaise
- Meat and fat
- Salad dressing
- Sauces
- Shortening

Appendix H CSO Revised Historical Volume

This Page Has Been Left Intentionally Blank

The data in this appendix includes updated CSO flow data developed through FY16 for the initial 33 CSOs identified as the highest priority to review, correct data, document SOPs, and implement changes, as well as two additional CSO locations included in the review due to interaction with priority CSOs.

For these CSO locations, MSD performed site visits including elevation surveys, performed detailed analysis, investigated equipment configurations, and investigated PLC programming or monitoring program logic. This has led to the development of an SOP for each CSO that describes the existing monitoring equipment, configuration, and flow calculation in use as of December 31, 2016, and evaluates the effectiveness of the existing setup. If a more effective arrangement was recommended, MSD added the proposed arrangement to the SOP for implementation and determined if historical data could be updated. In cases where the historical data could be updated, MSD has developed revised volumes for reporting. In some cases, historical volumes could not be recalculated based on the available data (for instance, CSOs influenced by river or creek elevation for which there was no available historic level data). Historical data for all CSOs reviewed during this reporting period has been included in this appendix for consistency.
