Subject: Mid-Year Status Report
July 1, 2023 through December 31, 2023
Civil Action No. 3:05-cv-236-S
DOJ Case No. 90-5-1-1-08254

Attention Director and Chiefs:

Please find attached our Mid-Year Status Report, prepared in accordance with Paragraph 41 of our Second Amended Consent Decree. This report is for the period July 1, 2023, through December 31, 2023.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gather and evaluate the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering such information, the information submitted is, to the best of my knowledge and belief, true, accurate and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

If you have questions or need additional information, please contact me at (502) 540-6136.

Sincerely,

DocuSigned by:

INTRODUCTION

The Louisville and Jefferson County Metropolitan Sewer District (MSD) has entered into a Second Amended Consent Decree (2ACD) with the Kentucky Division for Environmental Protection (KDEP) and the United States Environmental Protection Agency (EPA). The Second Amended Consent Decree was signed by United States District Judge and entered in United States District Court, Western Division of Kentucky, Louisville Division on September 15, 2022.

This Second Amended Consent Decree Mid-Year Status Report is submitted in accordance with Paragraph 41 of the 2ACD. After discussion with the EPA and KDEP on November 15, 2023, the content included in the Mid-Year Status Report (MYSR) was evaluated in order to better align with the requirements outlined in the 2ACD.

This MYSR, and all future MYSRs, will include the following:

- Text updates for
 - Authorized and Unauthorized Discharges
 - Progress toward projects included in Discharge Abatement plans
 - Proposed changes to the SORP
- Gantt charts showing progress during the previous six-month period and anticipated progress during the next six-month period for projects conducted to comply with the requirements of the 2ACD
- Appendices including
 - Reports of all authorized and unauthorized discharges
 - Bypasses at Water Quality Treatment Centers
 - Projects identified in the IOAP and their associated assets
 - Morris Forman plant flows and associated CSO activations.

Full updates for the programs included in this report will be reported in the Annual Report. For consistency, the same report structure and outline will be used for the MYSR and the Annual Report.

This report covers the time period from July 1, 2023, through December 31, 2023. The performance metrics used for 2ACD reporting represent service areas subject to the 2ACD, which include Jefferson County and Crestwood, Kentucky. MSD's full regional service area has grown beyond these service areas. The structure for this report is outlined as follows:

Section 1: Project Waterway Improvements Now (WIN) Program Performance Overview – Project WIN is MSD's program to respond to the Federal Consent Decree. Project WIN includes a series of sewer overflow reduction projects defined in the Integrated Overflow Abatement Plan (IOAP). Project WIN also includes reducing overflows through enhanced operating procedures developed under the Nine Minimum Control (NMC) and Capacity, Management, Operations and Maintenance (CMOM) programs. This section provides an accounting of the current reporting period and the cumulative reductions in volume and in number of occurrences of Unauthorized Discharges from the Sanitary Sewer System (SSS), Combined Sewer System (CSS), and Water Quality Treatment Centers (WQTCs), and discharges from MSD's Combined Sewer Overflow (CSO) locations identified in MSD's Morris Forman Water Quality Treatment Center (WQTC) Kentucky Pollutant Discharge Elimination System (KPDES) permit. This section also provides an accounting of bypasses at MSD's WQTCs that occurred during the current reporting period.

Section 2: Program Activities for Discharge Abatement Plans – This section provides documentation of projects and activities conducted during the current reporting period to implement requirements of the 2ACD, including the Final Long Term Control Plan (LTCP), Final Sanitary Sewer Discharge Plan (SSDP), and Additional Early Action Projects (AEAPs).

Section 3: Program Activities for Nine Minimum Controls – This section provides documentation of projects and activities conducted during the current reporting period to continue implementation of this program for compliance with the 2ACD.

Section 4: Program Activities for Capacity Management, Operations and Maintenance (CMOM) – This section provides documentation of projects and activities conducted during the current reporting period to continue implementation of this program for compliance with the 2ACD.

Section 5: Program Activities for Sewer Overflow Response Protocol – This section provides documentation of projects and activities conducted during the current reporting period to continue implementation of this program for compliance with the 2ACD.

Section 6: Program Activities for Public Outreach, Education, Notification and Participation – This section provides documentation of projects and activities conducted during the current reporting period to support MSD's Nine Minimum Controls and Capacity Management, Operations and Maintenance Programs.

Section 7: Program Activities for Asset Management – This section describes the scope, schedule and status for activities that were active during the current reporting period for continued compliance with the 2ACD.

SECTION 1: PROJECT WATERWAY IMPROVEMENTS NOW (WIN) PROGRAM PERFORMANCE OVERVIEW

1.1. RAINFALL

The number and the volume of wet weather overflows is directly related to the amount of rain that has fallen during the reporting period. No new rain gauges have been installed by MSD during the reporting period, and the total network currently has 46 rain gauges, as shown in Figure 1.1. Nine gauges are located within Indiana, eight within adjacent Kentucky counties and the remaining twenty-nine are within Jefferson County. MSD plans to continue to expand the rain gauge network as appropriate sites are identified. Figure 1.2 shows the Jefferson County average daily rainfall amounts by month for the reporting period, based on the monthly average of all MSD rain gauges, compared with the average since FY19.

1.2. AUTHORIZED DISCHARGES — WET WEATHER CSOs

At the end of the reporting period, MSD maintained 98 CSOs in operation. Discharges at permitted CSO locations that are observed during rain events by telemetry only are recorded with MSD’s flow monitoring data.

1.2.1. CURRENT REPORTING PERIOD

Table 1.1 includes a summary of wet weather CSO discharges that occurred during the current reporting period. Refer to Appendix A for a detailed listing of discharges that occurred during the current reporting period.

Table 1.1. Wet Weather CSO Discharge Summary - Current Reporting Period

DUE TO	OCCURRENCES	VOLUME (MG)
LACK OF SYSTEM CAPACITY	445	902

1.2.2. CUMULATIVE DISCHARGE REDUCTIONS

MSD is required to achieve 85 percent or greater capture throughout the combined sewer system (CSS). When fully implemented and operational, MSD’s suite of wet weather CSO control projects are modeled to achieve up to 95 percent capture of the wet weather combined sewage generated in the service area during the Typical Year, which greatly exceeds the EPA’s Presumption Approach requirement of 85 percent. Compliance with the 85 percent capture was achieved with completion of the Waterway Protection Tunnel in 2022. MSD expects to achieve up to 95 percent modeled performance by December 31, 2026, upon completion of the Morris Forman WQTC Sedimentation Basin Rehabilitation Project per the State Agreed Order Number 150220 Corrective Action Plan. The final phase of the Middle Fork Relief Interceptor, Wet Weather Storage, & Diversion Project, scheduled for completion in 2030, is also expected to provide additional combined system overflow benefits.

Table 1.3 shows the modeled baseline and reduction in number and volume of CSOs. Figure 1.3 shows the modeled reduction in occurrence and Figure 1.4 shows the modeled reduction in volume of CSOs for the Typical Year. Values are based on model simulations of the 2001 Typical Year with the "baseline" projects implemented (Sanitary Sewer Discharge Plan and other existing Combined Sewer System facility improvements) and the most recently compiled Long Term Control Plan project model. Changes over time are approximated. Modeling results assume the Morris Forman WQTC is operating at full capacity. This data is provided for information only. The modeling results do not reflect a specific commitment to a set number of activations, cumulative volume or total minutes of overflow at each CSO, nor do they represent a cumulative commitment to residual Annual Average Overflow Volume (AAOV). There are no target commitments for number of activations at each individual CSO. The target commitment for the system is based on an 85% capture, resulting in a total residual AAOV of 2,955 MG per Typical Year. The AAOV, derived from the InfoWorks CSO hydraulic model, includes the modeled AAOV for the permitted CSOs as currently constructed, and is included as Appendix B.

Figure 1.1. MSD Rain Gauge Network

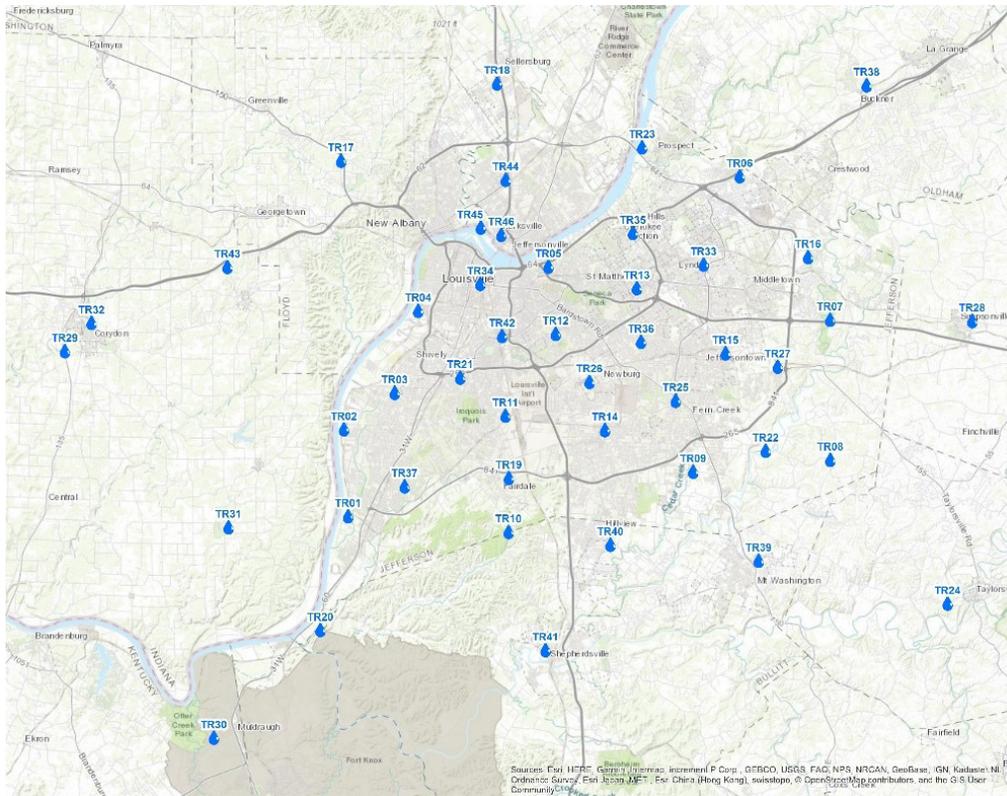

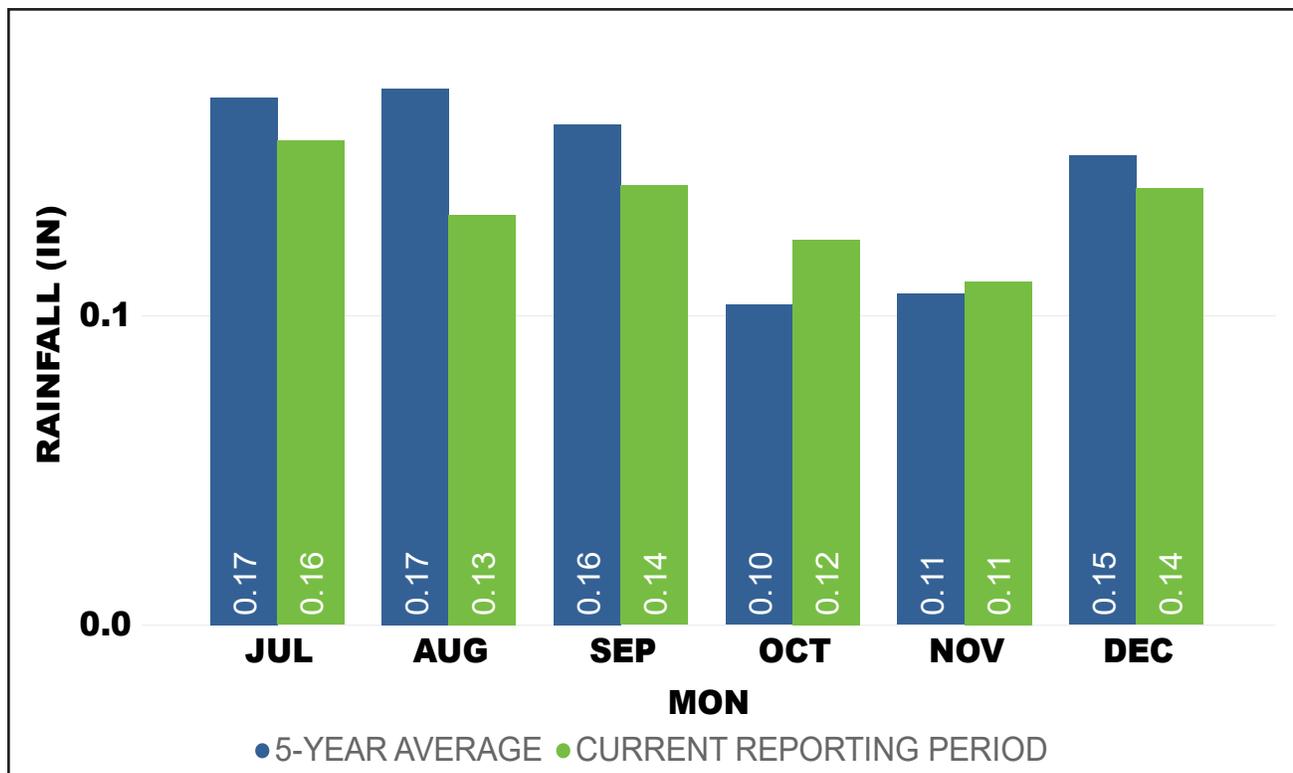

Figure 1.2. Daily Average Rainfall by Month

1.3. UNAUTHORIZED DISCHARGES — WET WEATHER SSOs

1.3.1. CURRENT REPORTING PERIOD

Table 1.2 includes a summary of wet weather SSO discharges by cause during the current reporting period. Refer to Appendix C for a detailed listing of discharges that occurred during the current reporting period.

Table 1.2. Wet Weather SSO Discharge Summary

DUE TO	OCCURRENCES	VOLUME (GAL)
ELECTRICAL PROBLEMS AT MSD	1	30,300,000
LACK OF SYSTEM CAPACITY	5	486

1.3.2. CUMULATIVE DISCHARGE REDUCTIONS

In 2007, MSD had an estimated 218 modeled SSO occurrences for the 10-year storm event. MSD is required to eliminate all 197 modeled SSOs for the 2-year storm event and mitigate the remaining SSOs. Modeled SSO occurrences are required to be reduced to a level of control (LOC) for the 5-year and 10-year storm events. The modeled reduction is based on projections using current proposed solutions (as of December 31, 2023). Actual projections are subject to change as future projects are designed in detail and constructed. Table 1.4 shows the modeled baseline and reduction in number and volume of SSOs. Figure 1.5 shows the modeled reduction in occurrence and Figure 1.6 shows the modeled reduction in volume of SSOs for the 2-, 5-, and 10-year storm events.

1.4. UNAUTHORIZED DISCHARGES — DRY WEATHER CSOs

Table 1.5 summarizes dry weather CSO discharges by cause during the reporting period. Refer to Appendix D for a detailed listing of discharges that occurred during the reporting period.

1.5. UNAUTHORIZED DISCHARGES — DRY WEATHER SSOs

Table 1.6 includes a summary of dry weather SSO discharges by cause during the current reporting period. Refer to Appendix E for a detailed listing of discharges that occurred during the current reporting period.

1.6. BYPASSES AT WATER QUALITY TREATMENT CENTERS

Project WIN Quarterly Report 18 included a memorandum, provided as Appendix K in that report, which described the analysis of 44 bypass events that occurred between July 1, 2008, and December 31, 2009. This analysis delineated bypasses into four categories, which were Capacity, External Power Failures, Equipment Failure (Mechanical, Electrical, or Structural), and Human Error. An assessment of bypasses is performed to determine the root cause of each bypass, the failure category, corrective actions to be taken, possible programmatic solutions, and a corrective action completion date.

Table 1.7 includes a summary of bypasses by cause during the current reporting period. Refer to Appendix F for a detailed listing of bypasses that occurred during the current reporting period.

Table 1.3. Wet Weather CSO Cumulative Reduction Modeled Projection - Summary

YEAR	TYPICAL YEAR OCCURRENCES	TYPICAL YEAR VOLUME (MG)
2007	2,683	3,510
2023	193	340
2034	193	340

Table 1.7. Bypass Summary

DUE TO	OCCURRENCES	VOLUME (GAL)
POWER FAILURE LG&E	2	110,300,000

SECTION 2: PROGRAM ACTIVITIES FOR DISCHARGE ABATEMENT PLANS

2.1. INTEGRATED OVERFLOW ABATEMENT PLAN (IOAP)

As a requirement of the original Consent Decree (CD) and the Amended Consent Decree (ACD), MSD prepared and submitted, for KDEP/EPA review and joint approval, Sanitary Sewer Discharge Plans (SSDP) designed to eliminate Unauthorized Discharges. MSD also prepared and submitted Long Term Control Plans (LTCP), for KDEP/EPA review and joint approval, pursuant to the CSO Control Policy. These plans were submitted under the title of the Integrated Overflow Abatement Plan (IOAP).

MSD developed these Discharge Abatement Plans (DAPs) for the elimination of Unauthorized Discharges, the reduction and control of discharges from CSO locations identified in the Morris Forman WQTC Kentucky Pollutant Discharge Elimination System (KPDES) permit, and the improvement of water quality in the receiving waters. MSD prepared conventional and innovative or alternative designs as part of each plan, including but not limited to: sewer rehabilitation, sewer replacement, sewer separation, relief sewers, above ground or below ground storage, high rate Secondary Treatment, illicit connection removal, remote wet weather Secondary Treatment facilities, and other appropriate alternatives. Designs were based on sound engineering judgment and in accordance with generally accepted engineering design criteria and may include interim remedial measures to reduce pollutant loading and improve water quality in the short term while alternatives for final remedial measures are being developed, evaluated and implemented.

In 2021, MSD, KDEP and EPA completed negotiation of the Second Amended Consent Decree (2ACD) to amend, reprioritize and expand upon some of the provisions set forth in the ACD. MSD had completed many of the requirements of the ACD, including construction of 47 of the 63 SSDP projects and construction of 24 of the 25 LTCP projects required under the ACD. The completed projects resulted in preliminary finding of bacterial reductions in the Ohio River and Beargrass Creek watersheds based on water quality monitoring and system hydraulic modeling. However, MSD had spent approximately \$1B on CD and ACD implementation, and was experiencing changed circumstances for other assets. KDEP and EPA agreed that additional system work was required in addition to a reprioritization of the work required under the ACD. The 2ACD requires Additional Early Action Plan (AEAP) projects to remediate the Paddy's Run Flood Pump Station (FPS), Morris Forman WQTC, and nine critical interceptors. Because these specific projects were in addition to the projects required under the SSDP and LTCP, the 2ACD also modified schedules for the completion of the few remaining projects under the approved SSDP and LTCP plans, as discussed in the following subsections. The 2ACD also requires the inclusion of an Asset Management Plan, which is discussed in SSection 7: Program Activities for Asset Management.

2.2. SANITARY SEWER DISCHARGE PLAN (SSDP)

The Sanitary Sewer Discharge Plan (SSDP) addresses the overflows and unauthorized discharges from the Separate Sewer System (SSS). Multiple plans have been submitted under this program: the Updated Sanitary Sewer Overflow Plan (SSOP), submitted February 10, 2006; the Interim Sanitary Sewer Discharge Plan (ISSDP), approved July 24, 2008; the Final SSDP, approved February 12, 2010; a revised SSDP, approved June 19, 2014; and the most recent revision of the SSDP, approved May 19, 2021. The approved documents can be viewed on the MSD Project WIN website, msdprojectwin.org. Discharge locations associated with SSDP Projects can be found in Appendix G.

The ACD required SSDP projects to be completed by December 31, 2024. Per Paragraph 38.a.(3) of the 2ACD, schedules for any SSDP project cannot extend beyond December 31, 2035.

The Idlewood Inline Storage project was certified as complete on August 18, 2023. The Monticello Pump Station Elimination was certified as complete on September 7, 2023.

2.3. CSO LONG TERM CONTROL PLAN (LTCP)

The CSO Long Term Control Plan (LTCP) addresses the overflows and unauthorized discharges from the Combined Sewer System (CSS). Multiple plans have been submitted under this program: the Interim CSO LTCP (approved February 22, 2007); the Final CSO LTCP (approved February 12, 2010); and the most recent revision of the LTCP, submitted May 19, 2021. The approved documents can be viewed on the MSD Project WIN website, msdprojectwin.org. Discharging assets associated with LTCP Projects can be found in Appendix G.

The ACD required LTCP projects to be completed by December 31, 2020. Per Paragraph 38.b.(3) of the 2ACD, schedules for any LTCP project could not extend beyond December 31, 2022. The final LTCP project, which is the Waterway Protection Tunnel, was certified as complete on June 27, 2022. Evaluation of the system will continue through hydraulic modeling, with additional details and Post Construction Compliance Monitoring available in the Annual Report.

2.4. ADDITIONAL EARLY ACTION PLAN (AEAP) PROJECTS

Since entry of the ACD, MSD determined that the conditions and circumstances regarding its assets have changed, thus necessitating the implementation of additional work to meet the objectives of the ACD and to achieve the levels of control for CSOs and SSOs set forth in the approved IOAP. These projects are known as Additional Early Action Plan (AEAP) projects and are described in the 2021 IOAP Modification, which can be viewed on the MSD Project WIN website, msdprojectwin.org. Per paragraph 39 of the 2ACD, MSD is required to implement new AEAP projects as listed in Table 2.1.

The I-64 & Grinstead Infrastructure Rehabilitation and Rudd Avenue Sewer Infrastructure Rehabilitation projects were certified as complete on September 8, 2023. The Prospect Phase II Area Sewers Rehabilitation project was certified as complete on September 11, 2023.

Table 2.1. AEAP Project Estimated Costs

AEAP PROJECT	REQUIRED COMPLETION DATE	IOAP INITIAL ESTIMATE (2021)	CURRENT ESTIMATE OR COST AT COMPLETION	OVERAGE
Nine Critical Interceptors	December 31, 2026	\$70.0M	\$92.7M	\$22.7M¹
<i>Broadway Interceptor Infrastructure Rehabilitation - A19208</i>	<i>June 30, 2021²</i>	<i>\$10.0M</i>	<i>\$24.9M</i>	<i>\$14.9M</i>
<i>Nightingale Rehabilitation - H16074</i>	<i>November 1, 2021²</i>	<i>\$3.0M</i>	<i>\$2.9M</i>	<i>-\$0.1M</i>
<i>Harrods Creek Force Main Repair - A20280</i>	<i>June 30, 2022²</i>	<i>\$8.4M</i>	<i>\$8.8M</i>	<i>\$0.4M</i>
<i>I-64 & Grinstead Infrastructure Rehabilitation - H18503</i>	<i>September 8, 2023²</i>	<i>\$16.0M</i>	<i>\$12.6M</i>	<i>-\$3.4M</i>
<i>Rudd Ave Sewer Infrastructure Rehabilitation - H21019</i>	<i>September 8, 2023²</i>	<i>\$2.3M</i>	<i>\$11.6M</i>	<i>\$9.3M</i>
<i>Prospect Phase II Area Sewers Rehabilitation - H16075</i>	<i>September 11, 2023²</i>	<i>\$3.0M</i>	<i>\$2.0M</i>	<i>-\$1.0M</i>
<i>Buechel Trunk Sewer Rehabilitation - E17053</i>		<i>\$3.0M</i>	<i>\$3.5M</i>	<i>\$0.5M</i>
<i>Large Diameter Sewer Rehabilitation - A20244</i>		<i>\$8.3M</i>	<i>\$7.4M</i>	<i>-\$0.9M</i>
<i>Western Outfall Infrastructure Rehabilitation - H20147</i>		<i>\$16.0M</i>	<i>\$19.0M</i>	<i>\$3.0M</i>
Paddy's Run Pump Station Replacement	December 31, 2026³	\$115M	\$241M	\$126M
Morris Forman WQTC Biosolids Facility	December 31, 2030	\$198M	\$314M	\$116M

1 The total overage for the nine critical interceptors is eligible to count towards Asset Management Commitments and will be evaluated upon completion of all projects.

2 Actual certification date for completed project(s)

3 This project is dependent on partnership and cooperation with the US Army Corps of Engineers (USACE), and as such the deadline may be extended. Unforeseen conditions during construction and USACE permitting/review have contributed to project delays.

2.5. IOAP ACTIVITY SCHEDULE

A Gantt chart including progress of the remaining IOAP projects during the current reporting period and anticipated during the upcoming reporting period can be found in Figure 2.1. Note that progress is represented on the chart as a linear calculation of percent complete in time between preliminary design and substantial completion; however, percent complete in construction is not necessarily linear and project schedule compliance should not be inferred based on visual representation of progress.

SECOND AMENDED CONSENT DECREE
 MID-YEAR STATUS REPORT FY24

SECTION 3: PROGRAM ACTIVITIES FOR NINE MINIMUM CONTROLS

Per Paragraph 37.a. of the 2ACD, the Nine Minimum Controls (NMC) Compliance Report was approved by the KDEP/EPA on February 22, 2007. The approved document can be viewed on the MSD Project WIN website, msdprojectwin.org. A full update of activities under the NMC Program during the reporting period will be given in the Annual Report.

3.1. MORRIS FORMAN WQTC PERFORMANCE

Charts that compare plant flow at the Morris Forman WQTC with the occurrence of CSOs at the Main Diversion Structure and the Southwestern Pump Station are included in Appendix H. As described in Appendix B, reporting for CSO015 and CSO191 have been merged to align with their combined outfall point. In Appendix H, overflows at CSO191 are included in the CSO occurrence reporting for CSO015.

3.2. NMC ACTIVITY SCHEDULE

A Gantt chart including progress of NMC projects during the reporting period can be found in Figure 3.1.

Figure 3.1. NMC Activity Schedule

SECTION 4: PROGRAM ACTIVITIES FOR CAPACITY MANAGEMENT, OPERATIONS AND MAINTENANCE (CMOM)

Per Paragraph 37.b. of the 2ACD, the CMOM Self-Assessment Report was approved by the KDEP/EPA on August 21, 2006. The approved document can be viewed on the MSD Project WIN website, msdprojectwin.org. A full update of activities under the CMOM Program during the reporting period will be given in the Annual Report.

4.1. CMOM ACTIVITY SCHEDULE

A Gantt chart including progress of CMOM projects during the reporting period can be found in Figure 4.1

SECTION 5: PROGRAM ACTIVITIES FOR SEWER OVERFLOW RESPONSE PROTOCOL

Per Paragraph 37.c. of the 2ACD, MSD's initial Sewer Overflow Response Protocol (SORP) was approved by KDEP/EPA on August 22, 2006. The document is updated annually as discussed in Section 5.1. The approved document can be viewed on the MSD Project WIN website, msdprojectwin.org. A full update of activities under the SORP Program during the reporting period will be given in the Annual Report.

5.1. SORP MANUAL UPDATE

MSD is required to review the SORP annually and propose changes as appropriate as a component of the 2ACD Mid-Year Report, and provide updates to the Louisville Regional Office of the Division of Water within 15 days of incorporation of the update. The proposed updated SORP manual is transmitted to regulators under separate cover. Upon this annual review, no changes to procedures are proposed. As part of ongoing maintenance of the report, appendices related to system characterization, organizational structure, documented and suspected overflows, and wet weather inspection routes were updated. References to Top Flight WQTC were removed, and hours for the resources for customer inquiries and dispatching work were updated to reflect current operations. The latest SORP manual is available on MSD's Project WIN website, msdprojectwin.org.

**SECTION 6: PROGRAM ACTIVITIES FOR PUBLIC OUTREACH, EDUCATION,
NOTIFICATION AND PARTICIPATION**

Per Paragraph 36 of the 2ACD, MSD has established a multidisciplinary Wet Weather Team and a program for public information, education, and involvement. This program is described fully in Volume 1, Chapter 3 of the 2021 IOAP Modification. Wet Weather Stakeholder Team meeting minutes, the 2021 IOAP Modification, and public education materials can be viewed on the MSD Project WIN website, msdprojectwin.org. A full update of activities related to public outreach, education, notification, and participation during the reporting period will be given in the annual report.

SECTION 7: PROGRAM ACTIVITIES FOR ASSET MANAGEMENT

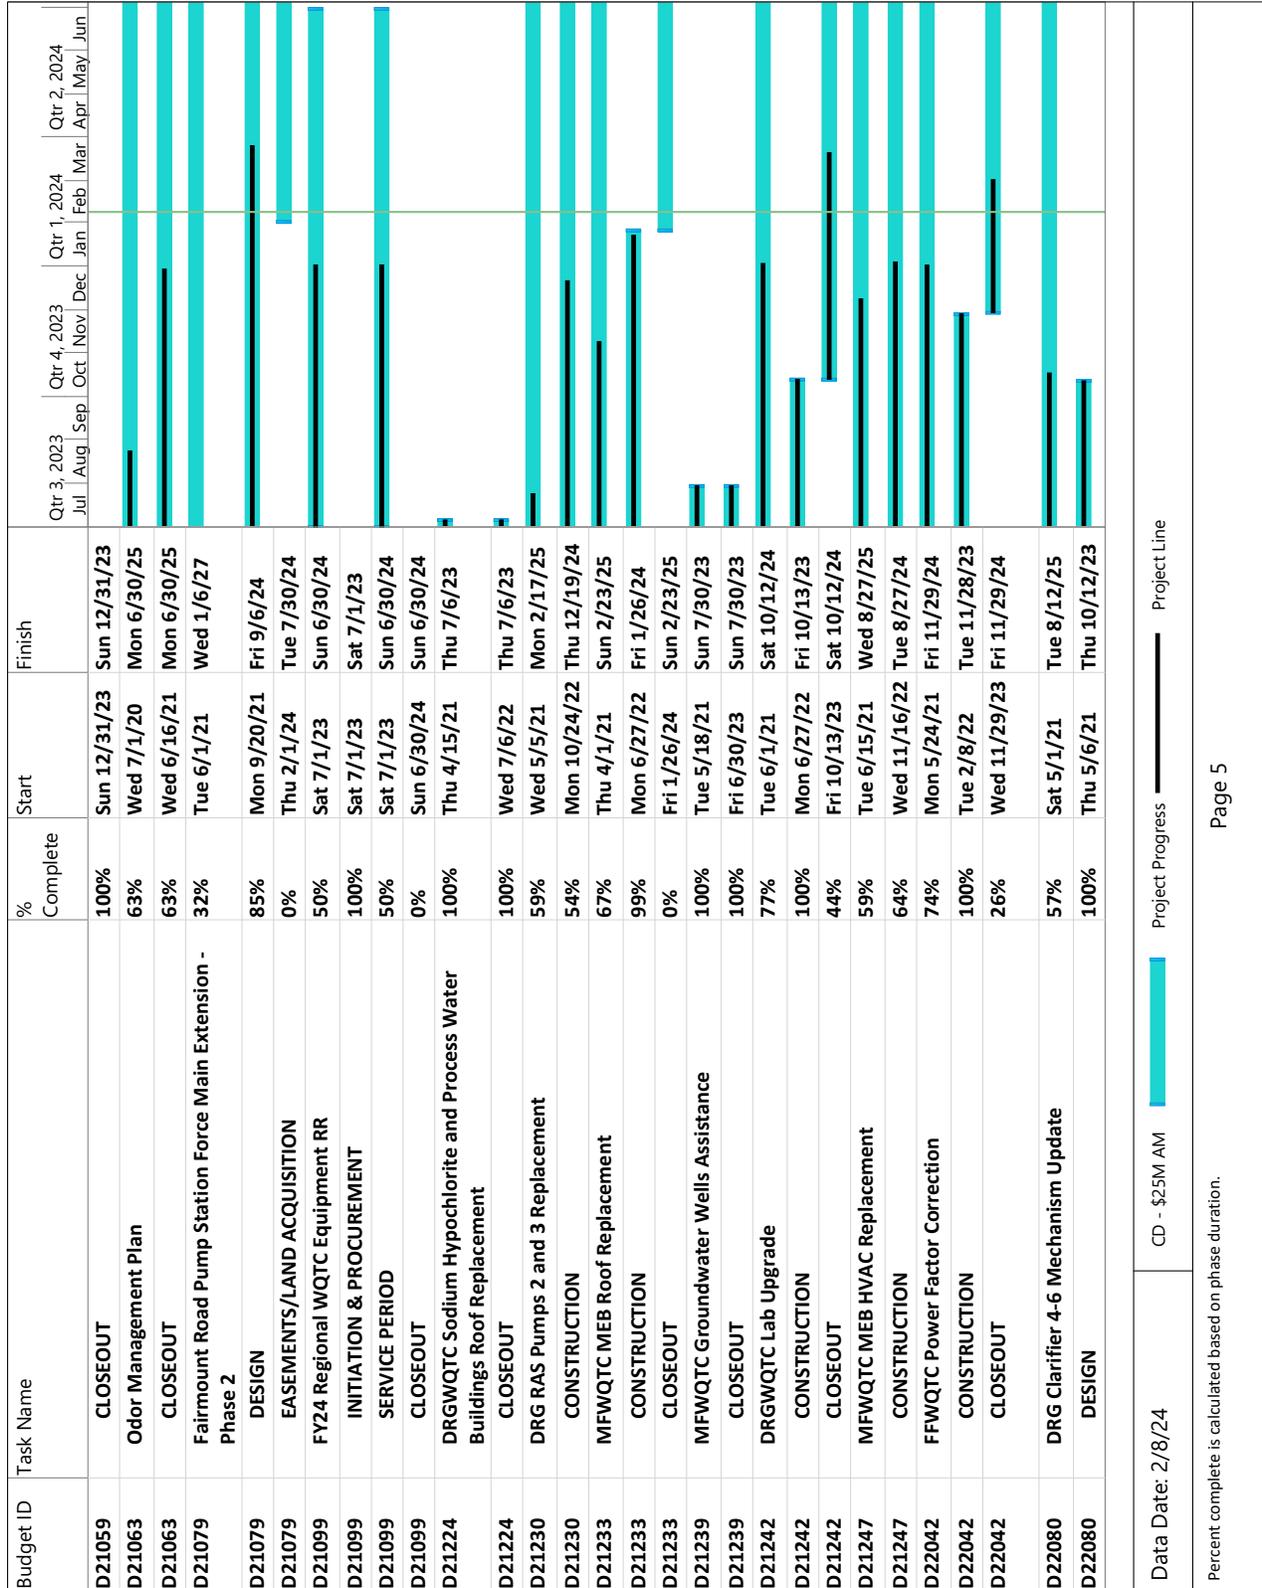

The Strategic Asset Management Plan was submitted to KDEP/EPA for review and joint approval on June 30, 2021, in accordance with paragraph 40 of the 2ACD. This Asset Management (AM) plan is currently under review by KDEP/EPA; the unapproved document can be viewed on the MSD Project WIN website, msdprojectwin.org.

7.1. AM ACTIVITY SCHEDULE

A Gantt chart including progress of AM projects during the reporting period can be found in Figure 7.1.

Per discussion with the EPA and KDEP on September 21, 2022, it was recommended that the Admiral Way solution be included as an Asset Management Program Solution to mitigate capacity issues in the Fishpool Interceptor and address existing overflows at manholes 93703 and 93705 to a 2-year level of control. The Cinderella PS Elimination Minor Modification letter, which can be viewed on the MSD Project WIN website, msdprojectwin.org, describes the relationship between the two projects, and discusses the Admiral Way solution as an Asset Management project. Since then, the project has been included in Appendix G in the Annual Report and the Mid-Year Status Report as the Asset Management Program solution for resolving SSOs at these locations.

SECOND AMENDED CONSENT DECREE
 MID-YEAR STATUS REPORT FY24
 JULY 1, 2023 - DECEMBER 31, 2023

CSO	IOAP APPROVED LEVEL OF CONTROL	MODELED TYPICAL YEAR ACTIVATIONS FOR POST-IOAP CONDITIONS ¹			MODELED TYPICAL YEAR ACTIVATIONS FOR CURRENT CONDITIONS ²			MODELED TYPICAL YEAR ACTIVATIONS FOR PRE-IOAP CONDITIONS		
		VOLUME (MG)	TYPICAL YEAR MODELED TOTAL MINUTES ACTIVATED	TYPICAL YEAR MODELED TOTAL HOURS ACTIVATED	VOLUME (MG)	TYPICAL YEAR MODELED TOTAL MINUTES ACTIVATED	TYPICAL YEAR MODELED TOTAL HOURS ACTIVATED	VOLUME (MG)	TYPICAL YEAR MODELED TOTAL MINUTES ACTIVATED	TYPICAL YEAR MODELED TOTAL HOURS ACTIVATED
		<p>¹Post-IOAP Condition results are based on model simulations of the 2001 Typical Year with the "baseline" projects implemented (Sanitary Sewer Discharge Plan and other existing Combined Sewer System facility improvements) and the most recently completed Long Term Control Plan project model. This model reflects the updated projects included in the 2021 IOAP modification. Modeling results assume Morris Forman WQTC operating at full capacity. The data reflects the construction of the current approved suite of IOAP projects, with some minor modifications to the results based on projected optimization and projected revision of the RTC. Additional revisions to RTC and programming is anticipated as projects are completed and RTC is optimized. Modeling results demonstrate that the system, as currently designed and when operating at full capacity, will perform better than the approved plan. However, this data is provided for information only. The modeling results do not reflect a specific commitment to a set number of activations, cumulative volume or total minutes of overflow at each CSO, nor do they represent a cumulative commitment to residual AAOV. There are no target commitments for number of activations at each individual CSO. The target commitment for the system is based on an 85% capture, resulting in a total residual AAOV of 2,955 MG.</p> <p>²Current Condition results are based on model simulations of the 2001 Typical Year with current upstream SSPP conditions and the current average available treatment plant capacity at Morris Forman WQTC. The model reflects projects certified through June 30, 2023. Partial construction of projects was not included.</p> <p>³Pre-IOAP results are based on model simulations of the 2001 Typical Year with no baseline projects or IOAP projects constructed. Model results reflect calibration modifications to the model that occurred after the onset of the IOAP.</p> <p>⁴These CSOs have been eliminated via implementation of Long Term Control Plan projects.</p> <p>⁵These CSOs were originally modeled or had baseline modeling conditions causing them to activate less than or equal to 8 times per Typical Year and thus do not have an associated project in the approved IOAP. Some were revised later with updated model geometry and were mitigated with CMOM activities.</p> <p>⁶These CSOs were mitigated in conjunction with other CSOs with a control structure (weir or gate) downstream of the original CSO. The new CSO location consolidates the overflow point, and overflows will be reported from a single location.</p>
